MULTILEVEL · CEFR

📖 READING

71 Mock Tests · 2,482 questions

5 parts per test · gap-fill, matching, headings & comprehension
60 minutes per test

B1 · B2 · C1 | Full passages | Full answer keys

PART 1 · PART 2

Fill each gap with ONE word from the text (Q1–6), then match statements to the short texts (Q7–14).

PART 3

Choose the correct heading for each paragraph (Q15–20). There are always more headings than paragraphs.

PART 4 · PART 5

Two longer texts with multiple choice, True / False / No Information and gap-fill sections (Q21–35).

HOW TO USE

Give yourself 60 minutes per test. Write your answers on the answer sheet and check them with the keys at the back.

MOCK TEST 1

📖 READING

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the texts. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

DINOSAUR SOUNDS

There are many movies with dinosaurs making all kinds of noises. However, these **Q1**_____ are just guesses that movie directors make. A new discovery has given scientists a better idea of what dinosaurs sounded like. The **Q2**_____ examined a rare fossil from a dinosaur called an ankylosaur. The **Q3**_____ is 78 million years old. It includes a record of the ankylosaur's voice box. The scientists think the shape of the creature's **Q4**_____ box means it probably made bird-like sounds.

The research was led by a dinosaur researcher at the Fukushima Museum in Japan. He did many tests on the shape of the fossilized voice box. He compared it with the voice box of birds, crocodiles and turtles. He now has an idea of what the voice box muscles looked like. The **Q5**_____ controlled the sounds of the voice box. The research may mean that movies like Jurassic Park got it wrong. Tyrannosaurus rex probably made more of a tweeting sound, like a bird. Hollywood may have to change its scary roars in future dinosaur films to a **Q6**_____ sound.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) Visitor can help to make one particular event a success at this festival.

B) People can listen to local musicians here.

C) At this festival, people can listen to music in lots of different places.

D) It is not necessary to pay for one of the events here.

E) It is possible to stay overnight at this festival.

F) Visitors can get advice here.

G) People can watch craftspeople at work here.

H) Learning what all the different sections of a plant do.

I) Seeing art showing plants from a different part of the world.

J) The possibility of having your work exhibited.

7

From electronics to folk, jazz and classical, this festival is renowned for bringing world-class musicians to this historical city. Starting with a great night of free music, 'Party in the city' this year is going to be no exception.

8

Often referred to as Europe's leading festival for new music, more than 300 bands will perform to around 10,000 people in 30-plus venues, meaning you are sure to see the next big thing in music.

9

The much loved television series Springwatch celebrates the countryside as it does every year, with sheep herding, wood carving demonstrations, insect hunts and more activities, accompanied by live music and a great farmers' market, offering all sorts of mouth-watering produce.

10

Rightly nominated for the best family festival award every year since it began in 2005, this festival offers a combination of different music genres—many featuring artists from around the Wychwood area—and comedy, alongside a selection of outdoor cafes serving amazing world foods.

11

Bringing together a selection of the finest produce, this festival aims to educate visitors about how food should be produced and where it should come from, through sampling a range of tasty treats, cooked on site.

12

The UK's most magical, this is a three-day festival of folk art, live music and fashion shows set in the beautiful wild surroundings of Bodmin Moor. If you don't fancy taking a tent, some local residents usually offer to put visitors up.

13

Featuring demonstrations from world champion dancers and star from the TV series Strictly Come Dancing, the festival promises toe tapping action, including a world record attempt, where everyone is invited to join in.

14

Visit our exciting and colourful exhibition of South American botanical paintings, which brings the continent's exotic and lush plants to life in works from two hundred years ago and from this century.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

List of Headings:

A) Beautiful money
B) Ideal indeed
C) Rose family traits
D) Discovering origins
E) Many choices
F) A flower of luxury
G) A flower of conflict
H) A symbol for all times

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

THE BEAUTIFUL ROSE

I. The rose is the most deeply ingrained flower in human history and human culture. It has been immortalised and integrated into music, festivals, poetry and even wars. It has been used as a sign of passion as well as grief. It is also the sign of human love, given on different occasions. William Shakespeare surely immortalised the rose for the world in 1597, in his play "Romeo and Juliet", when Juliet so passionately said, "What's in a name? That which we call a rose. By any other name would smell as sweet."

II. All species of roses are naturally found throughout the Northern Hemisphere. Some 150 wild species are spread worldwide, from Alaska to Mexico, from Northern Africa to China. All roses are close relatives of cherries, apples, pears, raspberries, and plums. Most species of roses have long been cultivated for their hips, the fruit of the rose flower that has nutritional and medicinal value. A unique characteristic of all species of roses is its ability to bloom over and over again, from early summer to late autumn.

III. The Romans at first believed that the rose was useful as a source of natural medicines. Soon, the beautiful flowers became necessities at Roman festivals. Roman emperors demanded that their baths be filled with rose water, and they reclined on carpets of rose petals during their feasts. Perfumes made from roses became a high-priority treasure for the ruling elite, and it resulted in hardships among the peasant class, who were forced to grow roses instead of cultivating much needed food.

IV. During the 15th century in England, the rose became the symbol of war between two families, both of whom had laid claim to the English crown. The War of the Roses lasted for 30 years and involved the House of York, whose symbol was the white rose, and the House of Lancaster, whose symbol was the red rose. Only in 1486, King Henry VII of the House of Lancaster, who was the first Tudor king, married Elizabeth of York, uniting the families and finally bringing the English civil war to an end.

V. In the 17th century, the rose became so valuable across Europe that it along with rose water was often used as currency. Roses were used to barter in market places across Europe, and commoners could pay their taxes to kings using roses and rose water. Josephine, wife of the Emperor Napoleon Bonaparte, created a great rose garden on the edge of Paris that contained over 200 varieties of the cherished rose. Most of the roses of Europe at that time were shades of pink or white until the early 19th century.

VI. Roses have always been extremely popular all over the world, and fossil records show the presence of ancient roses in the Tertiary Period, which began about 70 million years ago. Where, exactly, first roses appeared is still unknown. It is often believed that roses were probably first cultivated in the royal gardens of ancient China about 5,000 years ago. In Ur, an ancient city of Mesopotamia, 3,000-year-old clay tablets contain the first known written reference about roses growing in gardens of the city.

PART 4

Questions 21–29

Read the following text for questions 21-29.

ICON'S LIFE

Hillary Clinton is certainly the incarnation of the dreams of many American women of her generation. She has got "everything": a family, a fine career, and a husband who not only supports her and approves of what she does, but also allows her to use her talents to the full. Hillary Rodham was born in Chicago in 1947, the daughter of a textile manufacturer. Her family was comfortably off, but not rich; she had two brothers, and her mother did not work.

At school, she was always a brilliant student, though not the kind of girl who spent all her time in her books. On the contrary, she spent a lot of time on outside activities, something which is always greatly appreciated in American schools. It was while she was still at high school that Hillary began to take an interest in social issues, working in the poorer districts of town among immigrant families, and helping them to participate in elections. After graduating from high school, she went on to study at Wellesley College, one of the best universities on the East Coast, where she was elected President of the Students' Union. Photos taken at the time show her as a fairly plump young woman, dressed in rather shapeless clothes, and wearing large glasses. Looking smart was not one of her major concerns.

It was at Yale Law School that Hillary first met Bill Clinton, a good-looking young man who, in spite of his reputation as a dilettante, was actually one of the brightest students in his year. The legend says that Bill finally "noticed" Hillary because she spoke so well. At the time, Hillary was actively involved in the Women's Liberation movement, and seemed to be much more interested in her career than in marriage. When, several years later, she was asked how it was that, after a long-complicated relationship, she finally ended up marrying Bill Clinton, she answered: "Because he was the only guy I dated who wasn't afraid of me!"

Meanwhile, while Bill had gone back to his native Arkansas, intending to follow a career in politics, Hillary became a brilliant lawyer in Washington, where she took part in the famous Watergate hearings. Though several major firms of lawyers asked her to join them, she decided in 1973 to leave Washington and join Bill in Arkansas. They got married in 1975, and Hillary joined a firm of lawyers in Little Rock (the capital of Arkansas). In 1979, at the age of 32, Bill Clinton was elected Governor of Arkansas, becoming the youngest state Governor in the U.S.A. A year later, Hillary gave birth to their daughter Chelsea, named

after a favorite hit song of the 1960's. During Bill's twelve years in office as Governor of Arkansas, Hillary helped him to radically reform the state's public-school system, and establish a school medical welfare system that had no equivalent anywhere else in the United States.

As a solitary concession to the powerful conservative lobby in the Deep South, who were not accustomed to seeing wives working in partnership with their husbands, she agreed to add her husband's name to her own, and be called Hillary Rodham Clinton just to show that she really was married. She also changed her look, began to dress more smartly, did what was necessary and replaced her glasses with contact lenses. She was ready for Washington.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 Hillary was a bright learner at school who .....
A) was busy with trade
B) had good handwriting skills
C) was always busy with social interactions
D) had few friends and reserved

22 She was a fairly chubby young woman.....
A) wearing oversized glasses and formless clothing
B) with reserved character
C) with classical output and hat
D) with looking smart lady

23 Bill had returned to his native Arkansas at the time with plans....
A) to finance his deputy
B) to collaborate with native land
C) to pursue a career in politics
D) to start his new life

24 A program specialized for school medical services was implemented by ....
A) Bill Clinton
B) Hillary Rodham
C) a group of lawyers
D) the governor of Arkansas

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 Hillary and Bill contributed actively in the struggle for women's liberation.
A) True
B) False
C) Not Given

26 Chelsea got her name from a popular 1960s hit song.
A) True
B) False
C) Not Given

27 Bill Clinton rejected to become the youngest state governor in American history when he was appointed governor of Arkansas at the age of thirty-two.
A) True
B) False
C) Not Given

28 At Students Union, Hillary encountered a handsome young man named Bill Clinton for the first time.
A) True
B) False
C) Not Given

29 Every year, the Students Union recognized the most distinguished individuals in the field with scholarships.
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

RODEO

At 1 p.m. the air is still, heavy with a confusion of smells that drifts among the stalls and the barbeques, the animal enclosures and the ice-cream vendors. In the hot midday sun, the fair throngs with visitors, but there's little shade to sit in, just narrow strips of shadow alongside the buildings and the tents. All around, the music is playing while kids run riot and stall-holders beckon passing visitors with their colorful displays. Then, as the time moves towards 2.30, there is a new sense of excitement in the air: people are no longer moving round randomly, but heading in the same direction, towards the dusty arena to the south of the showground. It's almost time for the rodeo! Here at last there is shade for everyone: the grandstand, with its tiered seating, rapidly fills up, as thousands of fair-goers pile in, eager for a good view of the excitement that is soon to begin.

For some people it has already begun. Microlight kids on minuscule ponies are cavorting round the empty arena, while a handful of cowboys impeccably trained horses, walk or trot sedately round the ring. Suddenly a little blonde girl, hardly four feet tall, careers into view, riding bareback at the speed of light on bright white pony. No-one pays much attention. The folk in the stands are too busy talking about horses and rodeo-riders, discussing the last rodeo, predicting the winners of the next. Somehow, as someone who has not been brought up in the company of horses, I feel slightly out of place, as if everyone here except me knows everything about what is going on.

I had been to a couple of rodeos before, including the biggest of them all, Canada's Calgary Stampede; but the other rodeos I had been to were put on for the tourists. Not this one; in central Oregon, there are few tourists. Rodeos here are for the locals, people who know them and understand them; most of the folk round me are from Redmond, or Prineville or Madras or Bend, certainly not from Europe! Then action: suddenly the gates at the end of the arena burst open, and a posse of flag-carrying girls erupts into view, circling the arena in formation on shining dark ponies. Dressed in patriotic red white and blue, courtesy of Pepsi-Cola, the girls come to a stop in the middle of the ring, as the crowd rise to their feet, the men take off their Stetson hats, and everyone joins in the singing of God Bless America.

The rodeo has begun! For the next couple of hours, spectators watch with excitement as local heroes perform feats of dexterity on the backs of bucking animals! While some show their skills at calf roping — catching a running calf with a lasso and tying it up in just a few seconds — others demonstrate their daredevil skills by riding untamed broncos or bounding round on the backs of

enormous raging bulls. As intrepid riders master for all of their wild mounts, the crowd cheer wildly or in apprehension, then burst into laughter as the obligatory clown, the matador of the rodeo, distracts the attention of the raging animals while mounted cowboys round them up and calm them down, coaxing them away into the pens from which they originally emerged, their day's work finished.

Katie Sharpe, 21, the local Rodeo Queen, does a lap of honor, then participates in the ladies' events; but in this macho part of the world, the ladies do not get to pit themselves against untamed bulls and broncos! That's men's stuff! Katie and the other young ladies show their skills at "barrel racing", hurling their horses at breakneck speed round a triangular shaped race-course, marked out with barrels, in the middle of the arena. It's not as dramatic as bull-riding, but it's exciting, and the crowd roar their approval.

As the sun falls lower in the sky and the shadows begin to lengthen, the final rounds of calf-roping and saddle-bronc riding bring another half hour of thrills and spills before the commentator finally announces that the Rodeo is drawing to an end. The last prizes are handed out, the last riders leave the arena, and the show is over. As the spectators pick up their belongings and move slowly towards the exits, the kids on their ponies come back again for another few minutes as imaginary champions, tomorrow's local heroes in the arena of the stars. Here, it seems, if rodeo does not flow in the blood, at least it's all in the family.

Fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

Microlight kids were involved in their lovely sport in an empty arena, whereas horses were trained by **30** _____ around the ring. All young boys standing discussing winners, sharing their ideas with others around the ring came all around the continent except **31** _____. God Bless America was played in the arena by young fellows not wearing their **32**_____ hats, with red white and blue outfits mostly, like brand drinks color. During the rodeo different performance were acted with many spectators by showing their talents to rope calf with a **33**_____ riding untamed bulls and broncs.

Choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **Katie Sharpe, who was the local Rodeo Queen, demonstrated her talents by acting all types of rodeo apart from ....**

A) calf roping
B) saddle-bronc riding
C) triangular shaped race-course
D) dexterity on the backs

35 **Who turns up in the arena when there is a failure with wild mounts?**

A) former cowboys
B) spectators roar
C) clowns
D) rodeo-riders

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

List of Headings:

A) Overcoming problems is part of the challenge of sailing
B) Sailing tends to run in families
C) Enthusiasm about sailing was infectious
D) There's no hiding these sailors' ambitions
E) There's always more you can learn about sailing
F) Some basics about sailing were explained
G) Sailors are used to waiting around
H) These sailors have other talents

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

ROCK THE BOAT

I. The boats, or 'Oppies' as they are affectionately called, were lying bottom-up on the beach, their sails tightly wrapped beside them. 'There's delay,' the race organizer said, pointing at two flags waving in the breeze. He said the red-and white-striped one meant that there was been a delay, while the red, white and blue one meant it would be for three hours.

II. No one looks disappointed, probably because they are accustomed to being ruled by the weather Competitors – casually dressed in baggy shorts, T-shirts, deck shoes and an assortment of anoraks and baseball caps – played on bikes or skateboards or just chatted to kill the time. Spectators sat in groups in the clubhouse, eating rolls and drinking tea.

III. I suddenly felt very pale and 'indoors' as I sat down with some of the tanned, blond champs. Nicky Barnes, 15, Elliot Willis, 14, Eddie Huntley, 13, and Paul Campbell Jones, 14, have been sailing for years, and certainly have the sea in their blood. Paul's dad sailed in the Olympics and Nicky started sailing because her dad dragged her along. 'I was terrified at first,' she confesses. Recently they successfully competed at the world championships.

IV. Varying degrees of hard work go into their preparation, but Nicky does the most. She trains in winter and says it is hard, 'especially when all your friends are out partying'. Then she practices techniques, boat handling and wind strategy. Meanwhile, Elliot had learned how the shape of clouds and hills affects the wind. Eddie is more relaxed and a bit more confident about it: 'I don't like training. I've got better things to do.'

V. They all get on well, joking and teasing each other, but out on the water, competition is fierce. Paul doesn't hesitate to say the best thing about sailing is winning. They've all had nasty moments, but no one will admit to falling in. The boys happily told me of Micky's fear of fish, and Elliot tells a good tale about his boat being hit by a shark.

VI. So what are their plans? 'I want to be world champion,' says Nicky without hesitation. Paul agrees: 'I want to go to the Olympics like my dad.' Elliot and Eddie share similar dreams. For now, though, they're content to wait for the wind to pick up so they can get back on the water and do what they love most.

PART 4

Questions 21–29

Read the following text for questions 21-29.

PERSONALITY AND HEALTH

There is increasing evidence that health is linked to personality. However, until now, the relationship has not affected the way health care is delivered. There are several reasons for this. Some health workers doubt whether there is a direct link between health and personality or whether it's just a coincidence. Some feel it is their professional duty to treat all patients in the same way. Others argue that delivering health services according to behaviour, for instance, has been found in some studies to increase the risk of death, in others to protect people from illness and in others to have no link to health at all. patients' personalities will have minimal impact and therefore isn't worth the effort.

However, some psychologists believe that applying different procedures to people with different personalities could have a significant, positive effect on health. Research into personality has, in recent years, focused on the Big Five model of personality types. This model measures how neurotic, extrovert, open to experience, agreeable and conscientious a person is. Some of these personality types have been studied in relation to health. For example, conscientious people tend to be less likely to smoke, drink too much alcohol or be inactive. However, in other cases, the relationship is less clear.

Neurotic

Even so, if health workers applied an understanding of personality to the services they provide, they could influence the extent to which patients act on advice and follow their treatment. For example, high sensation-seeking individuals, who are extroverts and unconscientiously in the Big Five model and tend to take part in risky activities, respond to drama, energy and emotion. Thus, to encourage those people to follow health advice, health promotions can be designed to incorporate those factors. An example of this was the campaign SENTAR which aimed to reduce cannabis use among high sensation-seeking teenagers. By creating a suitable television advert, they successfully engaged these youths and reduced their recreational drug use. Of course, this approach isn't always possible. It is often impractical and expensive to create several versions of a campaign to reach different personality types. However, recent developments in computer technology, cookies and targeted advertising may allow this approach to be used more in future.

Personality could also be considered when sending messages, information and guidance to specific patients. Already, health information is usually available in various forms-printed, digital, audio, and so on - to be suitable and accessible for different users, such as the blind, the elderly, and people with reading difficulties. Research has also shown that, by identifying

different patients' motivations for treatment and then corresponding with them in a way that reflects their motivations, patients will become more involved in their treatment, compared to when the same messages are sent to everyone. Correspondence could, therefore, be adapted to reflect patients' personality type, too. For example, less conscientious people could be sent phone reminders to attend appointments. So far, there has been very little research into the effectiveness of tailoring health guidance according to personality, so this area deserves further study.

Until now, the focus of personality-health research has been to explore the link between personality and health and has had very little practical application. Thus, health workers have not engaged deeply with it. However, by suggesting, trialing and implementing practices to engage patients with different personalities, the relationship between psychology researchers and health workers could improve, along with the health of the general public.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 Who is the article most aimed at?

A) psychologists
B) patients at a clinic
C) neurotic people
D) health workers outside psychology

22 Which of these is NOT a reason why clinicians do not currently consider personality in their approach to healthcare?

A) They consider it their duty to treat all patients equally.
B) They think the effect on a patient's health will be hardly noticeable.
C) They lack sufficient training in psychology.
D) They doubt whether a person's personality directly affects their health.

23 What can be concluded from the text about neurotic patients?

A) They are at greater risk from early death than non-neurotic patients.
B) There is no consistent link between a patient's level of neurosis and their health.
C) Their neurosis protects them from becoming sick.
D) They are more likely than non-neurotic patients to report illness.

24 It can be inferred that the campaign SENTAR...

A) used drama and energy in its design.
B) failed to reduce cannabis use among teenagers.
C) was designed to attract conscientious, high sensation-seeking teenagers.
D) was delivered across multiple media, including television and online.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 The correlation between health and personality has always been taken into account in the health care system.

A) True
B) False
C) Not Given

26 Some doctors believe that it is inefficient to treat patients depending on their personalities.

A) True
B) False
C) Not Given

27 There are controversial opinions about the effect of neurotic behavior on health.

A) True
B) False
C) Not Given

28 SENTAR campaign predicted a positive impact of their promotion on reducing drug use among teenagers.

A) True
B) False
C) Not Given

29 Understanding health information can be difficult for disabled people.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

PLUTONS AND DISEASE

Sometimes there is a common cause for apparently different illnesses. Take for instance various kinds of tumors, which are groupings of cells continuously separating. And lately, a spectacular medical theory has developed. It speculates how illnesses of the central nervous system-such as Lou Gehrig's disease, AIDS and rubella - use a similar process of reproduction.

The theory replaces the idea of continuous re-creation with the idea that the body does not remove its own waste properly. Normally, the cause of these diseases is mishandled plutons. What keeps the system busy, is the process of collecting the waste of healthy cells. Carrier cells pick up the waste as they travel through the blood stream and deposit it in waste depots. Healthy cells create plenty of junk that keep the system busy. The process includes compressing the waste by the means of folding. This can be a lengthy process and with so many steps, that an error is likely to occur. In such a case, the waste must be removed before it causes damage to any serious degree.

In a recent issue of the Pacific Rim Journal of Medicine, Al Chervik of Tokyo Medical School, who helped discover the proteasome 20 years ago, explained the process of the biological waste-disposal system when the brain is infected by a particularly nasty, communicable protein called a pluton. Plutons cause Kluziod-Johan disease (or "wasting disease" in deer) by reorganizing the structure of normal proteins in their own image. Dr Chervik proposes that small groups of plutons penetrate the waste-processing proteasome and cease the cellular garbage disposal. Waste material would remain in the brain and the accumulating toxins would kill the nerve cells.

Experimentations on how plutons disrupt nerve cells have revealed the transformation of the brain into a semi-hard substance. The astonishingly young Janice Laub of Ripon College, was successfully able to demonstrate this process by using a Petri dish of mouse nerve cells and an incandescent reading

lamp. Her results clearly showed how the cells had been transformed to a waste acid.

The whole process began with Laub administering a deadly substance to the nerve cells with disease-causing plutons. This caused the cells to degrade quickly and create a loose inner core. The plutons passed though the cells skin, then gathered in bunches and liquidated the center. She then administered an antidote that isolated the accumulated plutons, but left the cell's essential components. The hypothesis was proven as the cell regained its faculties and was able to begin removing waste.

Living pelicans were used in a separate experiment, and similar results were proven. When the pelicans were infected with plutons, toxins collected in their brains. The toxin was connected to amino acids slated for disposal. However, once the plutons had entered the brain, the garbage managed to remain.

Laub's results support the hypothesis that brain cells are motivated by plutons to make long latent viruses come back. She further speculated that these viruses might even carry plutons to other nerve cells, spreading the infection and causing even greater damage to other parts of the brain. If that idea proves correct, plutons would provide many answers to tumor creation.

Fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

The waste which is generated in the **30** _____ cells is later collected by another cell responsible for delivering it in depots.

It is not surprising to observe an **31** _____ due to the complex and long-lasting process of waste removal.

The findings of Ripon's research demonstrate that plutons played an essential role in converting the cells into an **32** _____.

Apart from the mouse, **33** _____ were also applied in an observation to provide evidence on the direct impact of plutons on the collection of toxins in the brain.

Choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **The basis of the new theory is...**

A) the waste handling mechanisms of the cells.
B) the continuous reproduction of cells.
C) called plutons.
D) the importance of keeping the body busy.

35 **An error is likely to occur, because...**

A) the process takes a long time.
B) the process is difficult.
C) it is bound to happen.
D) plutons cause damage before they are handled.

GOING TO THE MALL

Every city in the USA has a mall or four. There are about 1,100 malls in the US. These giant store-filled buildings are one of America's greatest **Q1**_____ options for teens and families.

Mall of America in Minnesota is the largest **Q2**_____. It is so big that it has a park in it, Nickelodeon Universe, with several roller coasters! There are more than 500 stores in it, about 400,000m2 and about 12,000 people work there.

But malls nowadays aren't the same as they used to be in the 80s and It is so 90s. During those decades, **Q3**_____ would go to the mall and spend hours shopping, playing video games at the arcade, or just hanging out with friends. It was cool in the summer and warm in the winter. In those days, malls provided the perfect source of **Q4**_____ and entertainment for entire **Q5**_____

But some experts believe in upcoming **Q6**_____ malls will be replaced by online shopping.

PART 2

Questions 7–14

Read the texts and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) Your parents want to spend a holiday in the countryside not far from London.

B) You are a cook and are looking for a job with accommodation in a small hotel.

C) You want to do catering training in England.

D) You must reserve the room 1 week in advance.

E) You and your partner are looking for catering jobs where you can live together in one place.

F) You may drink special alcoholic beverages there.

G) You will provide a feedback letter from your previous jobs to apply in the fish food restaurant.

H) You have been asked to find a hotel with facilities for large meetings and dinners.

I) You want to buy a hotel in city center.

J) A friend wants to spend a holiday learning to handle a small boat.

7

The Grand Conference Hotel

Located in the heart of the business district, our hotel offers state-of-the-art conference facilities. We have 5 meeting rooms capable of hosting up to 500 delegates, plus our magnificent ballroom perfect for gala dinners and corporate events. Full catering services available for all functions.

8

Seaside Fish Restaurant

We are seeking an experienced chef to join our award-winning team. Must have at least 3 years' experience in seafood cuisine. References from previous employers essential. Accommodation not provided but we can assist with finding local housing.

9

Mountain View Lodge

Husband and wife team required to manage our remote highland retreat. Live-in position with private apartment. Duties include cooking for up to 20 guests and general hospitality management. Previous hotel experience preferred.

10

Cotswold Country Retreat

Escape to our charming farmhouse B&B, just 90 minutes from central London. Surrounded by rolling hills and picturesque villages. Perfect for those wanting to explore the beautiful English countryside while still being close to the capital.

11

Westminster Culinary Academy

Professional catering courses for all levels. From basic food hygiene to advanced chef diplomas. Our London campus offers hands-on training in our fully equipped kitchens. Evening and weekend classes available for working professionals.

12

Highland Whisky Inn

Traditional Scottish pub and guesthouse. Sample our collection of over 200 single malt whiskies from distilleries across Scotland. Cozy rooms with Highland views. Live folk music every Saturday night.

13

Coastal Sailing School

Learn to sail in beautiful Cornwall! Week-long residential courses for beginners. Master dinghy sailing and small yacht handling. All equipment provided. Accommodation in our seaside hostel included in course fee.

14

The Rose & Crown Inn

Historic village pub seeking experienced cook. Live-in position available with private room above the pub. Cooking traditional English food for our restaurant serving up to 40 covers. Must be able to start immediately.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Environmental change has always been with us.
B) Rivers and seas cause damage.
C) What is water?
D) A pessimistic view of the future.
E) Disasters caused by the climate make us feel better.
F) How to solve flooding.
G) Humans' relationship with water.
H) The destructive force of water in former times.

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

WATER AND CLIMATE CHANGE

I. Water is the giver and, at the same time, the taker of life. It covers most of the surface of the planet we live on and features large in the development of the human race. On present predictions, it is an element that is set to assume even greater significance.

II. Throughout history, water has had a huge impact on our lives. Humankind has always had a rather ambiguous relationship with water, on the one hand receiving enormous benefit from it, not just as a drinking source, but as a provider of food and a means whereby to travel and to trade. But forced to live close to water in order to survive and to develop, the relationship has not always been peaceful or beneficial. In fact, it has been quite the contrary. What has essentially been a necessity for survival has turned out in many instances to have a very destructive and life-threatening side.

III. Through the ages, great floods alternated with long periods of drought have assaulted people and their environment, hampering their fragile fight for survival. The dramatic changes to the environment that are now a feature of our daily news are not exactly new: fields that were once lush and fertile are now barren, lakes and rivers that were once teeming with life are now long gone; savannah has been turned to desert. What perhaps is new is our naive wonder when faced with the forces of nature. Today, we are more aware of climate change around the world.

IV. Floods in far-flung places are instant news for the whole world. Perhaps these events make us feel better as we face the destruction of our own property by floods and other natural disasters.

V. In 2002, many parts of Europe suffered severe flood damage running into billions of euros. Properties across the continent collapsed into the sea as waves pounded the coastline wreaking havoc with sea defences. But, it was not just the seas. Rivers swollen by heavy rains and by the effects of deforestation carried large volumes of water that wrecked many communities.

VI. Building stronger and more sophisticated river defenses against flooding is the expensive short-term answer. There are simpler ways. Planting trees in highland areas, not just in Europe but in places like the Himalayas, to protect people living in low-lying regions like the Ganges Delta, is a cheaper and more attractive solution. Progress is already being made in convincing countries that the emission of carbon dioxide and other greenhouse gases is causing considerable damage to the environment. But more effort is needed in this direction.

PART 4

Questions 21–29

Read the following text for questions 21-29.

CRY-BABY

It was almost midnight before they got around to giving the Oscars to the really well-known personalities.

At first a series of guest stars had awarded the prizes: to the best designer, to the best special-effects man, for the best technical invention for motion pictures during the year, and to all the other people, so unknown outside the industry, but so significant within it.

I looked around the theatre, recognizing most of the weighty faces in the business, but not caring much.

You see, I was pretty nervous. Myra Caldwell, whom I had brought to the ceremony, was sitting there beside me, and right across the aisle was Joan Weyland. Now, to get the picture properly, you have to remember that during that particular year Myra had played the sensational supporting role in The Devil Loses and had been called the greatest find in the history of pictures. But that was the same year that Joan Weyland had stolen a big picture called Calumet Centre right out from under the nose of one of the most famous female stars in the industry. The only other actress nominated was not given much chance. Now in a few minutes, they were going to announce who had won the Oscar for the Best Supporting Actress of the year. It was the hottest Contest and everybody was aware of it. Furthermore, it was no secret that the two leading contestants would be delighted to boil each other in oil win, lose, or draw. And here they were across the aisle from each other. Do you get why I was nervous?

Then the lights went down. They were going to run short scenes from the pictures for which the actors and actresses had been nominated. The supporting-actress pictures were coming on, and here was Joan Weyland in her grand scene from Calumet Centre. The audience started to applaud as soon as they saw her. After that they ran a short episode from Whirlwind showing the other nominee, a refugee actress called Tanya Braden. I had

never seen the picture of the actress, and the picture hadn't made much money, but there was no doubt she could act! She played the star's mother and she made you believe it.

Then they ran Myra's big moment in The Devil Loses. After it was over, tried to guess who had the biggest chance. "I think I won," Myra said to me. The lights went up. The old actor, who had won the Supporting Actor award the year before, came through the curtains and prepared to present the award. I didn't see how I was going to live through the next few minutes. He got the envelope and began opening it very slowly. He was loving every second of it, the old man. Then he looked at the little piece of paper. "The Winner," he said, then paused again, "is Miss Tanya Braden, for her performance in Whirlwind."

Well, I'm not too sure about the sequence of events that followed. I don't remember the applause, because Joan let out a loud cry from across the aisle that drowned out everything else. Then Myra started to cry. I don't mean cry like the ordinary person, but I mean cry so that the building shook. Then Joan jumped to her feet and started out, and her mother accompanied her. But I couldn't do anything with Myra. The show was interrupted and the whole theatre was staring at her. I picked her up and carried her out. It wasn't a very pleasant performance, but I think there is some excuse. After all, Joan is 8 years old, and Myra is only 6, and she isn't used to being up so late. I'm a little on her side anyway. And why not? I'm her father.

For questions 21-24, choose the correct answer A, B, C, or D.

21 **At the beginning of the Oscar ceremony prizes were awarded**

A) to the most famous stars among the winners.
B) to the best director.
C) for the best film.
D) to the secondary members of shooting crews.

22 **Joan Weyland and Myra Caldwell were present at the ceremony because they**

A) had both played in one film which had an Oscar nomination.
B) had been nominated as two of the Best Supporting Actresses of the year.
C) wanted to see the well-known personalities of the film industry.
D) accompanied the nominees.

23 **The narrator describes the relations between Joan and Myra as**

A) friendship.
B) rivalry.
C) sympathy.
D) partnership.

24 **The narrator liked the performance of the third nominee, Tanya Braden, because she**

A) played her part very convincingly.
B) was very beautiful.
C) was a well-known actress.
D) played as a partner of a world-famous star.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **Usually, everybody could recognize easily the winners of the Oscars.**

A) True
B) False
C) Not Given

26 **The Devil Loses was the first role of Myra in the film industry.**

A) True
B) False
C) Not Given

27 **Tanya Braden was supposed to have very little probability to win the Best Supporting Actress.**

A) True
B) False
C) Not Given

28 **Whirlwind was so successful in terms of generating much budget.**

A) True
B) False
C) Not Given

29 **The author could remember exactly what happened after announcement of the winner.**

A) True
B) False
C) Not Given

PART 5 — Questions 30–35

Read the following text for questions 30-35.

CALIFORNIA'S EARTHQUAKE THREAT

California may be in danger of losing its major cities. Several along the coast were built upon a dangerous section of fault line known for ferocity and speed. Some faults can send earthquakes zooming along the ground faster than the speed of sound, scientists say—and California's San Andreas Fault may be one of them. Most earthquake faults "unzip" at around 3 kilometers a second. But evidence is growing that some faults can send quakes zooming much faster—up to 6 kilometers a second. "They are moving faster than the speed of sound, like a sonic boom," said Reah Kapur, a seismologist at Wentworth University in the U.K.

These hasty earthquakes cause much more damage on the ground and are more likely to topple buildings, snap bridges, and crinkle highways than regular upheavals. Now it turns out that the San Andreas Fault may be one of these earthquake "superhighways." It has taken Kapur nearly 30 years to prove their existence because superfast earthquakes are rare. But on February 12, 2006, a magnitude 7.6 earthquake struck the Khatota coastal region of Madagascar. That quake unzipped over 500 kilometers of fault, providing the long-awaited opportunity.

Kapur and her colleagues, by studying the seismic activity, have been able to map out the earthquake's trek. "The quake started slowly, but then accelerated to speeds of a super shear-wave speed, traveling for more than 100 kilometers at a speed of nearly 6 kilometers per second," Kapur said. Kapur and

colleagues also realized that the fast section of the Madagascar fault happened to be very long and straight, like a true beam. "When a fault has curves and bends in it, then the earthquake slows," Kapur said. "But on a long straightaway, it can reach breakneck speeds."

Theories are now abound concerning the reason for the colossal damage caused by California's 1904 earthquake. "Directly beneath San Francisco is a long straight section," Kapur said. Efforts are underway to effectively utilize this information. "Much can be done to ensure buildings can cope with the higher frequencies of a faster wave," said Lacy Underawl, a seismologist at Nebraska State University, who wasn't involved in Kapur's work. "New buildings can be built on balls and located on bedrock rather than soft sediments," she added.

San Francisco isn't the only major city at risk. Further down the San Andreas Fault, another section of "freeway" exists underneath the Carrizo Plain down to the Baja Peninsula. Kapur and colleagues say, "As an earthquake moves along this section it is likely to send out shock waves in front, which may focus on cities like Modesto, Santa Cruz, and Los Angeles, some of the most densely populated parts of California," Kapur said. In a presentation to the National Academy of Subterranean Associates, Kapur outlined the need to classify all the world's fissures according to their probable earthquake speed. She believes that communities can be better prepared if faults are better categorized.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

Rapid earthquakes may lead to more damage than upheavals since they can destroy constructions and **30** _____ main roads.

The earthquake which occurred in Madagascar was a good **31** _____ for Kapur and her colleagues for observing the seismic activity more deeply.

Underawl advised that it is not suitable to locate new constructions on **32** _____.

Kapur mentioned that categorizing fissures in the world is so beneficial for **33** _____ because it allows them to be ready for possible faults.

For questions 34-35, choose the correct answer A, B, C, or D.

34 The major cities of California are in danger, because...

A) the earthquakes are too frequent in the region.
B) a number of them are located above faults.
C) the faults are ferocious and zoom faster than sound.
D) San Andreas is an active fault.

35 The seismic activity....

A) has to reach 7.6 to be a superfast earthquake.
B) reached the 100 km per minute speed in the Khatota region.
C) changed speed and became a superfast earthquake.
D) studies helped Kapur predict where to expect the earthquake.

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

List of Headings:

A) Theatre and politics
B) Ladies enter
C) Origin of theatre
D) Not the least important
E) Varieties of theatres
F) Stars for a repertoire
G) A step to a wider variety
H) Modern problems

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

WESTERN THEATRE

I. Modern Western theatre comes in large measure from ancient Greek drama, from which it takes technical terminology, classification into genres, and many of its themes, stock characters, and plot elements. The Greeks also developed the concepts of dramatic criticism, acting as a career, and theatre architecture. The theatre of ancient Greece consisted of three types of drama: tragedy, comedy, and the satyr play.

II. Western theatre developed and expanded considerably under the Romans. The Roman historian Livy wrote that the Romans first experienced theatre in the 4th century BC. The theatre of ancient Rome was a thriving and diverse art form, ranging from festival performances of street theatre, nude dancing, and acrobatics, to the staging of broadly appealing situation comedies, to the high-style, verbally elaborate tragedies.

III. Theatre took on many different forms in the West between the 15th and 19th centuries, including commedia dell'arte and melodrama. The general trend was away from the poetic drama of the Greeks and the Renaissance and toward a more naturalistic prose style of dialogue, especially following the Industrial Revolution. Theatre today, broadly defined, includes performances of plays and musicals, ballets, operas and various other forms.

IV. The eighteenth century in Britain introduced women to the stage, which would have been extremely inappropriate before. These women were looked at as celebrities but on the other hand, it was still very new and revolutionary that they were on the stage and some said they were unladylike and looked down on. Charles II did not like young men playing the parts of young women, so he asked that women play their own parts.

V. Theatre took a big pause during 1642 and 1660 in England because of Cromwell's Interregnum. Theatre was seen as something sinful and the Puritans tried very hard to drive it out of their society. Because of this stagnant period, once Charles II came back to the throne in 1660, theatre (among other arts) exploded because of a lot of influence from France, where Charles was in exile the years previous to his reign.

VI. Stagecraft is a term referring to the technical aspects of theatrical, film, and video production. It includes constructing scenery, hanging and focusing of lighting, design and procurement of costumes, makeup, props, stage management, and recording and mixing of sound. Considered a technical rather than an artistic field, it is equally crucial for the practical implementation of a designer's artistic idea.

PART 4

Questions 21–29

Read the following text for questions 21-29.

SNAKES

Snakes are elongated, legless, carnivorous reptiles that can be distinguished from legless lizards by their lack of eyelids and external ears. Many species of snakes have skulls with several more joints than their lizard ancestors, enabling them to swallow prey much larger than their heads with their highly mobile jaws. To accommodate their narrow bodies, snakes' paired organs (such as kidneys) appear one in front of the other instead of side by side, and most have only one functional lung.

Living snakes are found on every continent except Antarctica, and on most smaller land masses, exceptions include some large islands, such as Ireland, Iceland, Greenland, the Hawaiian archipelago, and the islands of New Zealand, and many small islands of the Atlantic and central Pacific oceans. Additionally, sea snakes are widespread throughout the Indian and Pacific Oceans. More than 20 families are currently recognized. They range in size from the tiny, 10.4 cm (4.1 in)-long thread snake to the reticulated python of 6.95 meters (22.8 ft) in length. The fossil species Titanoboa cerrejonensis was 12.8 meters (42 ft) long. Snakes are thought to have evolved from either burrowing or aquatic lizards, perhaps during the Jurassic period.

Venom

Most species are nonvenomous and those that have venom use it primarily to kill and subdue prey rather than for self-defense. Some possess venom potent enough to cause painful injury or death to humans. The colloquial term "poisonous snake" is generally an incorrect label for snakes. A poison is inhaled or ingested, whereas venom produced by snakes is injected into its victim via fangs. It is worthwhile noting that certain birds, mammals, and other snakes (such as king snakes) that prey on venomous snakes have developed resistance and even immunity to certain venoms. Nonvenomous snakes either swallow prey alive or kill by constriction.

Feeding and diet

All snakes are strictly carnivorous, eating small animals including lizards, frogs, other snakes, small mammals, birds, eggs, fish, snails or insects. Because snakes cannot bite or tear their food to pieces, they must swallow prey whole. The body size of a snake has a major influence on its eating habits. Smaller snakes eat smaller prey. Juvenile pythons might start out feeding on lizards or mice and graduate to small deer or antelope as an

adult, for example. After eating, snakes become inactive while the process of digestion takes place.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 Snakes differ from reptiles by the absence of
A) legs and bones
B) jaws and heads
C) outer ears and eyelids
D) skins and legs

22 What does "paired organs" mean about snakes?
A) their double organs stay one behind the other.
B) their lung is in front of a kidney.
C) their heart and kidney are side by side.
D) legs are situated close to the kidney.

23 Titanoboa cerrejonensis
A) lived in the past
B) lived in the sea
C) looked like lizards
D) was 42 meters long

24 Kingsnakes
A) swallow preys alive
B) has immune against other snakes venom
C) don't eat mammals
D) cannot eat other snakes

For questions 25-29, decide if the following statements agree with the information given in the text.

25 Snakes can be found everywhere in the world.
A) True
B) False
C) Not Given

26 Some living snakes may be 12.8 meters (42 ft) long.
A) True
B) False
C) Not Given

27 Not all species kill their preys using venomous bites.
A) True
B) False
C) Not Given

28 Young python feed on only mice and lizards.
A) True
B) False
C) Not Given

29 Snakes don't eat other prey while digesting a recently eaten animal.
A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

SAN FRANCISCO

The San Francisco of today has a rich and colorful history, starting in 1776, when it was founded by colonists from Spain, through The California Gold Rush of 1849, to being rebuilt after the 1906 earthquake and fire. In all this time it has seen some dark days, but none darker than the present. It became famous as the home of technology with its Silicon Valley, and the relationship the city has with this industry is the cause of all the pain, because of a proposal to levy a 'tech tax' on the companies that have fueled the city's transformation into a place that is increasingly uninhabitable for people on low or medium incomes.

Under the plan, large tech employers in the city, potentially including Google, Twitter, Uber, Airbnb and Salesforce, would be required to pay a 1.5% payroll tax. The estimated $120 m in annual revenue would be used to fund affordable housing and services for the city's large homeless population - 57.4% of homes there are worth more than $1 m, but hundreds of people sleep in tents on the street every night.

The rapid tech boom in the city threatens its ability to thrive and prosper because every week brings new outrages, whether it's the tenant in North Beach who, it emerged this week, received a notice informing him that his rent was increasing from $1,800 a month to $8,000, or the kindergarten teacher whose building was bought by two tech workers and, it was revealed this month, is now facing eviction for nuisance violations that include using appliances.

The city is deeply divided politically between technological evangelists who believe passionately in an industry that has spurred the local economy and made the already rich even richer, and others who believe the sector's recent encroachment into the city is responsible for erasing the city's rich culture and sparking a housing crisis. Meanwhile, more than a few tech workers have gained viral notoriety for anti-homeless screeds, such as a February 2016 open letter that included the complaint, 'I shouldn't have to see the pain, struggle, and despair of homeless people to and from my way to work every day'

A seminal moment came in 2011, when homegrown Twitter threatened to decamp somewhere cheaper and more business friendly. The city responded, first by offering a payroll tax break to companies like Twitter that located in its rundown Central Market neighborhood, and then by phasing out the payroll tax altogether and replacing it with a gross receipts tax-a popular change for tech companies that often have large workforces before they have any revenue.

The companies that took advantage of San Francisco's tech-friendly incentives were, back then, just getting started. Today, that same stretch of the city, where Twitter put down roots, now hosts companies (Uber, Spotify, Dolby, Square, Zendesk, Yammer) whose valuations collectively approach $100 bn. Silicon Valley natives like Google, Linkedin, and even Apple are rapidly expanding into the city too.

The tech tax would partially turn back the clock, bringing back the 1.5% payroll tax, but only for tech companies. But surprisingly, the proposal has met with fierce resistance. The city's tech, political, and media establishment have savaged the proposal, and its mayor called it a 'job-killing measure that would 'return this city back to the days of the Great Recession' The San Francisco Chronicle called the tax 'a dangerously dumb idea' that is 'profoundly reckless and self-defeating'.

Fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

Technological **30** _____ is seen as an essential reason for most problems that local people are experiencing in San Francisco.

The money generated from imposing a tax on the employers of big companies is usually used to support **31** _____ people.

The author claims that high technological development in the city **32** _____ the opportunities for the city to flourish and make progress.

The government of San Francisco offered several **33** _____ which were applied for encouraging even new technological companies.

For questions 34-35, choose the correct answer A, B, C, or D.

34 **What, according to the writer, are the objectives of the people who advocate this plan in the second paragraph?**

A) To raise enough money to build homes for the homeless.
B) To finance community projects.
C) To pay for keeping homeless people away from the tech area.
D) To pay the homeless to move to another city.

35 **Why, as the writer suggests in the sixth paragraph, did the city levy a receipts tax rather than a gross payroll tax in the past?**

A) Because startups had large numbers of employees but limited sales.
B) Because the city wanted to encourage investment.
C) Because the city wanted to encourage the development of a rundown area.
D) Because the city wanted to reduce unemployment.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

ELECTRIC CARS

Car makers are spending a lot of money on electric cars. In the future, electric **Q1**_____ will replace petrol cars. Environmentalists believe this will reduce the amount of CO2 put into the atmosphere. A big problem for **Q2**_____ cars is charging the battery. Some batteries in today's electric cars can take up to 12 hours to charge fully. However, a company in Israel says it has created a lithium-ion battery that people can **Q3**_____ in just five minutes. This is the same amount of time it takes to fill a tank of gas with petrol. The new lithium-ion **Q4**_____ were developed by the Israeli company StoreDot. They are being manufactured by a Chinese company called Eve Energy.

The new batteries could totally transform driving. They would mean electric cars would be able to travel as far as **Q5** _____ cars. Many people with electric cars today suffer from "range anxiety". This is stress caused by worrying about the battery running out of electricity. A StoreDot spokesperson said: "You're either afraid that you're going to get stuck on the highway, or that you're going to need to sit in a charging station for two hours." The new batteries would end this anxiety. The StoreDot **Q6**_____ said: "We're at the point of achieving a revolution in the electric vehicle charging experience". He said it means the switch from petrol to electric cars will happen much faster.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You can go somewhere nice in a year.

B) You can meet up with a lot of famous people there.

C) You can choose your work time.

D) They can accept a person with a diploma with no prior experience.

E) They are looking for a hotel manager.

F) You can work and learn simultaneously there.

G) You have to work there all week.

H) They will give you a car if you want to work there.

I) You can get an insurance for your teeth there.

J) You don't have to go there to work.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Another name for inhabitants.
B) A returned house.
C) The emblem.
D) Local life.
E) A cheap electricity.
F) Education system.
G) Foreign involvement.
H) A violent war.

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

FALKLAND ISLANDS

I. About 250 miles off the coast of South America lie the Falkland Islands, a British overseas territory. About 3,000 people live on the islands. Like most isolated communities around the world, they are always pleased to welcome tourists. The people of the Falkland Islands mostly work in sheep farming and fishing.

II. Everything outside Stanley, known locally as Camp, is home to numerous farms and settlements spread across the islands. In fact, over three quarters of the population live in Stanley. Although one of the smallest capitals in the world, Stanley provides a variety of supermarkets, excellent restaurants and hotels, a swimming pool, gym and golf course.

III. Open whenever tour ships are in the port, the Falkland Islands Museum contains artifacts from everyday life, natural history samples and a fine collection relating to the islands' shipwrecks. Outdoor exhibition sites include the Reclus Hut, originally made in Stanley, then shipped to Antarctica and set up there in 1956. Forty years later the famous house was brought back.

IV. There are only about 380 children of school age living on the islands. For them, there is a primary and a secondary school in Stanley and three small settlement schools on large farms. Other rural pupils are taught by 'travelling' teachers. Schooling is free and compulsory for children between five and sixteen years of age. The government pays for older students to attend colleges, usually in the UK.

V. The Falkland Islands government is taking advantage of cheap wind power. Since 1996, the government has been investing in the development of alternative sources of energy and can already enjoy the results. The Islands have experimented with other forms of energy, including hydro-electric and solar power. However, these forms cannot match the effectiveness of wind power yet.

VI. The Falklands War was fought in 1982 between Argentina and the United Kingdom. It started with the Argentine invasion and occupation of the Falkland Islands and South Georgia. The war lasted 74 days and ended with an Argentine defeat. However, Argentina still has not fully given up its claim to the territory of the islands.

PART 4

Questions 21–29

Read the following text for questions 21-29.

FISH AND CHIPS

Long before the Big Mac was invented, Britain had its own national form of fast food – fish and chips (or fish'n'chips for short). Fish'n'chips was a relatively balanced and healthy meal that people could eat in the street on the way home from work, or during their lunch-break. Wrapped in newspaper, it would keep warm even on the coldest days of the year. Besides, serving fish'n'chips in newspaper helped to keep prices low.

No British town is more than 150 km from a sea port, and most are much closer. So when railways were built in the 19th century, fresh sea fish could easily be bought in all British towns. Cheaper than meat, sea fish became a popular source of protein. By 1870, fish and chip shops were opening all over the country and soon every town in Britain had its fish'n'chip shops. For a hundred years, they were a popular British style restaurant.

In the last quarter of the 20th century, things changed. "Fish and chips are not so popular with young people these days," says Lizzie, a teenager. "Most of the time, if young people want to eat out, they'll go to a Burger King or a Chinese take-away. Fish 'n' chips is a bit old-fashioned. But there are still cheap chip shops around. We sometimes have it at home, and we go and get it from the chip shop. It saves cooking!"

Thousands of chip shops have closed in the last twenty-five years. Some have been turned into Chinese or Indian take-aways, others have just closed. They have survived best in seaside towns, where the fish is really fresh, and people visit them more as a tradition than for any other reason.

Yet nothing, perhaps, can save the classic fish'n'chip shop from disappearance. Fish'n'chips wrapped in newspaper is already just a memory. European hygiene rules don't allow food to be wrapped in old newspapers, so today's chip shops use cardboard boxes. Of course, you can still eat fish and chips with your fingers if you want, but there are now plastic throw-away forks for people who do not want to get greasy fingers!

In spite of these changes, the classic fish'n'chip shop could disappear in a few years' time for another reason – lack of fish.

For over ten years European agriculture ministers have been trying to solve the fish problem but with little success. As a result of industrial fishing, some types of fish are disappearing. Limits on the number of fish that can be caught have been introduced, but fishermen in Britain and other countries protest against them because jobs are lost. At some point, thousands of European fishermen could lose their jobs anyway, as there will be few fish left to catch. Soon sea fish will become rarer and, as a result, more expensive.

The traditional fish'n'chip shops will certainly continue to reduce in number. Soon cheap fish'n'chip shops will be gone completely. Fish and chips, however, will survive as a high-priced specialty in some expensive restaurants. In the years to come, they may become the only place where you can try this traditional English dish.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 **Fish'n'chips ...**
A) were as popular as Big Mac in the 19th century.
B) were originally Chinese or Indian food.
C) is not popular among the youth nowadays.
D) may completely disappear from markets including restaurants.

22 **Fish'n'chips were wrapped ...**
A) during a lunch-break
B) in magazines.
C) on the coldest days.
D) to keep it cheap.

23 **In the last twenty years, ...**
A) a lot of shops turned into restaurants.
B) 'fish'n'chips' has vanished from everywhere.
C) people started to like Chinese foods more than Big Macs.
D) many chip shops closed.

24 **The author argues that ...**
A) The British people should care about Fish'n'chips more than Big Macs or Indian foods.
B) In the near future, Fish'n'chips will vanish from daily lives.
C) Some restaurants are trying to preserve Fish'n'chips as a delicate food.
D) European hygiene rules are wrong to assume that wrapping in newspaper is unhealthy.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 **Traditionally only fish with white meat were used to make fish'n'chips.**
A) True
B) False
C) Not Given

26 **In the 19th century, in Britain, fish was more expensive than meat.**
A) True
B) False
C) Not Given

27 **According to Lizzie, today's young people prefer burgers to fish'n'chips.**
A) True
B) False
C) Not Given

28 **New packaging has made fish'n'chips more popular.**
A) True
B) False
C) Not Given

29 **In the near future there will be fewer places where people can try fish'n'chips.**
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE SECRET OF THE YAWN

When a scientist began to study yawning in the 1980s, it was difficult to convince some of his research students of the merits of "yawning science." Although it may appear quirky, his decision to study yawning was a logical extension to human beings of my research in developmental neuroscience, reported in such papers as "Wing-flapping during Development and Evolution." As a neurobehavioral problem, there is not much difference between the wing-flapping of birds and the face – and body-flapping of human yawners. Yawning is an ancient, primitive act. Humans do it even before they are born, opening wide in the womb. Some snakes unhinge their jaws to do it. One species of penguins yawns as part of mating. Only now are researchers beginning to understand why we yawn, when we yawn and why we yawn back. A professor of cognitive neuroscience at Drexel University in Philadelphia, Steven Platek, studies the act of contagious yawning, something done only by people and other primates.

In his first experiment, he used a psychological test to rank people on their empathic feelings. He found that participants who did not score high on compassion did not yawn back. "We literally had people saying, 'Why am I looking at people yawning?'" Professor Platek said. "It just had no effect."

For his second experiment, he put 10 students in a magnetic resonance imaging machine as they watched video tapes of people yawning. When the students watched the videos, the part of the brain which reacted was the part scientists believe controls empathy – the posterior cingulate, in the brain's middle rear. "I don't know if it's necessarily that nice people yawn more, but I think it's a good indicator of a state of mind," said Professor Platek. "It's also a good indicator if you're empathizing with me and paying attention."

His third experiment is studying yawning in those with brain disorders, such as autism and schizophrenia, in which victims have difficulty connecting emotionally with others. A psychology professor at the University of Maryland, Robert Provine, is one of the few other researchers into yawning. He found the basic yawn lasts about six seconds and they come in bouts with an interval of about 68 seconds. Men and women yawn or half-yawn equally often, but men are significantly less likely to cover their mouths which may indicate complex distinction in genders." A watched yawner never yawns," Professor Provine said. However, the physical root of yawning remains a mystery. Some researchers say it's coordinated within the hypothalamus of the brain, the area that also controls breathing.

Yawning and stretching also share properties and may be performed together as parts of a global motor complex. But they do not always co-occur – people usually yawn when we stretch, but we don't always stretch when we yawn, especially before bedtime. Studies by J.I.P, G.H.A. Visser and H.F. Prechtl in the early 1980s, charting movement in the developing fetus using ultrasound, observed not just yawning but a link between yawning and stretching as early as the end of the first prenatal trimester.

The most extraordinary demonstration of the yawn-stretch linkage occurs in many people paralyzed on one side of their body because of brain damage caused by a stroke. The prominent British neurologist Sir Francis Walshe noted in 1923 that when these hemiplegics yawn, they are startled and mystified to observe that their otherwise paralyzed arm rises and flexes automatically in what neurologists term an "associated response." Yawning apparently activates undamaged, unconsciously controlled connections between the brain and the cord motor system innervating the paralyzed limb.

It is not known whether the associated response is a positive prognosis for recovery, nor whether yawning is therapeutic for reinnervation or prevention of muscular atrophy. Clinical neurology offers other surprises. Some patients with "locked-in" syndrome, who are almost totally deprived of the ability to move voluntarily, can yawn normally. The neural circuits for spontaneous yawning must exist in the brain stem near other respiratory and vasomotor centers, because yawning is performed by anencephalic who possess only the medulla oblongata. The multiplicity of stimuli of contagious yawning, by contrast, implicates many higher brain regions.

Fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

A psychology professor drew a conclusion after observation that it takes about six seconds to complete average yawning which needs **30**_____ seconds before the following yawning comes. It is almost at the same frequency that male and female yawn or half, yet behavior accompanied with yawning showing a complex **31**_____ in genders. Some parts within the brain may affect the movement which also has something to do with breathing another finding also finds there is a link between a yawn and **32**_____ before a baby was born, which two can be automatically co-operating even among people whose **33**_____ is damaged.

For questions 34-35, choose the correct answer A, B, C, or D.

34 **According to the passage, the yawning and stretching...**

A) isn't primitive and ancient, as the research suggest.
B) is something we do before we even born.
C) has something to do our bedtimes.
D) is just a response to our stress.

35 **The author of this passage concludes that ...**

A) even the people who doesn't move voluntarily can yawn.
B) the yawning is still a mystery to many scientists.
C) contagious yawning is a neural disorder.
D) yawning happens inside the brain simultaneously.

WHALES

Over a hundred years ago, when Melville wrote his famous novel 'Moby Dick', hunting whales was a dangerous and sometimes fatal business, now, in spite of their size, **Q1** _____ are no longer a match for men using helicopters, radar and explosive harpoons. As a result, some species, such as the giant blue whale, are on the verge of becoming extinct. Although **Q2** _____ countries gave up whaling several **Q3** _____ ago, there was no international agreement forbidding it until recently, in spite of the fact that alternatives to the whale products used in oils, cosmetics and candies were already in existence. The whale is not the only **Q4**_____ fighting for survival. In the United States alone, conservationists have estimated that over a hundred kinds of animals, fish and birds will disappear before the end of the century unless action is taken to protect them. Although governments in many **Q5** _____ have done a great deal to control hunting and fishing for sport and have setup game reserves and bird sanctuaries where **Q6**_____ can brood safely in their natural surroundings, the number in danger is still increasing.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) Stratford Butterfly Farm

B) SAFE RIDE

C) Coventry Transport Museum

D) Warwick Castle

E) ThinkTank

F) Drayton Manor

G) Hatton Country World

H) Black Country Museum

I) National Sea-Life Centre

J) Home Zoo

7

Marco

Marco studies physics and is interested in anything to do with science. He'd like to visit somewhere to see some examples of early mechanical engines.

8

Gemma

Gemma wants to take her 5-year-old to see some animals. She'd also like to look around some shops to buy something for her mother's birthday.

9

Ingrid

Ingrid's eldest daughter is learning about English history and would like to go somewhere to bring this subject to life. Ingrid is really interested in flowers.

10

Trevor

Trevor is an artist and enjoys drawing wildlife. He recently visited a zoo and drew large animals and would like to try sketching something smaller.

11

Sarah

Sarah and her husband would like to spend the day outdoors. They don't like going on rides but are both interested in history and how people used to live.

12

Fred

Fred is doesn't like many attractions but he is really into some engines. He dislikes medieval era and would like to spend his time not only just watch but also make something too.

13

Amy

Amy like to spend his time something unforgettable. She doesn't mind watching animals as she is a big fan of underwater creatures.

14

Hoover

Hoover wants to go somewhere that he can enjoy being frightened. He also likes animals.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A means of comradeship
B) Dangerous entertainment
C) Muscle-power sports
D) Discriminated in sports
E) Contents of Sports Articles
F) A nation of sports pioneers
G) The history of sports
H) It's for healthy mind in a healthy body

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

SPORTS

I. Sport is probably as old as humanity itself. It has been developing with the growth of mankind. All over the world people of different ages are very fond of sports and games. Sport not only helps people to become strong and to develop physically but also makes them more organized and better disciplined in their daily activities. We all need exercise. Regular exercises give you more energy. That is why many people who suffer from general tiredness should take more exercise as it makes them feel and look better.

II. The British are known to be great sports-lovers, so when they are neither playing nor watching games, they like to talk about them. Football is, maybe, the most popular sport in the UK. England, Wales, Scotland and Northern Ireland have their own Football Leagues and National teams. Many of the games we play now come from Britain. The British got going many of the sports now played world-wide, including football, tennis, badminton, cricket and golf.

III. During the 1993 Fair in St. Louis Mr. Hatch decided to bungee jump. He arrived at 10.30 a.m., signed the release document and was lifted in the bungee cage 170 feet above the ground. His jump was being taped by a local television station. The bungee master told him that he had attached the bungee cord. Unfortunately, he forgot to attach the other end of the bungee cord and Mr. Hatch flew 170 feet to the airbag on the ground. As a result of the serious injuries he suffered, the jury awarded him $5,000,000 against both the Fair Foundation and the bungee jump operator.

IV. The original Olympic Games began in ancient Greece in 776 BC. These games were part of the festival held every fourth year in honour of the God, Zeus at a place called Mount Olympus. It was a great athletic festival, including the competitions in wrestling, foot racing, chariot racing, rowing and others. The games were for men only. Greek women were forbidden not only to participate in competitions but also to attend the Olympics.

V. Scottish Highland Games attract large numbers of spectators from all over the world. These meetings are held every year in different places of the Scottish Highlands. They include the clans led by their pipers, dressed in kilts, who march round the arena. No one knows exactly when the men of the Highlands first gathered to wrestle, toss cabers, throw hammers, dance, and play music. The Games reflected the hard life of the early Scots. They had to handle timber, lift rocks to build the houses, hunt, etc. The contests of the Highland Games have developed from such activities.

VI. The world's greatest international sports games are known as the Olympic Games. The Olympic Games mean friendship, fraternity, and cooperation among the people of the world. The Olympic movement proves that real peace can be achieved through sport. The Olympic emblem is five interlinking rings: blue, yellow, green, black, and red. Any national flag contains at least one of these colors.

PART 4

Questions 21–29

Read the following text for questions 21-29.

THE SELECTIVE MEMORY

Long, warm evenings spent messing around the village harbour. Watching the fishermen going about their business. I remember a general sensation of well-being. It never used to be cold as it always seems to be when I walk along the seacoast today. The endless days spent indoors because of the steady rain are forgotten. Only the sunshine and warmth remain as a memory. I lived in a little seaside village which was full of holidaymakers in the summer and deserted the rest of the year. We ran free, a gang of local children of all ages. School work was never a big issue; we used to do it quickly so we could go off down to the village. We used to eat enormous slices of bread and jam before pulling on our bathing costumes and heading for the harbour to join the other kids. Our main occupation during the summer months was jumping off the harbour wall into the sea. We used to encourage one another to jump higher and higher. The most admired feat used to be the big jump from the top of the small lighthouse which was the highest point along the sea wall. Only the bravest members of the gang used to do this one. But our greatest admiration was for the beautiful, young people who drove speed boats around the bay. We used to sit on the wall watching these strangers who lived in far-away towns and who spent their holidays sun bathing and waterskiing. We used to dream of becoming members of their exclusive club and going for trips around the bay. But they never mixed with us locals. Sometimes we went fishing off the rocks. We used to spend hours in the rock pools which were only visible at low tide. We didn't use to do things according to the time of day, but instead, we followed the rhythm of the sea. Our clock was the timetable at the entrance to the harbour which informed the fishermen of the daily times of high and low tides. The memories select only parts of childhood; the rest is pushed into dark corners. We never remember the whole truth, only bits and pieces picked up here and there. My own memory has only kept the happy moments of a free and easy childhood, but I wonder if this is always the case?

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 When the author was a child...

A) he was cold a lot
B) he watched fishermen as they were working
C) he remembers staying indoors as the sun was shining
D) they had their own exclusive club

22 During summer months the author and his friends ...

A) ate enormous breads and missed schools
B) watched the lighthouse
C) headed for the harbour to play jumping
D) used to mix with the locals

23 When did they spend hours in the rock pools?

A) when the strangers arrived
B) whenever they wanted
C) when they were pushed into dark corners
D) when the tide was low

24 The author concludes that...

A) the memory only selects certain moments of the childhood.
B) the memory does wonders when remembering certain things from the past.
C) he doesn't know if he has easy or hard childhood as he doesn't remember anything.
D) he remembers everything, from his childhood to present days and wonders how he can do this.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 The author remembers only the best days of his childhood.

A) True
B) False
C) Not Given

26 The author spent his childhood with his grandparents.

A) True
B) False
C) Not Given

27 The village was empty in cold seasons.

A) True
B) False
C) Not Given

28 The author didn't study well.

A) True
B) False
C) Not Given

29 The children never cared about what to eat.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

DUGONGS

Dugongs are herbivorous mammals that spend their entire lives in the sea. Their close relatives the manatees also venture into or live in freshwater. Together dugongs and manatees makeup the order Sirenia or sea cows, so-named because dugongs and manatees are thought to have given rise to the myth of the mermaids or sirens of the sea.

The dugong, which is a large marine mammal which, together with the manatees, looks rather like a cross between a rotund dolphin and a walrus. Its body, flippers and fluke resemble those of a dolphin but it has no dorsal fin. Its head looks somewhat like that of a walrus without the long tusks. Dugongs, along with other Sirenians whose diet consists mainly of sea-grass; and the distribution of dugongs very closely follows that of these marine flowering plants. As seagrasses grow rooted in the sediment, they are limited by the availability of light. Consequently they are found predominantly in shallow coastal waters, and so too are dugongs. But, this is not the whole story. Dugongs do not eat all species of seagrass, preferring seagrass of higher nitrogen and lower fibre content.

Due to their poor eyesight, dugongs often use smell to locate edible plants. They also have a strong tactile sense, and feel their surroundings with their long sensitive bristles. They will dig up an entire plant and then shake it to remove the sand before eating it. They have been known to collect a pile of plants in one area before eating them. The flexible and muscular upper lip is used to dig out the plants. When eating they ingest the whole plant, including the roots, although when this is impossible they will feed on just the leaves. A wide variety of seagrass has been found in dugong stomach contents, and evidence exists they will eat algae when seagrass is scarce. Although almost completely herbivorous, they will occasionally eat invertebrates such as jellyfish, sea squirts, and shellfish.

A heavily grazed seagrass bed looks like a lawn mown by a drunk. Dugongs graze apparently at random within a seagrass bed, their trails meandering in all directions across the bottom. This is rather an inefficient means of removing seagrass that results in numerous small tufts remaining. And this is where the dugongs derive some advantage from their inefficiency. The species that recover most quickly from this disturbance, spreading out vegetatively from the remaining tufts, are those that dugongs like to eat. In addition, the new growth found in these areas tends to be exactly what hungry dugongs like.

Dugongs are semi-nomadic, often travelling long distances in search of food, but staying within a certain range their entire life. Large numbers often move together from one area to another. It is thought that these movements are caused by changes in seagrass availability. Their memory allows them to return to specific points after long travels. Dugong movements mostly occur within a localised area of seagrass beds, and animals in the same region show individualistic patterns of movement.

Recorded numbers of dugongs are generally believed to be lower than actual numbers, due to a lack of accurate surveys. Despite this, the dugong population is thought to be shrinking, with a worldwide decline of 20 per cent in the last 90 years. They have disappeared from the waters of Hong Kong, Mauritius, and Taiwan, as well as parts of Cambodia, Japan, the Philippines and Vietnam. Further disappearances are likely. (In the late 1960s, herds of up to 500 dugongs were observed off the coast of East Africa and nearby islands. However, current populations in this area are extremely small, numbering 50 and below, and it is thought likely they will become extinct. The eastern side of the Red Sea is the home of large populations numbering in the hundreds, and similar populations are thought to exist on the western side. In the 1980s, it was estimated there could be as many as 4,000 dugongs in the Red Sea. The Persian Gulf has the second-largest dugong population in the world, inhabiting most of the southern coast, and the current population is believed to be around 7,500. Australia is home to the largest population, stretching from Shark Bay in Western Australia to Moreton Bay in Queensland. The population of Shark Bay is thought to be stable with over 10,000 dugongs.)

Experience from various parts of northern Australia suggests that Extreme weather such as cyclones and floods can destroy hundreds of square kilometres of seagrass meadows, as well as washing dugongs ashore. The recovery of seagrass meadows and the spread of seagrass into new areas, or areas where it has been destroyed, can take over a decade. For example, about 900 km2 of seagrass was lost in Hervey Bay in 1992, probably because of murky water from flooding of local rivers, and run-off turbulence from a cyclone three weeks later. Such events can cause extensive damage to seagrass communities through severe wave action, shifting sand and reduction in saltiness and light levels. Prior to the 1992 floods, the extensive seagrasses in Hervey Bay supported an estimated 1750 dugongs. Eight months after the floods the affected area was estimated to support only about 70 dugongs. Most animals presumably survived by moving to neighbouring areas. However, many died attempting to move to greener pastures, with emaciated carcasses washing up on beaches up to 900km away.

Fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

Dugongs are herbivorous mammals that spend their entire lives in the sea. Yet Dugongs are picky on their feeding Seagrass, and only chose seagrass with higher **30** _____ and lower fibre. To compensate for their poor eyesight, they use their sensitive **31** _____ to feel their surroundings. It is like Dugongs are "farming" seagrass. They often leave **32** _____ randomly in all directions across the sea bed. Dugongs prefer eating the newly grew seagrass recovering from the tiny **33** _____ left behind by the grazing dugongs.

For questions 34-35, choose the correct answer A, B, C, or D.

34 **The writer in emphasises in the passage that...**

A) We may never know the actual numbers of dugongs in the future
B) Seagrass meadows are getting destroyed by saltiness, floods and cyclones
C) Dugong habitat is destroyed after humans started to pollute the ocean
D) After floods, Dugong doesn't move away from their habitat and therefore dies soon after.

35 **What is the writer's purpose in the reading passage?**

A) to raise awareness of dugongs and their precious habitat
B) to give information about unique species
C) to criticise the flooding of the seas
D) to argue about the future of the sea

PART 1

Questions 1–6

Read the text about television. Choose the best word from the box for each gap. There are two extra words you do not need.

TELEVISION

The effects of **Q1**_____ have been much debated since it became widely available in the 1950s. There is little doubt that watching it has significant effects on **Q2**_____. Modern television is found in nearly every home, and many people consider it one of the most influential inventions of the twentieth century.

Those who are most influenced by TV are **Q3**_____. This is mainly because the amount of time they spend watching it is huge. For example, in the United States, children watch between three and four hours per day. They will have watched 8,000 hours before they even start school. By the time they are 18, they will have spent more time watching TV than any other single activity apart from sleeping.

A concern that is often raised is the question of **Q4**_____ on TV. Researches have established that children who watch TV are more likely to behave aggressively. Many studies show that exposure to violence in fictional shows can desensitise young viewers over time. Their **Q5**_____ can help limit the effects of what they see, however. Responsible parents often set firm rules about what their children can watch and how long they spend in front of the screen each day.

On the positive side, TV has the power to teach. Many educational **Q6**_____ help children learn about the world, widen their vocabulary, and develop numeracy. Documentaries, news bulletins and well-designed children's programs are common examples of broadcasts that combine entertainment with genuine learning.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. Mark your answers on the answer sheet.

A) PARADOX CHRONICLES. Venture into the unknown with this captivating sci-fi series that explores alternate realities, time travel, and the very nature of existence. With an engrossing storyline and a diverse cast of characters, Paradox Chronicles will keep you on the edge of your seat, questioning the fabric of reality itself.

B) YORKMAN. In this movie, one detective, when trying to solve a mystery, gets bitten by a radioactive fish and he transforms into a fish people king called 'Yorkman'. Suitable for both young and old audience who wants to watch superhero flick adventure.

C) FATE'S DESIGN. A thought-provoking drama series that delves into the lives of interconnected strangers, exploring themes of destiny, love, and the choices that shape our lives. Perfect for those who appreciate deep storytelling and character development.

D) ADVENTURES OF SMARTY AND FRIENDS. Join Smarty the owl and his friends on exciting adventures that teach valuable lessons about friendship, problem-solving, and the world around us. A fun and educational cartoon perfect for young children.

E) WAR ECHOES. A gripping documentary series that takes viewers through the pivotal moments of World War II, featuring rare footage and firsthand accounts from veterans. A must-watch for history enthusiasts.

F) SHADOW'S PURSUIT. Follow Detective Sarah Cole as she navigates the dark underbelly of the city, solving complex crimes and uncovering shocking truths. A thrilling mystery series with unexpected plot twists.

G) WARTALES. An animated series for adolescents featuring space adventures. Not suitable for children under 10.

H) LIFE ON CAMPUS. A hilarious sitcom that follows the misadventures of a group of college students as they navigate classes, relationships, and the ups and downs of university life. Perfect for unwinding after a long day.

I) WONDERS OF THE WILD. Immerse yourself in the breathtaking beauty of nature with this stunning documentary series. From the depths of the ocean to the peaks of mountains, explore the wonders of the natural world.

J) CULINARY FRONTIERS. Join renowned chef Marco as he travels the globe, discovering unique cuisines and learning traditional cooking techniques from local experts. A feast for the eyes and the taste buds.

7
Chuck
Chuck is a young working professional who enjoys thought-provoking dramas during their downtime.

8
Henry
Henry is a history buff with a fascination for World War II documentaries and stories.

9
Fred
Fred is a busy parent looking for a fun, educational cartoon for their young children to enjoy.

10
Joe
Joe is a fan of mystery and crime dramas, always seeking the next thrilling plot twist.

11
Maria
Maria is an aspiring chef who loves learning new recipes and cooking techniques through food and travel shows.

12
Laila
Laila is a college student who loves binge-watching sitcoms to unwind after a long day of studying.

13
Tony
Tony is a sci-fi enthusiast who's always on the lookout for the next mind-bending series.

14
Sawyer
Sawyer is a nature lover who enjoys immersing themselves in stunning visuals and captivating stories about the natural world.

PART 3
Questions 15–20

Read the text about the English language. Choose the best heading (A-H) for each paragraph. There are two headings you do not need.

List of Headings:
A) How it all began
B) Greedy borrower
C) Different or alike?
D) A universal language
E) A way of learning languages
F) A special day
G) A world language
H) A language teacher

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

THE ENGLISH LANGUAGE

I. English is spoken as a first language by about 375 million people and as a second language by around 375 million more. It is the official or semi-official language in over 60 countries and is prominent in over 20 more. It is the dominant language on the Internet and in international business, science, and aviation.

II. English developed from the languages of Germanic tribes (Angles, Saxons, and Jutes) who settled in Britain from the 5th century. The name 'English' comes from 'Angles,' one of these tribes. The language was influenced by Norse invaders in the 8th and 9th centuries and later by the Norman Conquest of 1066.

III. One notable feature of English is the large number of words it has borrowed from other languages. About 80% of English vocabulary is foreign in origin. Words have been adopted from Latin, French, Greek, and many other languages.

IV. Although British English and American English are generally similar, there are differences in spelling (colour/color), vocabulary (lift/elevator), and pronunciation. Australian, Indian, and other varieties of English also have their distinctive features.

V. English has become the global language of communication. More people learn English as a foreign language than any other. It is estimated that about one billion people are currently learning English worldwide.

VI. Many language learners find that watching English films, listening to English songs, and reading English books are effective ways to improve their skills. Immersion in the language through travel or living abroad is also popular.

PART 4
Questions 21–29

Read the following text for questions 21-29.

NOSTRADAMUS THE PROPHET

Michel de Nostredame, better known as Nostradamus, was born in Saint-Remy-de-Provence, France, in December 1503. He became famous for his book of prophecies, first published in 1555, which many believe predicted future events.

Nostradamus initially trained as a physician and gained a reputation for treating plague victims. However, he became interested in the occult and began making predictions. His prophecies were written in quatrains - four-line verses - and grouped into sets of 100 called "centuries."

The prophecies are deliberately vague and written in a mixture of languages including French, Greek, and Latin. This makes them open to many interpretations. Supporters claim he predicted events such as the Great Fire of London, the French Revolution, Napoleon's rise, both World Wars, and the September 11 attacks.

Critics argue that his writings are so ambiguous that they can be fitted to almost any event after it has happened. Scientific analysis has found no evidence that his success rate is any better than chance. Despite this, his books have rarely been out of print and continue to attract interest, especially during times of crisis or at the turn of centuries.

Nostradamus died on July 2, 1566. According to legend, he predicted his own death, telling his secretary the night before: "You will not find me alive at sunrise." Whether this is true or just another myth surrounding this enigmatic figure remains uncertain.

For questions 21-24, choose the correct answer A, B, C, or D.

21 **Nostradamus was originally trained as**
A) a prophet
B) an astrologer
C) a writer
D) a doctor

22 **His prophecies were written in**
A) prose paragraphs
B) long poems
C) four-line verses
D) single sentences

23 **Critics say his predictions**

A) are always accurate
B) are better than chance
C) can fit many different events
D) were written after the events

24 **Interest in Nostradamus tends to increase**

A) when his books are reprinted
B) during uncertain times
C) on the anniversary of his death
D) when new prophecies are discovered

For questions 25-29, decide if the following statements agree with the information given in the text.

25 **Nostradamus was born in the 16th century.**

A) True
B) False
C) Not Given

26 **His prophecies were written entirely in French.**

A) True
B) False
C) Not Given

27 **Scientific studies support the accuracy of his predictions.**

A) True
B) False
C) Not Given

28 **His books are still being published today.**

A) True
B) False
C) Not Given

29 **Nostradamus predicted when he would die.**

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

MALARIA IN ITALY

Malaria was once a major health problem in Italy, particularly in the southern regions and areas with marshlands. The disease was spread by insects that bred in stagnant water, and it affected millions of Italians over the centuries.

The name "malaria" itself comes from Italian, meaning "bad air" - people originally believed the disease was caused by the unclean air from swamps rather than by insects. This misconception persisted for centuries until scientists discovered the true cause.

In the early 20th century, Italy launched a major campaign to eradicate malaria. This involved draining marshes, distributing quinine (an anti-malarial drug), and using insecticides. The campaign was remarkably successful, and by 1970, Italy was declared malaria-free by the World Health Organization.

Before eradication, malaria had a profound impact on Italian society. It caused high mortality rates, particularly among children, and left survivors weakened and unable to work effectively. The disease seemed to run in families, leading some to believe it was hereditary. Entire regions were affected, and the disease was a major factor in the poverty of southern Italy.

The conquest of malaria in Italy led to significant improvements in health and life expectancy. Areas that were once avoided because of the disease became habitable and productive. This transformation contributed to Italy's economic development in the latter half of the 20th century.

Fill in the missing information in the numbered spaces. Write no more than ONE WORD for each question.

Malaria was spread by **30** _____ that lived in marshes. People wrongly thought it was caused by **31** _____ air. The disease seemed to run in families, suggesting a **32** _____ factor. After eradication, life **33** _____ improved significantly.

For questions 34-35, choose the correct answer A, B, C, or D.

34 **Italy's anti-malaria campaign included all of the following EXCEPT:**

A) vaccinating the population
B) draining wetlands
C) providing medicine
D) using pesticides

35 **The elimination of malaria in Italy resulted in:**

A) increased tourism
B) population decline
C) new disease outbreaks
D) economic growth

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

BUYING TOYS FOR CHILDREN

Buying toys for children can be somewhat confusing and frustrating for parents as well as for gift givers. **Q1**_____ can show surprising preferences in toys; a favourite is not necessarily expensive or unique or "in". Matching **Q2**_____ carefully to a child's age, however, can help this dilemma. Children usually fall into several different "toy-preference" **Q3**_____ groups. Infants under eighteen months go through two stages. Before they can sit up, they **Q4**_____ toys that appeal to the senses, such as colourful mobiles, squeaky rubber toys or big chewable beads. After they **Q5**_____ sit up, babies like "graspable" things like blocks, nesting and stacking toys, and cloth picture books. Children from eighteen months to three years – toddlers like toys that move (as they are learning to do). **Q6**_____ also like to use their hands.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. Mark your answers on the answer sheet.

A) MODERN ART MUSEUM. Looking for a modern artistic experience? Our museum is perfect for older art lovers who want to learn about contemporary art. We offer various collections of arts from modern times and we hope it gets you inspired to make your own art someday! We are open every day.

B) STORY OF NATURE. Looking for exciting adventure? That's out museum for you! If are a child who is enthusiastic about nature and its story, our museum offers grand tours, educational activities and special family-friendly games! We are open every day, except on weekends evening.

C) NATURE AT ITS BEST. Looking for an animal adventure? Our museum is perfect for animal lovers who want to learn about nearly extinct species. We offer interactive exhibits and educational programs that explore the world of wildlife conservation! We are special underwater section that has 40 species of reptiles and amphibians. We are open every day.

D) NEIL ARMSTRONG MUSEUM. Looking for an out-of-this-world experience? Want to find out how Neil went to the Moon? Our museum is perfect for the fans of outer space. We also offer unique interactive experience about rocket design. We are open from Monday to Thursday.

E) TAMERLANE MUSEUM. This museum has a lot of historical artifacts and collections from Tamerlane period. We have 5000 kinds of jewellery, 1000 kinds of weapons and some other things. We are open everyday.

F) THE WAY OF WATER. Looking for an underwater adventure? Our museum is perfect for nature lovers who want to learn about marine life. We have 400 kinds of fish, 200 species of frogs, iguanas and sea turtles. We are open on every weekday.

G) FUN HISTORY. Are you planning to visit a museum with your children? Do you want a family-friendly museum? Ours is perfect for families with young children who want to learn about history. We also offer interactive exhibits and educational programs! We are open only weekends.

H) MICHAELANGELO. Looking for an artistic experience and intellectual stimulation? Our museum is perfect for college students who want to learn about art and culture. We offer affordable tickets and plenty of exhibits! Our museum is open from Tuesday to Friday evening.

I) SWEET DREAMS. Looking for a delicious experience? Our museum is perfect for foodies who want to learn about culinary arts. We offer interactive exhibits and educational programs that explore the world of food and drink! All from nature! We are open every day expect Thursday.

J) REVOLUTION MUSEUM. Looking for an educational experience? Our museum is perfect for history loves who want to learn about the American Revolution. We also offer some interactive, family-friendly activities as well as guides who teaches people about historical topics. We are open at the weekend.

7

Rebecca

Rebecca and her children wants to visit a history museum. Rebecca expects the museum to be kids friendly. She works weekdays so she prefers to a museum that can or stays open after working days.

8

John and Mark

John and Mark are classmates and they are both art enthusiasts. They can be busy for weekdays usually but they can have time for Wednesday. They are aiming for something cheaper.

9

Alisher

Alisher is a history buff. He really loves American history and he would like to visit some American History Museum and gain more knowledge about it. He works from Thursday to Saturday.

10

Jack

Jack is a science, history and rocket enthusiast. He really wants to see a place where he can experience space exploration. He works every day but can find time on Wednesday evening.

11

Jamshid

Jamshid is a nature lover. As a matter of fact, he really loves sharks and turtles. He wants to see evolution and history of sea reptiles and amphibians. They don't work on Monday and Tuesday.

12

Aziza and Rustam

Aziza and Rustam reads history. They are interested in the history of America as well as Africa and Asia. They really do not mind wars but prefer to visit some cultural museum. They are both students to they have to study every day expect Friday and Saturday.

13

George

George is an animal lover and he is interested in endangered species. He doesn't mind visiting any day but he expects the museum to have endangered sea animals.

14

Rosie

Rosie is schoolgirl. She wants to visit a museum about nature history. She wants to go somewhere which is kid friendly. She can only visit after school which is evenings.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Bright and safe
B) The symbol of the capital
C) The bus you don't need to drive
D) Watching and learning
E) The story of the name
F) They have to be skilled and attentive
G) Special traffic rules for the bus
H) A perfect way to see the capital

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

BUSES

I. A walking school bus is a group of children walking to school with one or more adults. It can be informal — when two families take turns in getting their children to school. It also can be a structured and planned route with meeting points, a timetable and specially trained volunteers. It's certainly safer for kids who would otherwise walk alone to school. A walking school bus provides exercise and security.

II. Every day thousands of Londoners use big red buses to move around town. These buses were designed especially for London, by people who knew what London needed, and they have served their purpose well! There are hundreds of bus routes all over London. The double-decker bus has become an emblem of London, just as recognizable as Big Ben or Tower Bridge.

III. Have you ever wondered why school buses are either yellow or orange? Yellow is an attention-grabbing colour. Scientists have discovered yellow is 1.24 times better for catching our eye than red. People can detect yellow even from the corner of their eye. Yellow is easier to notice in dim light or bad weather. For these reasons, school buses in many countries are yellow.

IV. Few people know that the word bus is a short form of the Latin word omnibus. A businessman named Stanislas Baudry started the first horse-drawn omnibus service in the French city of Nantes in 1823. The first vehicles stopped in front of the hatter's shop which had a large sign Omnes Omnibus. Soon Nantes citizens gave the nickname omnibus to the vehicle. The word omnibus means for all in Latin. In 1828, Baudry launched the omnibus service in Paris too.

V. Moscow, like other touristic cities, has double-decker buses — so called hop-on — hop-off buses. A ticket for this bus is valid for one or two days. You can get on and off the bus as many times as you like. The second deck has two parts: an open part, and a closed one. You can enjoy the open part in the warm weather and the closed part when the weather is not very good. Every passenger is supplied with a free city map and a free headphone set to listen to the audio guide.

VI. The job of a bus driver goes beyond just driving the vehicle! Bus drivers are responsible for the safety of their passengers, which can sometimes be as many as 100 people! They are responsible for driving their assigned route and sometimes they have to take fares and answer passengers' questions. Bus drivers also check the safety of their vehicle and make sure it has working safety equipment like first aid kits and fire extinguishers.

PART 4

Questions 21–29

Read the following text and choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

THE RAINMAKER

Scientists are very sceptical about man's ability to initiate weather like, rain or snow. Nevertheless, in 1902, an American, Charles Hatfield, first claimed he had invented a new chemical method to generate rain. He applied his method on a commercial basis for the next twenty years and got a reputation as a rainmaker.

Hatfield lived in Kansas and worked for a company that sold sewing machines. He considered his work boring and felt fed up with it. He dreamt of fame. Chemistry had always been Hatfield's great interest. For several years he was working on a formula that could initiate rain. After 1904, when he moved to California, his life changed dramatically. The advertisements he placed in

the Los Angeles newspapers promised perfect rain for only fifty dollars. Because of the extremely dry season several farmers decided to try their chance. Hatfield and his brother built a tower on the top of a mountain and dispersed some chemicals into the air. Incredibly enough, soon it started to rain. Both the farmers and the 'wizard' were happy. The news about Hatfield's success spread around the country. The number of orders was growing fast. He travelled a lot, initiating rain in different regions but he was careful to keep his magic formula a secret. Inspired by these results, he promised Los Angeles Council forty-six centimeters of rainfall. It seemed unbelievable because so much rainfall was not typical for the city. Surprisingly, the next morning, after Hatfield's chemical experiments, rain was pouring down.

Some meteorologists did not regard Hatfield's success as genuine. They were sure it was a coincidence and that most rain was the result of cyclones. On the other hand, there were scientists who took it quite seriously and wanted to watch the phenomenon in reality. It also needs to be mentioned that Hatfield was not always lucky. For example, in 1906 he was asked to initiate rain in the gold fields of the Klondike. No matter how hard he tried, the sky stayed cloudless. Fame and the need for money drove Charles Hatfield to further risky experiments. He bet he could fill in the container of the water lock near San Diego with rain water. If he succeeded, he was promised ten thousand dollars. Together with his brother, Hatfield built a six-meter tower and dispersed the chemicals into the air. Some days later it began to rain heavily.

The rain did not stop for two weeks. The water lock container was full to the top as well as two nearby locks. The coming water overfilled the rivers, destroyed some bridges, roads and phone cables. Many houses and farms went under water because of the rainfall. Local officials blamed Hatfield for the loss and refused to pay him the money. Hatfield was called to court to compensate for the three-billion-dollar loss. Luckily, he escaped punishment because he had no written agreement with officials to start the experiment. Besides, the judge was sure that a man could not influence the weather. However, Charles Hatfield sincerely believed that his formula worked and continued his rain initiating practice. He died in 1958 but never gave away his secret.!

For questions 21-24, choose the correct answer A, B, C, or D.

21 **At first, Charles Hatfield...**

A) worked for a company that sold sewing machines
B) claimed that he invented a rainmaking formula
C) placed an ad for a paper

22 **On one hand, scientists regarded his success as a coincidence, on the other hand...**

A) Charles was right, he really invented a formula for rainmaking
B) He never shared his secrets with them, which made them very angry
C) there were some scientists who really believed the idea

23 **After he "made" the rain in San Diego, he ...**

A) was paid ten thousand dollars
B) eventually gave three-billion-dollars for the rain's damages
C) didn't get the money however, escaped the punishment.

24 **Charles' experiment involved ...**

A) some chemicals and a mountain.
B) building a tower and pouring chemicals from them.
C) some ancient "wizardry"

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **Hatfield's work for the company had nothing to do with chemistry.**

A) True
B) False
C) Not Given

C) Not Given

29 **Hatfield never failed in his rain initiating business.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE HISTORY OF PENCIL

A. The beginning of the story of pencils started with lightning. Graphite, the main material for producing a pencil, was discovered in 1564 in Borrowdale in England when lightning struck a local tree during a thunder. Local people found out that the black substance spotted at the root of the unlucky tree was different from burning ash of wood. It was soft, thus left marks everywhere. The chemistry was barely out of its infancy at the time, so people mistook it for lead, equally black but much heavier. It was soon put to use by locals in marking their sheep for signs of ownership and calculation.

B. Britain turns out to be the major country where mines of graphite can be detected and developed. Even so, the first pencil was invented elsewhere. As graphite is soft, it requires some form of the encasement. In Italy, graphite sticks were initially wrapped in string or sheepskin for stability, becoming perhaps the very first pencil in the world. Then around 1560, an Italian couple made what are likely the first blueprints for the modern, wood-encased carpentry pencil their version was a flat, oval, more compact type of pencil. Their concept involved the hollowing out of a stick of juniper wood. Shortly thereafter in 1662, a superior technique was discovered by German people: two wooden halves were carved, a graphite stick inserted, and the halves then glued together – essentially the same method in use to this day. The news of usefulness of these early pencils

spread far and wide, attracting the attention of artists all over the known world.

C. Although graphite core in pencils is still referred to as lead, modern pencils do not contain lead as the "lead" of the pencil is actually a mix of finely ground graphite and clay powders. This mixture is important because the amount of clay content added to the graphite depends on intended pencil hardness, and the amount of time spent on grinding the mixture determines the quality of the lead. The more clay you put in, the higher hardness the core has. Many pencils across the world and almost all in Europe are graded on the European system. This system of naming used B for black and H for hard; a pencil's grade was described by a sequence or successive Hs or Bs such as BB and BBB for successively softer leads, and HH and HHH for successively harder ones. Then the standard writing pencil is graded HB.

D. In England, pencils continued to be made from whole sawn graphite. But with the mass production of pencils, they are getting drastically more popular in many countries with each passing decade. As demands rise, appetite for graphite soars. According to the United States Geological Survey (USGS), world production of natural graphite in 2012 was 1,100,000 tonnes, of which the following major exporters are: China, India, Brazil, North Korea and Canada. When the value of graphite was realised, the mines were taken over by the government and guarded. One of its chiefs uses during the reign of Elizabeth I in the second half of the 16th century was as moulds for the manufacture of cannonballs. Graphite was transported from Keswick to London in armed stagecoaches. In 1751 an Act of Parliament was passed making it an offence to steal or receive "wad". This crime was punishable by hard labour or transportation.

E. That the United States did not use pencils in the outer space till they spent $1000 to make a pencil to use in zero gravity conditions is, in fact, a fiction. It is widely known that astronauts in Russia used grease pencils, which don't have breakage problems. But it is also a fact that their counterparts in the United States used pencils in the outer space before real zero gravity pencil was invented. They preferred mechanical pencils, which produced fine lines, much clearer than the smudgy lines left by the grease pencils the Russians favoured. But the lead tips of these mechanical pencils broke often. That bit of graphite floating around the space capsule could get into someone's eye, or even find its way into machinery or electronics, causing an electrical short or other problem. But despite the fact that the Americans did invent zero gravity pencils later, they stuck to mechanical pencils for many years.

F. Against the backcloth of a digitalized world, the prospect of pencils seems bleak. In reality, it does not. The application of pencils has by now become so widespread that they can be seen everywhere, such as classrooms, meeting rooms and art rooms, etc. A spectrum of users are likely to continue to use it into the future: students to do math works, artists to draw on sketch pads, waiters or waitresses to mark on order boards, make-up professional to apply to faces, and architects to produce blueprints. The possibilities seem limitless.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

Graphite was found under a **30** _____ in Borrowdale.

Ancient people used graphite to sign possession and number of **31** _____.

In the eighteenth century, the **32** _____ protect the mines when the value of graphite was realized.

During the reign of Elizabeth I, people was condemnable if they steal or receive the "was".

Russian astronauts preferred **33** _____ pencils to write in the outer space.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **Which statement is FALSE according to the passage?**

A) Italy is probably the first country in the whole world to make pencils.
B) The European pencil grading system uses 'B' for black and 'H' for hard.
C) American astronauts did not replace mechanical pencils immediately after the zero-gravity pencils were invented.
D) Graphite makes a pencil harder and sharper.

35 **What is the writer's conclusion in the reading passage?**

A) Pencils will soon become obsolete in the digitized world.
B) Artists and students are using less and less each year even though they are everywhere
C) Using pencil is becoming more common than anytime now
D) Other than architects, waiters and students, people doesn't use pencil commonly and have already been replaced by tablet sketch pads and digital blueprint

MOCK TEST 9

📖 READING

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

SPIES

Although most countries employ spies, few will ever admit that they do. Therefore, it is only on the rare occasion of a **Q1** _____ being caught by an enemy **Q2**_____ that the public becomes aware of what goes on behind the political scenes. Even the exchange of a captured **Q3**_____ spy for one of the country's own master-spies who had been caught by an enemy country is done as secretly as possible. Early one cold December morning last year, three men dressed in heavy black overcoats got out of a small blue car that had stopped on a lonely bridge in Northern Germany. They stood on the **Q4** _____ for fifteen minutes waiting and watching until they saw a motorboat draw up and stop below the bridge. Seeing three **Q5**_____ stepped out of the boat and glanced up at the bridge, they quickly made their way down to the riverbank and the **Q6**_____. No words were spoken when the six men met. A short time later the boat pulled away and three men, too in black, and one in dark gray, returned to the waiting car.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. Mark your answers on the answer sheet.

A) FAMILY ADVERTISEMENT. Looking for a flexible work schedule? Our company is perfect for stay-at-home people who want to work part-time. We offer competitive hourly rates and a supportive work environment! We have customer service and consultancy vacancies.

B) PREMIUM MANAGEMENT GROUP. Looking for a leadership role? Our company is perfect for newbie people who want to take their careers to the next level. We offer training programs and someday, you may become a professional! We also offer jobs at a customary service (full-time and local people only).

C) IT'S A REAL ESTATE! Looking for a lucrative career in real estate? Our company is perfect for sales professionals who want to make their mark. We also offer vacancies and training programs for those who want to be a professional! Just contact our consultant!

D) MENTOR ACADEMY. Looking for a part-time job while you're in school? Our company is perfect for students who want to work as tutors. We offer consultants and a service for our pupils.

E) CALL TO AID. Looking for a welcoming work environment? Our company is perfect for recent immigrants who want to work in customer service or consultants. We offer language support and opportunities for advancement!

F) BEST CHANCE. Looking for a career in advertising? Are you a retiree? Say no more! We offer jobs at BEST CHANCE company. You may work in our special customary service for older people! We offer part-time jobs only.

G) FCI GOLDEN MANAGEMENT. Looking for a leadership role? Our company is perfect for experienced professionals who want to take their careers to the next level.

H) VECTOR ADS. Looking for an exciting career in advertising? Our company is perfect for creative professionals who want to make an impact. We offer competitive salaries and opportunities for advancement!

I) UP. Looking for a rewarding career at the old age? Our company is perfect for retirees who want to work as consultants. We offer flexible schedules and competitive compensation packages!

J) MARKETING 101. Looking for an entry-level marketing position? Our company is perfect for graduates who want to gain experience in the field. We offer competitive salaries and opportunities for growth! We can accept both part- and full-time jobs.

7
John
John has just finished college. He wants to test himself on a promotional job. He wants a part-time job.

8
Julia and Mark
Julia and Mark are married. They have three kids and they can't work full time. They would like to work at the same place and they would prefer to work distantly.

9
Yusuf
Yusuf has recently come to the USA. He wouldn't mind working anywhere but he would love if he worked in a support or service.

10
Mark
Mark is retired. He wants a full-time job and he wants to work as an advisor.

11
Farukh
Farukh has recently come from the Britain. He wants to work in a familiar job. He is good at teaching.

12
Murod
Murod is a creative professional who wants to work in advertising. He wants to work at a part time job.

13
Brad
Brad would love to work in a real estate business. He has recently graduated from college and he doesn't have experience.

14
Joseph
Joseph is an experienced professional. He wants to work in management. He wants to work full-time.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:
A) New Strategies
B) Origin of Mass Media
C) Negative Effects
D) Positive Effects
E) Media Bias
F) Confronting Reality
G) Media Censorship
H) Payments in Media

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

MASS MEDIA

I. Europe can boast to be the primary source of mass media. It was Johannes Gutenberg who for the first time printed a book in a printing press in 1453. Gradually, after the Second World War, radio, television, and video were introduced. The audio-visual facilities became very popular as they provided information and entertainment. The Internet has become the latest and most popular type of mass media. Here, information is generated through numerous websites and search engines. It also gives information on various topics similar to other types of mass media.

II. Mass media increase an overall awareness of the masses. They enhance the general knowledge by providing us with information from all over the world. News broadcasted through different media helps us know about the day-to-day events in the world. News and documentaries revolving around social issues increase social awareness in children and develop their concern towards society. Newspapers, apart from updating us with the latest news and new information, exchange their views over different issues that the society faces and share their thoughts on a larger scale.

III. Some experts believe that it is mass media to be blamed for eating disorders in the youths as well as for the unhealthy lifestyle that has recently emerged. The products advertised by the media and the ways they are advertised are bound to affect the practices of the youths. Children, who should invest their time in reading books, studying, playing outdoors, exercising, and engaging in social activities, today spend their evenings glued to the television. People spending hours in front of a television or surfing the Internet suffer from eye problems and obesity.

IV. Traditionally, media planning meant deciding what kind of media should be employed for the advertising campaign. They would decide where the advertisement would have the maximum impact. Today, the concept of media planning has undergone a change. Media planning now involves not only selecting a media for advertising but also deep analyses into the outreach of the ads. Also, media planners will today select unconventional streams of advertising such as mobile vehicles. Newer options are chosen depending on what the product being publicized is.

V. The Internet is a very potential source of advertising, and it is quite understandable why every company tries to promote its wares through websites. The focus here is on reaching out to the niche customers. This is what an online media planner undertakes. Media planners do not get a commission as most other people in the advertising industry do. This is because media planners do not work with volumes; they work with strategies. Their services are creative. For this reason, they receive percentage cuts from the total budgets of the advertising campaigns.

VI. There was a time when one could always rely on the various types of mass media for accurate information. But in recent years, the media have been sensationalizing lots of news or events and giving unnecessary importance to certain issues. There have been lots of situations wherein a journalist has reported a particular incident with a prejudiced opinion. The various forms of mass media are known to influence the minds of the audiences to a large extent. So, does it mean that the media control our world?

PART 4

Questions 21–29

Read the following text and choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

WORLD BOOK DAY – THE TEST TEEN READS

It is often suggested that teachers and librarians aren't pushing secondary school readers towards titles that challenge them enough, and so the organisers of World Book Day have announced a list which might provide some inspiration for anyone who's stuck for ideas. This list of popular books for young adults, voted for by 10,000 people across the UK, features a top 10 to 'shape and inspire' teenagers, and handle some of the challenges of adolescence. All but one of the books have already been made into films, demonstrating that when a book makes it to the big screen, it often then acquires more readers thanks to the film's success. Of course, this isn't always the case,

as with George Orwell's 1984, where the rather mediocre film does not compare so favourably with the book's ability to conjure up a dark vision of life in a police state. James Bowen's A Streetcat Named Bob, published in 2012, is one of the few relatively contemporary books here. It's also certainly for me the least predictable member of the list, but its extended stay on the bestseller list earned it – and its author – a devoted following. It is the touching story of Bob, the cat who helped a homeless man called James get his life back on track. Bob sits on James's shoulder and sleeps at his feet while he plays the guitar on the street, and soon becomes the centre of attention. What makes the story particularly powerful is that it is based on author James Bowen's real life. Also on the list are J. K. Rowling's Harry Potter books. In this case it's actually the whole series rather than one particular title that makes the shortlist. Perhaps the judges struggled to agree which one book to pick. For me, the books are rather more pre-teen than the rest of the books on the list, which are aimed at a more mature readership. But Harry Potter is a special case: as Harry gets older in each successive book in the series, the stories do become more complex and darker. In a way, readers themselves grow up with Harry and his friends. Rowling asks some tough questions about standing up to authority, challenging 'normal' views and many other subjects close to teenage readers' hearts. This should get rid of the idea that the whole series is just for young kids. In actual fact, half of all Harry Potter readers are over the age of 35, but that's another story. The list goes right back to the nineteenth century with Charlotte Bronte's great romance Jane Eyre, showing that some books never grow old, though the majority are twentieth-century works such as Anne Frank's heartbreaking wartime memoir The Diary of a Young Girl, which even now I find hard to get through without shedding tears. Personally, I would have swapped J. R. R. Tolkien's The Lord of the Rings for one of the many classics that didn't make the final selection, Lord of the Flies perhaps, William Golding's nightmare vision of schoolboys stuck on an island. Of course there'll always be some choices we don't agree with, but that's what I think makes a list like this so fascinating. I've been using it with my class of 16-year-olds, and I got them to evaluate it and make other suggestions for what to include or how it could be changed. But what I hope can really make a lasting difference is if it stimulates them to try out writers on the list, perhaps ones they haven't come across before, and be introduced to new styles of writing.

For questions 21-24, choose the correct answer A, B, C, or D.

21 What criticism does the writer make in the first paragraph?

A) World Book Day has been poorly organized.
B) School librarians aren't working hard enough.
C) Teenagers are reading books that are too easy.
D) Teachers don't encourage pupils to read enough.

22 What point is made about books which are made into films?

A) The best books tend to be made into films.
B) The film of a book makes more people read the book.
C) Many people prefer to watch a film than to read the book.
D) It is useful to be able to compare the book and the film.

23 What does the writer suggest about A Street Cat Named Bob?

A) She is surprised that it is on the list.
B) The book did not sell as well as it deserved to.
C) It is the most recently published book on the list.
D) It is the only autobiography on the list.

24 How does the writer justify the presence of the Harry Potter books on the list?

A) The books' fame can help the list get more attention.
B) The later books in the series are more suitable for teenagers.
C) Teenagers should read books that they will also enjoy as adults.
D) It makes sense to have a whole series as well as individual books.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 10,000 books are said to be popular in the UK.

A) True
B) False
C) Not Given

26 In Harry Potter books, as Harry grows up, the books become darker.

A) True
B) False
C) Not Given

27 Lord of the Flies is better than Harry Potter.

A) True
B) False
C) Not Given

28 George Orwell's book, 1984, was actually a mediocre.

A) True
B) False
C) Not Given

29 Some book adaptations can get more attention from viewers when it's adapted to a film.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE NATURAL OF YAWNING

A. While fatigue, drowsiness or boredom easily bring on yawns, scientists are discovering there is more to yawning than most people think. Not much is known about why we yawn or if it serves any useful function. People have already learned that yawning can be infectious. "Contagious yawning" is the increase in likelihood that you will yawn after watching or hearing someone else yawn, but not much is known about the underlying causes, and very little research has been done on the subject. However, scientists at the University of Albany, as well as the University of Leeds and the University of London have done some exploration.

B. It is commonly believed that people yawn as a result of being sleepy or tired because they need oxygen. However, the latest

research shows that a yawn can help cool the brain and help it work more effectively, which is quite different from the popular belief that yawning promotes sleep and is a sign of tiredness. Dr Andrew Gallup and his colleagues at the University of Albany in New York State said their experiments on 44 students showed that raising or lowering oxygen and carbon dioxide levels in the blood did not produce that reaction. In the study participants were shown videos of people laughing and yawning, and researchers counted how many times the volunteers responded to the "contagious yawns". The researchers found that those who breathed through the nose rather than the mouth were less likely to yawn when watching a video of other people yawning. The same effect was found among those who held a cool pack to their forehead, whereas those who held a warm pack yawned while watching the video. Since yawning occurs when brain temperature rises, sending cool blood to the brain serves to maintain the best levels of mental efficiency.

C. Yawning is universal to humans and many animals. Cats, dogs and fish yawn just like humans do, but they yawn spontaneously. Only humans and chimpanzees, our closest relatives in the animal kingdom, have shown definite contagious yawning. Though much of yawning is due to suggestibility, sometimes people do not need to actually see a person yawn to involuntarily yawn themselves: hearing someone yawning or even reading about yawning can cause the same reaction.

D. However, contagious yawning goes beyond mere suggestibility. Recent studies show that contagious yawning is also related to our predisposition toward empathy— the ability to understand and connect with others' emotional states. So empathy is important, sure, but how could it possibly be related to contagious yawning? Leave it up to psychologists at Leeds University in England to answer that. In their study, researchers selected 40 psychology students and 40 engineering students. Generally, psychology students are more likely to feel empathy for others, while engineering students are thought to be concerned with objects and science. Each student was made to wait individually in a waiting room, along with an undercover assistant who yawned 10 times in as many minutes. The students were then administered an emotional quotient test: students were shown 40 images of eyes and asked what emotion each one displayed. The results of the test support the idea that contagious yawning is linked to empathy. The psychology students—whose future profession requires them to focus on others—yawned contagiously an average of 5.5 times in the waiting room and scored 28 out of 40 on the emotional test. The engineering students—who tend to focus on things like numbers and systems—yawned an average of 1.5 times and scored 25.5 out of 40 on the subsequent test. The difference doesn't sound like much, but researchers consider it significant. Strangely enough, women, who are generally considered more emotionally attuned, didn't score any higher than men.

E. Another study, led by Atsushi Senju, a cognitive researcher at the University of London, also sought to answer that question. People with autism disorder are considered to be developmentally impaired emotionally. Autistics have trouble connecting with others and find it difficult to feel empathy. Since autistics have difficulty feeling empathy, then they shouldn't be susceptible to contagious yawning. To find out, Senju and his colleagues placed 49 kids aged 7 to 15 in a room with a television. 24 of the test subjects had been diagnosed with autism spectrum disorder, the other 25 were non-autistic kids. The test subjects were shown short clips of people yawning as well as clips of people opening their mouths but not yawning. While the kids with autism had the same lack of reaction to both kinds of clips, the non-autistic kids yawned more after the clips of people yawning.

F. There also have been studies that suggest yawning, especially psychological "contagious" yawning, may have developed as a way of keeping a group of animals alert and bonding members of a group into a more unit one. If an animal is drowsy or bored, it may not be as alert as it should to be prepared to spring into action and its yawning is practically saying, "Hey, I need some rest, you stay awake". Therefore, a contagious yawn could be an instinctual reaction to a signal from one member of the herd reminding the others to stay alert when danger comes. So the theory suggests evidence that yawning comes from the evolution of early humans to be ready to physically exert themselves at any given moment.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

Another theory shows that yawning is used for **30** _____ individuals into a tighter social unit. Alternatively, yawning can help increase alertness of group members in case **31** _____ is close. For example, yawning signals that a member of the group needs some **32** _____ and requires the others to stay aware of the surrounding situation. This theory proves that yawning is only a spontaneous behavior resulting from some part of a simple **33** _____ system in early humans.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 Which information is from Paragraph D?

A) Humans' imaginations can cause yawning.
B) Research shows that yawning is closely related to occupations.
C) An overview of the latest research in yawning.
D) Yawning is used to regulate brain temperature.

35 According to the results from the University of Albany...

A) There is no gender difference in the cause of yawning.
B) People with certain disorders are less likely to be affected by other people yawning.
C) Yawning is associated with the way people breathe.
D) People who are trained to feel empathy for others are more likely to yawn than those who are untrained.

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE BEATLES

The Fab Four, the famous Liverpool musical **Q1**_____ commonly known as The Beatles, reached the peak of their popularity in the 1960s. McCartney was a brilliant guitarist, so they let him join the group at once. The group changed its name several times, from Johnny and the Moondogs to Long John and the Silver Beatles and finally The Beatles. The short title is in itself a smart mixture of two words. The beat is a synonym for musical rhythm, while the beetles describe insects producing sounds using their shiny wings.

Lennon, Harrison, McCartney and Starr were the core members of The Beatles while the other **Q2**_____ constantly changed. Many guitarists and drummers joined but finally **Q3** _____ the group. The style changed too. When The Beatles left Britain to perform in Europe, they turned from folk to rock-n-roll to win over the public. They also played foreign music and composed their own songs. Soon the group issued their first single, My Bonnie, which became **Q4**_____ in Liverpool. A customer once asked for it in a music shop, but there were no copies left. When Epstein, the **Q5**_____ owner, finally got the disc, he was surprised to hear a good quality **Q6**_____ by the group that played in the club next to his shop. The same month he signed the first contract with The Beatles as their musical agent.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. Mark your answers on the answer sheet.

A) LOCAL TREASURES. At Local Treasures, we offer a wide selection of souvenirs that reflect the local culture and heritage. From handmade crafts to locally sourced snacks, we have everything you need to take a piece of our town back home with you. Don't miss our summer clearance sale! Open every day from 9 AM to 6 PM.

B) CHIC BOUTIQUE. At Chic Boutique, we pride ourselves on offering unique and trendy clothing items that you won't find anywhere else. From vintage-inspired dresses to edgy accessories, we have it all. Visit us now and enjoy our summer sale! Open Monday to Saturday from 10 AM to 7 PM.

C) ROCK SHOP. At Rock Shop, we have everything for the music lover in you! From T-shirts to vinyl records, we offer a wide range of merchandise from your favorite bands. Don't miss our clearance sale on selected items. Open every day from 11 AM to 8 PM.

D) SUMMER BREEZE. Get ready for summer with our latest collection! From colorful sundresses to cute shorts, Summer Breeze has everything you need to stay stylish and comfortable. Don't miss our special discounts on selected items. Open every day from 10 AM to 8 PM.

E) CURVES IN STYLE. At Curves in Style, we believe that every woman should feel confident and stylish, no matter her size. That's why we offer a variety of plus-size clothing options in various styles and sizes. Visit us now and enjoy our summer sale! Open Tuesday to Sunday from 11 AM to 8 PM.

F) KIDS' KINGDOM. At Kids' Kingdom, we cater to all your children's clothing needs. From cute baby clothes to trendy outfits for older kids, our store has it all. Don't miss our back-to-school sale! Open every day from 10 AM to 7 PM.

G) SPORTS CENTRAL. At Sports Central, we have everything for the ultimate sports fan! From jerseys to hats, we offer a wide selection of merchandise from your favorite teams in various sports. Don't miss our summer discount! Open every day from 9 AM to 9 PM.

H) BRIDAL BLISS. At Bridal Bliss, we understand that finding the perfect wedding dress is crucial for your big day. Our expert staff will help you find the dress of your dreams from our extensive collection of designer gowns. Book your appointment now and enjoy our summer discount! Open Tuesday to Saturday from 11 AM to 7 PM.

I) TAILOR MADE. At Tailor Made, we understand the importance of a well-tailored suit. Our experienced staff will help you find the perfect fit from our extensive collection of premium suits, shirts, and accessories. Visit us today and take advantage of our summer sale! Open Monday to Saturday from 9 AM to 6 PM.

J) FIT NATION. Get ready to hit the gym with our collection of high-quality activewear. From leggings to sports bras, Fit Nation has everything you need to stay comfortable and stylish while you workout. Don't miss our summer clearance sale! Open Monday to Friday from 8 AM to 9 PM.

7

Sarah

Sarah is a fashion-forward college student who is looking for trendy summer clothes. She wants to find a store with a variety of options and affordable prices. She usually goes shopping at 7pm.

8

John

John is a businessman who needs a new suit for an upcoming conference. He wants a store with high-quality suits and excellent customer service. He goes back to his house at 5 pm and goes shopping while returning.

9

Maria

Maria is a busy mom who wants to buy clothes for her kids. She needs a store that offers a range of sizes and styles for both boys and girls. She would like a shop which is 24/7.

10

Tom

Tom is a fitness enthusiast who wants to buy new workout clothes. He needs a store that offers comfortable and durable activewear. He goes shopping on Thursdays afternoon.

11

Emily

Emily is a bride-to-be who wants to buy a wedding dress. She needs a store that offers a wide range of options and personalized service. She is planning to make herself available on Wednesday afternoon.

12

Jake

Jake is a music enthusiast who wants to buy band merchandise. He needs a store that offers a variety of options from different bands. He can go shopping anytime.

13

Tina

Tina is a fashion blogger who wants to buy unique and trendy clothes for her blog. She needs a store that offers one-of-a-kind items. She can't go shopping on Sunday.

14

Mike

Mike is a sports fan who wants to buy a jersey of his favourite team. He needs a store that offers a variety of options from different sports. He can go shopping everyday but he has no time when he is at work.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Remembering the 3D's
B) Having Self-Belief
C) Taking Action
D) Choosing a Course of Action
E) Staying Focused
F) Investing Money
G) Having Commitment
H) Setting Goals

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

BECOMING SUCCESSFUL

I. One of the first steps in the process of becoming successful is to make the decision to achieve something. All of us know that nothing can move forward until that first decision to do so is made. The initial action is always the decision to go ahead, which many people tend to overlook. So, decide on moving forward, put your decision down in writing, just to keep it in focus, and then carry on from there.

II. Having clarity of vision and purpose is perhaps one of the most important factors of achieving success. The fact is that most people simply have no idea about what they really want. Clarity means understanding exactly what you want and how it will affect your life. Once you acquire clarity of vision and purpose, the next vital step of becoming successful is determining aims you want to achieve.

III. You should be able to accomplish what you set out to do with unwavering concentration. Life is full of distractions — TV, family, e-mail and telephones — all of which can be completely overwhelming. How can you concentrate on your goals? Willpower is one of the factors although willpower alone will not be sufficient to achieve your aims. One of the best ways is to make a plan and then stick to it.

IV. Before beginning any new activity, examine it to see if it will help in moving you nearer to your goals. If a certain activity can be put away for a later time, defer it. If that activity can be done by somebody else, delegate it. And if it does not really need to be done at all, it can be deleted. This kind of close examination of each activity will help in keeping you focused on the things that are really important.

V. Success often involves being willing to pay the price that everything has. The price may not be in monetary terms. It could be sacrifice, effort, time, and also money, or maybe something else. The point is that in order to become successful, you must be ready to work hard and to put all your effort into achieving your purpose. Success takes a lot of dedication.

VI. Lack of confidence is one of the biggest hurdles that many people need to get over in order to become successful. People often think they are not good enough or not smart enough, which can actually prevent them from finding the success they seek. It is common knowledge that if you think you can do

something, you will, and conversely, if you think that it cannot be done, it will lead to failure.

PART 4 Questions 21–29

Read the following text and choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

SCOUTS

On January 24, 1908, the Boy Scout movement started in England with the publication of Robert Baden-Powell's handbook Scouting for Boys. The name Baden-Powell, a brave officer, was already well-known to many English boys, and thousands of them eagerly bought the handbook. By the end of April, numerous Boy Scout troops had appeared across Britain. In 1900, General Baden-Powell became a national hero in Britain for his 217-day defence of Mafeking in the Second Boer War in South Africa. Soon after, his military field manual, Aids to Scouting, written for British soldiers in 1899, became popular with a younger audience. Boys loved the lessons on tracking and observation and organized outdoor games using the book. Hearing this, Baden-Powell decided to write a non-military field manual for teenagers that would also emphasize the importance of morality and good deeds. First, however, he decided to try out some of his ideas on an actual group of boys. On July 25, 1907, he took a diverse group of 21 boys to Brownsea Island in Dorset, where they set up camp for two weeks. With the aid of other instructors, he taught the boys about camping, observation, deduction, woodcraft, boating, life saving, and good manners. Many of these lessons were learned through original games that were very popular with the boys. The first Boy Scout meeting was a great success. Soon the handbook Scouting for Boys appeared. With the success of Scouting for Boys, Baden-Powell set up a central Boy Scouts' office, which registered new Scouts and designed a uniform. By the end of 1908, there were 60,000 Boy Scouts, and troops began to appear in British Commonwealth countries across the globe. The Scout movement supported the boys in their physical, mental and spiritual development. The boys learned to work together to achieve goals, they also gave a promise to live by certain rules, and to help others when they could. In September 1909, the first national Boy Scout meeting was held at the Crystal Palace in London. Ten thousand Scouts showed up, including a group of uniformed girls who called themselves the Girl Scouts. A year later, Baden-Powell organized the Girl Guides as a separate organization. The American version of the Boy Scouts has its origins in an event that occurred in London in 1909. Chicago publisher William Boyce lost his way in the fog. So he stopped under a street light to read his map when he was approached by a young British boy. The boy asked the man if he could help and William Boyce explained that he had got lost. After guiding Boyce to his destination, the boy refused a tip, explaining that as a Boy Scout he would not accept payment for doing a good deed. This anonymous gesture inspired Boyce to organize several regional U.S. youth organizations. The Scouts movement soon spread throughout the country. In 1912, Juliette Gordon Low founded the Girl Scouts of America in Savannah, Georgia. In 1920 the first international Boy Scout Jamboree was held in London, and Robert Baden-Powell got the title Chief Scout of the World. The founder of the Scout organization died in 1941.

Nowadays, the Scouts Movement exists in 216 different countries all over the world, there are more than 28 million boy scouts and over 10 million girl scouts.

For questions 21-24, choose the correct answer A, B, C, or D.

21 It is stated that Robert Baden-Powell ...
A) was a popular name in the 19th century
B) was a secondary school teacher
C) didn't write books for a younger audience initially
D) fought many wars but couldn't win one

22 When was "Scouting for Boys" published?
A) 1900
B) 1907
C) 1908
D) 1920

23 The Girl Scouts first showed up ...
A) In 1912, USA
B) as a movement against the Boy Scouts
C) By the end of 1908
D) In 1910

24 We can infer from the passage that ...
A) There were various authors of the Boy Scouts who organized teenagers at the same time.
B) Robert Baden-Powell died in 1941
C) Although London was the centre of the Boy Scouts, there were more than 60,000 scouts in 1920.
D) Unlike military handbooks, Scouting for Boys wasn't published in London

For questions 25-29, decide if the following statements agree with the information given in the text.

25 The word scout was invented by Robert Baden-Powell.
A) True
B) False
C) Not Given

26 The first camp organized by Robert Baden-Powell on an island was a failure.
A) True
B) False
C) Not Given

27 The Boy Scouts' rules and the Girl Scouts' rules were different.
A) True
B) False
C) Not Given

28 William Boyce founded the Boy Scouts organization in the USA because he was impressed by the behavior of a British Scout.
A) True
B) False
C) Not Given

29 Robert Baden-Powell was awarded the title Chief Scout of the World after his death.
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE CACAO: A SWEET HISTORY

Chapter 1 Most people today think of chocolate as something sweet to eat or drink that can be easily found in stores around the world. It might surprise you that chocolate was once highly treasured. The tasty secret of the cacao (Kah Kow) tree was discovered 2,000 years ago in the tropical rainforests of the Americas. The story of how chocolate grew from a local Mesoamerican beverage into a global sweet encompasses many cultures and continents.

Chapter 2 Historians believe the Maya people of Central America first learned to farm cacao plants around two thousand years ago. The Maya took cacao trees from the rainforests and grew them in their gardens. They cooked cacao seeds, then crushed them into a soft paste. They mixed the paste with water and flavorful spices to make an unsweetened chocolate drink. The Maya poured the chocolate drink back and forth between two containers so that the liquid would have a layer of bubbles or foam. Cacao and chocolate were an important part of Maya culture. There are often images of cacao plants on Maya buildings and art objects. Ruling families drank chocolate at special ceremonies. And, even poorer members of society could enjoy the drink once in a while. Historians believe that cacao seeds were also used in marriage ceremonies as a sign of the union between a husband and a wife. The Aztec culture in current-day Mexico also prized chocolate. But, cacao plants could not grow in the area where the Aztecs lived. So, they traded to get cacao. They even used cacao seeds as a form of money to pay taxes. Chocolate also played a special role in both Maya and Aztec royal and religious events. Priests presented cacao seeds and offerings to the gods and served chocolate drinks during sacred ceremonies. Only the very wealthy in Aztec societies could afford to drink chocolate because cacao was so valuable. The Aztec ruler Montezuma was believed to drink fifty cups of chocolate every day. Some experts believe the word for chocolate came from the Aztec word "xocolatl," which in the Nahuatl language means "bitter water." Others believe the word "chocolate" was created by combining Mayan and Nahuatl words.

Chapter 3 The explorer Christopher Columbus brought cacao seeds to Spain after his trip to Central America in 1502. But it was the Spanish explorer Hernando Cortes who understood that chocolate could be a valuable investment. In 1519, Cortes arrived in current-day Mexico. He believed the chocolate drink would become popular with Spaniards. After the Spanish soldiers defeated the Aztec empire, they were able to seize the supplies of cacao and send them home. Spain later began planting cacao in its colonies in the Americans in order to satisfy the large demand for chocolate. The wealthy people of Spain first enjoyed a sweetened version of chocolate drink. Later, the popularity of the drink spread throughout Europe. The English, Dutch and French began to plant cacao trees in their own colonies. Chocolate remained a drink that only wealthy people could afford to drink until the eighteenth century. During the period known as the Industrial Revolution, new technologies helped make chocolate less costly to produce.

Chapter 4 Farmers grow cacao trees in many countries in Africa, Central and South America. The trees grow in the shady areas of the rainforests near the Earth's equator. But these trees can be difficult to grow. They require an exact amount of water, warmth, soil and protection. After about five years, cacao trees start producing large fruits called pods, which grow near the trunk of the tree. The seeds inside the pods are harvested to make chocolate. There are several kinds of cacao trees. Most of the world's chocolate is made from the seed of the forastero tree. But farmers can also grow criollo or trinitario cacao plants. Cacao trees grown on farms are much more easily threatened by diseases and insects than wild trees. Growing cacao is very hard work for farmers. They sell their harvest on a futures market. This means that economic conditions beyond their control can affect the amount of money they will earn. Today, chocolate industry officials, activists, and scientists are working with farmers. They are trying to make sure that cacao can be grown in a way that is fair to the timers and safe for the environment.

Chapter 5 To become chocolate, cacao seeds go through a long production process in a factory. Workers must sort, clean and cook the seeds. Then they break off the covering of the seeds so that only the inside fruit, or nibs, remain. Workers crush the nibs into a soft substance called chocolate liquor. This gets separated into cocoa solids and fat called cocoa butter. Chocolate makers have their own special recipes in which they combine chocolate liquor with exact amounts of sugar, milk and cocoa fat. They finely crush this "crumb" mixture in order to make it smooth. The mixture then goes through two more processes before it is shaped into a mold form.

Chocolate making is big business. The market value of the yearly cacao crop around the world is more than five billion dollars. Chocolate is especially popular in Europe and the United States. For example, in 2005, the United States bought 1.4 billion dollars' worth of cocoa products. Each year, Americans eat an average of more than five kilograms of chocolate per person. Speciality shops that sell costly chocolates are also very popular. Many offer chocolate lovers the chance to taste chocolates grown in different areas of the world.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

CACAO SEEDS

↓ sorting, cleaning and cooking ridding seeds of their **30** _____

Nibs

↓ crushing

31 _____ liquor

↓

Add sugar, milk and **32** _____ fat.

Crumb mixture

↓

Crush finely then come into a shape in a **33** _____

Chocolate

For questions 34-35, choose the correct answer A, B, C, or D.

34 Which of this following information is stated in Chapter 4?

A) average chocolate consumption by people in the US per person per year
B) the part of cacao trees used to produce chocolate
C) where the first sweetened chocolate drink appeared
D) how ancient American civilizations obtained cacao

35 Which of the following statements agree with the information given in the passage?

A) use cacao and chocolate in ceremonies were restricted Maya royal families
B) The Spanish explorer Hernando Cortes invested in chocolate and chocolate drinks.
C) The forastero tree produces the best chocolate.
D) some parts in cacao seed are get rid of during the chocolate process

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

CAN MACHINES THINK?

How can you tell if you are talking to a computer? New **Q1** _____ programs called language models have gotten very good at mimicking people. It can be really hard to tell if you're talking to a person or a computer. Can a machine think? Philosophers have been trying to answer this question for hundreds of years. It's surprisingly tricky to come up with a good answer! Alan Turing was a computer scientist who thought a lot about artificial intelligence (AI). He had an idea for a different way to test intelligence. Instead of measuring **Q2**_____ directly, what if you measured intelligent behavior? Can a computer answer questions in a human-like way? If a computer can respond to you so well that you can't tell whether it is a computer or a person, we say that it passes the Turing test.

Recently, computer programs called language models have gotten much better at mimicking **Q3**_____ language. These AI **Q4**_____ analyze millions of sentences from books and websites to learn hidden patterns in language. It's exciting to see AI generating realistic sentences. But there are also problems with AI-generated text. People have used AI-generated **Q5**_____ to cheat on tests. Chatbots can give harmful advice. And scammers can use AI to generate fake information so they can trick **Q6**_____.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You want a personal service.

B) You want visit a lakeside hotel during summer.

C) You want someone to go fishing for you.

D) You want to go someplace unique with nice foods during your holidays.

E) This hotel is suitable for exploration, visiting a beach etc.

F) This hotel is near docks.

G) You are looking for a reliable hotel to visit in autumn.

H) You want to visit beaches during September and October.

I) This hotel is a beach and has some relaxing facilities.

J) This place has golf and a fitness centre.

7

HIGHBULLEN HOTEL - GOLF AND COUNTRY CLUB

Spectacular scenery with sporting, golf and leisure facilities. State of the art "Life Fitness" Gym, Health and Beauty suite with Sauna. Offering excellent cuisine and all within easy reach of the M5. 01769 540561 www.highbullen.co.uk

8

THE FAT LAMB COUNTRY INN - RAVENSDALE CUMBRIA

Award winning hotel situated in magnificent scenery between Lakes and Dales. Informal, warm and comfortable. SPECIAL TELEGRAPH SUMMER BREAKS AVAILABLE BROCHURE - 015396 23242 www.fatlamb.co.uk

9

NORTH WALES

Enjoy the break of a lifetime any 3 nights for the price of 2. Just 20 minutes from Chester yet surrounded by 4000 acres of Welsh countryside. Award winning team of chefs. Log fires. Peace. Tel: 08707 292 292 www.bodidrishall.com

10

POLURRIAN HOTEL - MULLION, LIZARD PENINSULAR

Overlooking sandy cove and surrounded by N.T. Coastline. Sea and Fresh Cornish air. Exceptional leisure facilities. Tel: 01326 240421 www.polurrianhotel.com

11

The Berry Head Hotel - Brixham South Devon

Steeped in history, nestling on the water's edge - near picturesque fishing port. Suburb location for walking, sailing and fishing. Brochure Tel: 01803 8532225 www.berryheadhotel.com

12

ROYAL YORK FAULKNER HOTEL - SIDMOUTH

Charming, well run promenade regency hotel. All amenities, excellent leisure facilities and renowned personal service. FREEPHONE: 0800 220714 www.royalyorkhotel.net

13

BLAKENEY HOTEL - BLAKENEY, NORFOLK

Traditional privately owned friendly hotel overlooking the estuary. Ideal to explore Norfolk coast and countryside. Tel: 01263 740797 www.blakenly-hotel.co.uk

14

The Cottage Hotel - Hope Cove, Salcombe, Devon

AUGUST AND SEPTEMBER AVAILABILITY. Family run for 30 successful years. First class service. www.hopecove.com Tel: 01548 561555

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A taste of everything
B) Shop till you drop
C) City's tourist attractions
D) Ancient traditions live on
E) Activities for the adventurous and hardy
F) On the crossroads of religions
G) For the body, mind and soul
H) From the high peaks to the deep seas

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

JAKARTA

I. Today Jakarta has much to offer, ranging from museums, art and antique markets, first class shopping to accommodations and a wide variety of cultural activities. Jakarta's most famous landmark, the National Monument or Monas is a 137m obelisk topped with a flame sculpture coated with 35 kg of gold. Among other places one can mention the National museum that holds an extensive collection of ethnographic artifacts and relics, the Maritime Museum that exhibits Indonesia's seafaring traditions, including models of sea going vessels.

II. Sumatra is a paradise for nature lovers, its national parks are the largest in the world, home to a variety of monkeys, tigers and elephants. Facing the open sea, the western coastline of Sumatra and the waters surrounding Nias Island have big waves that make them one of the best surfer's beaches in Indonesia. There are beautiful coral reefs that are ideal for diving. For those who prefer night dives, the waters of Riau Archipelago offer a rewarding experience with marine scavengers of the dark waters.

III. Various establishments offer professional pampering service with floral baths, body scrubs, aromatic oils, massages and meditation; rituals and treatments that use spices and aromatic herbs to promote physical and mental wellness. Various spa hotels are extremely popular. Indonesians believe that when treating the body you cure the mind.

IV. Jakarta has a distinctly cosmopolitan flavor. Tantalize your taste buds with a gastronomic spree around the city's many eateries. Like French gourmet dining, exotic Asian cuisine, American fast food, stylish cafes, restaurants all compete to find a way into your heart through your stomach. The taste of Indonesia's many cultures can be found in almost any corner of the city: hot and spicy food from West Sumatra, sweet tastes of Dental Java, the tangy fish dishes of North Sulawesi.

V. In the face of constant exposure to modernization and foreign influences, the native people still faithfully cling to their culture and rituals. The pre-Hindu Bali Aga tribe still maintains their own traditions of architecture, pagan religion, dance and music, such as unique rituals of dances and gladiator-like battles between youths. On the island of Siberut native tribes have retained their Neolithic hunter-gathering culture.

VI. Whether you are a serious spender or half hearted shopper, there is sure to be something for everybody in Jakarta. Catering to diverse tastes and pockets, the wide variety of things you can buy in Jakarta is mind boggling from the best of local handicrafts to haute couture labels. Modern super and hyper markets, multi-level shopping centers, retail and specialty shops, sell quality goods at a competitive price. Sidewalk bargains range from tropical blooms of vivid colors and scents in attractive bouquets to luscious fruits of the seasons.

PART 4

Questions 21–29

Read the following text for questions 21-29.

A GOOD NIGHT'S SLEEP — AN IMPOSSIBLE DREAM?

Tonight, do yourself a favor. Shut off the TV, log off the Internet and unplug the phone. Relax, take a bath, maybe sip some herbal tea. Then move into the bedroom. Set your alarm clock for a time no less than eight hours in the future, fluff up your pillows and lay your head down for a peaceful night of restorative shut-eye. That's what American doctors advise.

American sleep experts are sounding an alarm over America's sleep deficit. They say Americans are a somnambulant nation, stumbling groggily through their waking hours for lack of sufficient sleep. They are working longer days — and, increasingly, nights — and they are playing longer, too, as TV and the Internet expand the range of round-the-clock entertainment options. By some estimates, Americans are sleeping as much as an hour and a half less per night than they did at the turn of the century — and the problem is likely to get worse.

The health repercussions of sleep deprivation are not well understood, but sleep researchers point to ills ranging from heart problems to depression. In a famous experiment conducted at the University of Chicago in 1988, rats kept from sleeping died after two and a half weeks. People are not likely to drop dead in the same way, but sleep deprivation may cost them their lives indirectly, when an exhausted doctor prescribes the wrong dosage or a sleepy driver weaves into someone's lane.

What irritates sleep experts most is the fact that much sleep deprivation is voluntary. "People have regarded sleep as a commodity that they could shortchange," says one of them. "It's been considered a mark of very hard work and upward mobility to get very little sleep. It's a macho attitude." Slumber scientists hope that attitude will change. They say people have learned to modify their behavior in terms of lowering their cholesterol and increasing exercise. Doctors also think people need to be educated that allowing enough time for sleep and taking strategic naps are the most reliable ways to promote alertness behind the wheel and on the job.

Well, naps would be nice, but at the moment, employers tend to frown on them. And what about the increasing numbers of people who work at night? Not only must they work while their bodies' light-activated circadian rhythms tell them to sleep, they also find it tough to get to sleep after work. Biologists say night workers have a hard time not paying attention to the 9-to-5 day because of noises or family obligations or that's the only time they can go to the dentist. There are not too many dentists open at midnight.

As one might imagine, companies are springing up to take advantage of sleeplessness. One of the companies makes specially designed shift-work lighting systems intended to keep workers alert around the clock. Shiftwork's theory is that bright light, delivered in a controlled fashion, can help adjust people's biological clocks. The company president says they are using light like a medicine. So far, such special lighting has been the province of NASA astronauts and nuclear power plant workers. He thinks that in the future, such systems may pop up in places like hospitals and 24-hour credit-card processing centers. Other researchers are experimenting with everything from welder's goggles (which night workers wear during the day) to human growth hormones. And, of course, there is always what doctors refer to as "therapeutic caffeine use", but everyone is already familiar with that.

For questions 21-24, choose the correct answer A, B, C, or D.

21 **The advice of American doctors is all about ...**
A) ways to reduce negative effect of modern technologies.
B) complex measures that ensure healthy sleep.
C) positive effect of herbal therapy.
D) the process of restoring from unexpected psychological stress.

22 **Having naps during the day would be nice, but ...**
A) doctors do not find them effective.
B) people won't take them voluntarily.
C) bosses are against this.
D) it is difficult to arrange.

23 **People who work at night can hardly ...**
A) fulfill traditional family obligations.
B) consult doctors when needed.
C) socialize to their liking.
D) ever sleep without ear-plugs.

24 **The main aim of specially designed shift-work lighting system is ...**
A) to help people feel alert at night.
B) to provide better lightning.
C) to prevent heart diseases.
D) to stimulate human growth hormones.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 **If people are kept from sleeping for two weeks, they will most likely die.**
A) True
B) False
C) Not Given

26 **Experts claim that working, entertaining and other factors are causing less and less time to sleep these days.**
A) True
B) False
C) Not Given

27 **At the beginning of the century, people went to sleep and awakened more earlier than nowadays.**
A) True
B) False
C) Not Given

28 **The bad fact is that people want to sleep less themselves.**
A) True
B) False
C) Not Given

29 **Some companies such has NASA are planning to use shiftwork light systems in the future.**
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

A HOME-SEWING REVIVAL: THE RETURN OF CLOTHKITS

In the 1970s, Clothkits revolutionised home sewing. Later, a woman from Sussex, England, revived the nostalgic brand and brought it up to date.

'I can't remember many of the clothes I wore before I was six, but I have a vivid memory of a certain skirt whose patterns I can still trace in my mind. It was wraparound, with a belt that threaded through itself, decorated with cats in two shades of green. I wore it with a knitted red jersey my mum bought in a jumble sale, and brown sandals with flowers cut into the toes. It was 1979, and I was not yet five. I forgot about that skirt for a long time, but when a girlfriend mentioned the name Clothkits while we were chatting, it was as if a door suddenly opened on a moment in the past that resonated with vivid significance for me.' The brand, founded in 1968, had by the late 1980s mostly vanished from people's lives, but by a combination of determination and luck Kay Mawer brought it back.

Clothkits was created by the designer Anne Kennedy, who came up with the ingenious idea of printing a pattern straight on to coloured fabric so that a paper pattern was not needed. It was accompanied by instructions that almost anyone could follow on how to cut the pieces out and sew them together. 'I was rebelling against the formulaic lines of textile design at that time,' Kennedy says. 'My interest was in folk art and clothes that were simple to make as I had lots of unfinished sewing disasters in my cupboard.'

Clothkits has always embodied the spirit of the late 1960s and 1970s. Its initial design was a dress in a geometric stripe in orange, pink, turquoise and purple. It cost 25 shillings (£1.25), and after it was featured in the Observer newspaper, Kennedy received more than £2,000 worth of orders. She ran the company from Lewes in Sussex, where at its peak it employed more than 400 people, selling to 44 countries worldwide. Sew-

your-own kits formed the core of the business, supplemented by knitwear. Kennedy's children demonstrated the patterns by wearing them in photographs.

Kennedy sold the company in the late 1980s. There had been a few administrative problems with postal strikes and a new computer system, which back then took up an entire room, 'but the times were changing as well,' she says. 'More women were going out to work and sewing less for their children.' She sold the company to one of her suppliers, who then sold it on to Freeman's, which ran Clothkits alongside its own brand for a while, using Kennedy's impressive database, but its ethos are big, corporate company did not sit well alongside the alternative and artistic of Clothkits. In 1991, Clothkits was made dormant, and there the story may have ended, were it not for Mawer's fascination with discovering what happened Clothkits.

Mawer's mother bought her a sewing machine when she was ten and taught her basic pattern-cutting and garment construction, encouraging her to experiment with colour and design by trial and error. The first garment Mawer made was a pair of trousers, which she made by tracing around an existing pair of trousers. In her late twenties, she spent five years working on digital and sculptural installations. 'It was an amazing, mind-expanding experience, but I knew it was unlikely I could make a living as a practising artist. I was definitely looking for a way that I could work in a creative industry with a commercial edge.' The experience inspired Mawer to return to education, studying for a degree in fine art at the University of Chichester. Her passion for vintage fabric, which her mother had encouraged her to start collecting, led her back to Clothkits, and from there to a journey into the heart of Freeman's. Negotiations with the company took 18 months, but in October 2007 Clothkits was hers.

The ethos of Clothkits remains the same, and Mawer is proud that her fabric is printed either in London or the north of England, and that packaging is kept to an absolute minimum. 'I wanted to feel that everyone involved in the brand, from design to production, was part of a process I could witness. I couldn't see the point of manufacturing on the other side of the world, as that's not what Clothkits has ever been about.' The revival of Clothkits has also, of course, coincided with a growing sense of dissatisfaction at our disposable society, and the resulting resurgence of interest in skills such as sewing and knitting. 'Making your own clothes gives you a greater appreciation of the craftsmanship in the construction of a garment,' Mawer says. 'When you know the process involved in making a skirt, you treasure it in a way you wouldn't if you'd bought it from a mass-producing manufacturer.'

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

The early days of Clothkits

Clothkits was started by a designer named Anne Kennedy. Her clothing company specialised in selling **30** _____ with a pattern printed on it. This came with instructions which meant that buyers were able to make their own garments.

The very first garment Anne Kennedy made was a multi-coloured striped dress with a **31** _____ pattern. A **32** _____ article led to many orders for this from around the world. As the company grew, she increased her workforce, and also sold **33** _____ as part of her business. She exhibited her designs using her children as models.

For questions 34-35, choose the correct answer A, B, C, or D.

34 What does the reader learn about Clothkits in the 1960s and 1970s?

A) Its designs represented the attitudes of the time.
B) Its products were only affordable for the wealthy.
C) Its creator tried many times to launch her company.
D) Its management was spread across numerous countries.

35 Why did Clothkits close in 1991?

A) There were unexpected staffing problems.
B) The funding for sewing activities was inadequate.
C) Freeman's was an unsuitable partner.
D) Records on Kennedy's database were lost.

UNIVERSITY EXAM PETITION

Final-year students at a university in England are angry after they took an economics exam. Students from the University of Sheffield have signed a petition to say the (1)**Q1**_____ questions were 'impossible' to answer. Nearly all of the 100 students who took the exam complained and signed the online petition. They want the university to look into this. The (2)**Q2**_____ say the exam contained questions on topics that were not in their course. They also say the (3)**Q3**_____ included a lot of difficult maths that they had not been taught. One student said a lecturer told them they would only need 'simple' (4)**Q4**_____. They are now worried that they will get low test scores, and that this will affect what kind of degree they get.

The head of the economics department, professor Andy Dickerson, told the BBC that the exam was fair. He said not all the questions needed maths. He said the level of maths in the exams was the same as the level taught to students on the course. Professor Dickerson also (5)**Q5**_____ all the exam questions were on topics the students had studied. He said: "All questions were based on topics taught in the (6)**Q6**_____ and for which further reading was provided." He added that one question in the exam used a term that students may not have seen before. He said this was no problem because the question explained the meaning of the term. The university said it would look carefully at the results.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You and your partner want to go somewhere to experience nature in its true form.

B) You want to escape to an island for a week.

C) This tour is fully virtual.

D) You can learn a lot about ancient history there.

E) You feel like you haven't visited a romantic city.

F) You want to conquer a peak in your adventurous journey.

G) You want to experience everything: historical places, mountains, local dishes and a cool relaxation in your journey.

H) This 5-day island escapade tour has boat trip in the evening.

I) You want to stay in Paris for a week.

J) You can seek a natural beauty in this city tour.

7

Global Wanderers

"Discover Paris, the city of love, for only $999! Includes a 5-day guided tour, accommodation, and airport transfers. Stroll through the Eiffel Tower, Louvre, and charming cafes. Book now at globalwanderers.com or call +1 555 789 1234."

8

Mystic Adventures Travel

"Explore the wonders of Machu Picchu for $1,499. Package includes a 7-day guided trek, meals, and a night in Cusco. Experience Peru's ancient mysticism. Call us today at +51 987 654 321 or visit mysticadventures.com."

9

Sunrise Safari Tours

"Embark on an African safari adventure for $2,799. Witness the Big Five in Kenya's Masai Mara Reserve. 10-day package includes accommodation, game drives, and meals. Email us at safaris@sunrise.com for details."

10

Island Bliss Getaways

"7 nights in the Maldives starting at $2,499 per person. Luxurious overwater villas, daily breakfast, and snorkeling tours included. Escape to paradise. Call +960 123 4567 or visit islandblissgetaways.com."

11

Northern Lights Expeditions

"Chase the Aurora Borealis in Iceland for $1,199. 4-day tour includes Reykjavik stays, guided northern lights hunts, and a Blue Lagoon visit. Reserve your spot at northernlightsxp.com or dial +354 456 7890."

12

Historic Horizons

"Immerse yourself in Rome's ancient beauty for just $1,099. Package includes 5 days of guided tours, Colosseum tickets, and accommodations near the Vatican. Contact us at explore@historichorizons.com."

13

Tropical Trails Agency

"5 nights in Bali for only $1,299. Package includes resort stays, guided temple tours, and a sunset cruise. Your tropical adventure awaits! Visit tropicaltrails.com or call +62 123 987 654."

14

Summit Seekers

"Conquer Mount Everest Base Camp for $2,999. A 12-day guided trek includes meals, porters, and accommodation. Perfect for thrill-seekers. Book now: summitseekers.com or call +977 555 4321."

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Art and life
B) In a railway museum
C) Airplane alternative
D) Long and special
E) Goods delivery
F) User and nature friendly
G) From steam to electricity
H) Not any more

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

LOCOMOTIVES

I. The invention of the steam locomotive made a breakthrough in the development of the railway system in the 19th century. Today the technology seems ordinary, but two hundred years ago it was revolutionary. Steam locomotives were fueled by burning coal, wood or oil, to produce steam in a boiler, which drove the engine. Of course, large amounts of water were also needed. In the 20th century, steam engines were gradually replaced with trains fueled by diesel or electricity.

II. Some long-distance passenger trains have become famous. For example, the Trans-Siberian Railway in Russia is the longest railway in the world, covering 9,259 kilometers and 10 time zones. In the United States, the California Zephyr travels between Chicago and San Francisco, and during the 3-day trip, passengers can enjoy amazing views of the Rocky Mountains. The Orient Express between Venice and Istanbul offers old-fashioned service that is luxurious, romantic, and expensive.

III. Of course, not all trains carry passengers. Many trains are freight trains, transporting goods from one location to another. The busiest freight system in the world is in China. Freight trains are usually much longer than passenger trains. The longest freight train recorded was in Australia with over 682 cars. Freight trains can carry anything — coal, cars, clothing — anything that people need. Refrigeration, which keeps food cold and fresh, revolutionized freight transportation.

IV. In many countries, overnight trains are a good option to air travel. For example, you might leave one city at 11:00 at night, and arrive at your destination at 7:00 the next morning. Typically, you share a cabin with three other people, who you might be travelling with, or who you might not know at all. Your seats become your beds and the price of your ticket includes your bedding. If you want, you can order tea and a snack from the cabin attendant.

V. Authors have been using trains in literature for as long as trains have been running. Indeed, it's hard to imagine some stories without a train in them. Even people who have never read Anna Karenina know how the famous novel's heroine dies at the end. Many American children learn the important lessons of optimism and hard-work reading the classic story The Little Engine that Could. And of course almost everyone on the planet knows about Hogwarts Express in the Harry Potter books.

VI. Many countries around the world are investing in high-speed trains. Today's high-speed railways are amazing. They can go twice as fast as regular trains, and they are designed for passenger comfort with spacious chairs, internet access, and multi-media entertainment. High speed rail makes it possible to move many more people much faster over longer distances. High speed rail also can help the environment because it is more energy efficient and reduces cars on the roads.

PART 4

Questions 21–29

Read the following text for questions 21-29.

DESERTS

Deserts are areas of land where there is almost no rainfall. The land can be rocky or sandy. Most deserts lie in hot zones although some are cold. Also, very hot deserts can be very cold at night. Very little grows in desert lands, although some plants can survive from water beneath the surface.

The animals which live in the desert have learned how to survive. Reptiles, insects, birds and some mammals live in deserts. **Camels** are mammals which can go for long periods of time without water. Very few people live in deserts. It is difficult to adjust to the hot, dry climate.

Only a fifth of the world's deserts are sand. **Sand** is made up of very small particles of stone. These particles have worn off rock in time by the wind. The rest of the desert area is stone of some kind, mountains, or various types of dry soil. Stony deserts are called **reg**. Rocky deserts are called **hamada**.

Not very many people live in desert areas. Some live at **oases**. These are spots in the desert that have a supply of water. The water comes from deep wells under the sand. Small towns can grow up around these oases. The residents keep farm animals and grow dates and olives. **Nomads** are farmers who wander from place to place in the desert. They use camels to travel from one oasis to another. The camels carry all of their possessions.

Animals which live in the desert usually go out at night when it is cooler. During the day they stay in the shade. The smaller ones dig burrows to stay in during the hot part of the day. The **kangaroo rat** does this as well. Reptiles in the desert can stand more heat than mammals. Their skin is waterproof and it helps them keep their body moisture.

Desert animals can go without water for a long time. Some, like the kangaroo rat, get water from plants. Desert birds travel to oases to find water. They can also get water from seeds or insects. Some animals can go for long periods of time without food. The scorpion is on one of these.

Few plants grow in the dry conditions of a desert. Some get their water from deep in the ground with long roots. Some can store water in leaves or stems. **Cactus** plants store a large amount of water. Some plants don't grow at all when it is dry. When rain appears, they shoot up from the ground. When the land dries up

again, the seeds lie dormant. They may sprout after the next rain or it can be many years before this happens.

Many desert areas are getting bigger. People try to use the land for grazing. They can graze it too often and make the land bare. They chop down the trees and hen rain doesn't come droughts occur. The wind blows the soil away. There is nothing to hold the soil in place. Mining can add to the creation of desert land. Governments in many countries are trying to save the land. They plant trees and they provide food for animals so they won't have to graze. They are teaching farmers new ways of farming to help preserve the soil.

In summary, deserts are regions with little or no rainfall. They can be sandy or rocky. Most deserts lie in hot climate areas, though some can be in cold zones. Nights in hot deserts are may be cold as well. Not many plants can survive in the dryness of the desert. The ones which do often get their water from deep in the ground.

For questions 21-24, choose the correct answer A, B, C, or D.

21 **Which of the following is an oasis?**
A) A dry spot in a valley
B) An area in the desert where water comes from the ground
C) A farm on grassy land
D) A small rounded mountain

22 **Where do desert plants get their water?**
A) From deep under the ground
B) Occasional rainfall
C) Oases
D) From very small rivers throughout the deserts

23 **Which of the following tells why desert areas are getting larger?**
A) Mining strips the land.
B) Farmers overgraze the land.
C) People chop down the trees.
D) All of the above.

24 **Nomads ...**
A) live at oases.
B) use camel to gain access to water.
C) travel from place to place in the desert.
D) often wonders why they live in the desert.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 **Deserts may be hot during the day and cool at night.**
A) True
B) False
C) Not Given

26 **Kangaroo rats dig burrows in the heat of the day.**
A) True
B) False
C) Not Given

27 **People who live in the desert plans to migrate to mild climates.**
A) True
B) False
C) Not Given

28 **Grazing leads to desertification.**
A) True
B) False
C) Not Given

29 **Governments aren't trying to save the land from desertification.**
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE HISTORY OF SALT

Salt is so simple and plentiful that we almost take it for granted. In chemical terms, salt is the combination "of a sodium ion with a chloride on, making it one of the most basic molecules on earth. It is also one of the most plentiful: it has been estimated that salt deposits under the state of Kansas alone could supply the entire world's needs for the next 250,000 years.

But is salt is also an essential element. Without it, life itself would be impossible since the human body requires the mineral in order to function properly. The concentration of sodium ions in the blood is directly related to the regulation of safe body fluid levels. And while we are all familiar with its many uses in cooking, we may not be aware that this element is used in some 14,000 commercial applications. From manufacturing pulp and paper to setting dyes in textiles and fabric, from producing soaps and detergents to making our roads safe in winter, salt plays an essential part in our daily lives.

Salt has a long and influential role in world history. From the dawn of civilization, it has been a key factor in economic, religious, social and political development. In every corner of the world, it has been the subject of superstition, folklore, and warfare, and has even been used as currency.

As a precious and portable commodity, salt has long been a cornerstone of economies throughout history. In fact, researcher M.R. Bloch conjectured that civilization began along the edges of the desert because of the natural surface deposits of salt found there. Bloch also believed that the first war – likely fought near the ancient city of Assault on the Jordan River – could have been fought over the city's precious supplies of the mineral.

In 2200 BC, the Chinese emperor Hsia Yu levied one of the first known taxes. He taxed salt. In Tibet, Marco Polo noted that tiny cakes of salt were pressed with images of the Grand Khan to be used as coins and to this day among the nomads of Ethiopia's Danakil Plains it is still used as money. Greek slave traders often bartered it for slaves, giving rise to the expression that someone was "not worth his salt." Roman legionnaires were paid in salt – a salarium, the Latin origin of the word "salary."

Merchants in 12th-century Timbuktu – the gateway to the Sahara Desert and the seat of scholars – valued this mineral as highly as books and gold. In France, Charles of Anjou levied the gabelle, a salt tax, in 1259 to finance his conquest of the Kingdom of Naples. Outrage over the gabelle fueled the French Revolution. Though the revolutionaries eliminated the tax shortly after Louis XVI, the Republic of France re-established the

gabelle in the early 19th Century; only in 1946 was it removed from the books.

The Erie Canal, an engineering marvel that connected the Great Lakes to New York's Hudson River in 1825, was called "the ditch that salt built." Salt tax revenues paid for half the cost of construction of the canal. The British monarchy supported itself with high salt taxes, leading to a bustling black market for the white crystal. In 1785, the earl of Dundonald wrote that every year in England, 10,000 people were arrested for salt smuggling. And protesting against British rule in 1930, Mahatma Gandhi led a 200-mile march to the Arabian Ocean to collect untaxed salt for India's poor.

In religion and culture, salt long held an important place with Greek worshippers consecrating it in their rituals. Further, in Buddhist tradition, salt repels evil spirits, which is why it is customary to throw it over your shoulder before entering your house after a funeral: it scares off any evil spirits that may be clinging to your back. Shinto religion also uses it to purify an area. Before sumo wrestlers enter the ring for a match – which is, in reality, an elaborate Shinto rite – a handful is thrown into the center to drive off malevolent spirits.

In the Southwest of the United States, the Pueblo worship the Salt Mother. Other native tribes had significant restrictions on who was permitted to eat salt Hopi legend holds that the angry Warrior Twins punished mankind by placing valuable salt deposits far from civilization, requiring hard work and bravery to harvest the precious mineral. Today, a gift of salt endures in India as a potent symbol of good luck and a reference to Mahatma Gandhi's liberation of India.

The effects of salt deficiency are highlighted in times of war, when human bodies and national economies are strained to their limits. Thousands of Napoleon's troops died during the French retreat from Moscow due to inadequate wound healing and lowered resistance to disease – the results of salt deficiency.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

Salt is such an essential **30** _____ that people would not be able to live without it. As well as its uses in cooking, this basic mineral has thousands of business **31** _____ ranging from making paper to the manufacture of soap. Being a prized and portable commodity, it has played a major part in the economies of many countries. As such, salt has not only led to war, but has also been used to raise **32** _____ by governments in many parts of the world. There are also many instances of its place in religion and culture, being used as a means to get rid of evil **33** _____.

For questions 34-35, choose the correct answer A, B, C, or D.

34 Which of these statements is true of salt according to the passage?

A) A number of cities take their name from the word salt.
B) Salt has been produced in China for less than 2000 years.
C) Slaves used salt as a currency.
D) There are many commercial applications for salt.

35 In this passage, the author argues that ...

A) salt's importance throughout the history has always been misrepresented.
B) salt is no longer used as a form of currency.
C) the first war may have been started over salt.
D) salt has been regarded as precious and dangerous in the ancient times.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

HEALTH AND EDUCATION

Lots of factors contribute to how healthy a person is. Some of these are obvious, like the medical care they receive. But some less **Q1**_____ factors can be even more important! **Q2**_____ determinants of health are the non-medical factors that impact our well-being. These are the personal circumstances that shape your daily life. Some examples include access to food, housing, healthcare, social support, and education. Research shows that social determinants of health have a big effect on our health. They also contribute to **Q3**_____ inequities. For example, getting more education leads to better employment, higher income, and access to healthcare. And all of these improve overall health. So, people with **Q4**_____ education tend to have higher life expectancies than people with less education. We knew from other studies that more **Q5**_____ is associated with longer lives. But no one had calculated exactly how much longer. We wanted to figure out how much mortality risk goes down with each year of schooling. In other words, how does education lower a person's risk of death? Of course, everyone still dies, but a lower mortality **Q6**_____ means a higher chance of a long life.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You want something made from cherry wood.

B) You want to make something to get yourself and your family members clean as well as relaxing.

C) They will set-up your entertainment systems.

D) You want to set up a TV yourself.

E) Extra space for your room.

F) You want to store your high-quality drinks.

G) You need a big bed for your room.

H) You set the table with these.

I) You are looking for a discount.

J) Big or small – just for your books.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Dangers beneath the surface
B) A source of literary inspiration
C) Flooding creates farmland
D) Rivers sustain life
E) Home to extraordinary nature
F) Growth brings environmental damage
G) Connecting nations
H) An ancient civilization's lifeline

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

RIVERS

I. Rivers have been essential to human life since the beginning of civilization. They provide fresh water for drinking, water for irrigating crops, and transportation routes for trade and travel. Many of the world's greatest cities were founded on the banks of rivers, including London on the Thames, Paris on the Seine, and Cairo on the Nile. Rivers also support rich ecosystems, home to thousands of species of fish, birds, and other wildlife. Even today, billions of people around the world depend on rivers for their daily survival.

II. The Nile is often considered the longest river in the world, stretching approximately 6,650 kilometers through northeastern Africa. It was the backbone of one of the greatest civilizations in history: ancient Egypt. The Pharaohs built temples, pyramids, and entire cities along its banks. The river provided water, food, and a transportation route through the desert. The ancient Egyptians worshipped the Nile as a god, and their entire calendar was based on the river's annual flood cycle.

III. Each year, heavy rains in the mountains of East Africa cause the Nile to rise and overflow its banks. When the waters recede, they leave behind a thick layer of dark, fertile silt. For thousands of years, Egyptian farmers have used this rich soil to grow their crops. The annual flooding of the river creates rich agricultural soil, ideal for growing wheat and flax and other crops.

IV. When people think of the Mississippi River, their first thought is usually of Mark Twain and the adventures of Tom Sawyer and Huck Finn. They may not recall from their childhood geography lessons that the Mississippi is the fourth longest river in the world. For thousands of years, Native Americans lived along the Mississippi, mostly living as hunter-gatherers and herders. That life changed forever when Europeans first arrived in the 16th century; today the Mississippi plays a crucial role in the economic life of dozens of cities and small towns situated along its shores.

V. The third longest river is the Yangtze River in China. The river plays a very important role in China's history, culture and economy. Nearly one-third of China's huge population lives along the Yangtze river. The Yangtze is one of the world's busiest waterways. Everything is transported along the Yangtze: coal, cars, produce and people. The river also attracts many tourists who take cruises through the famous Three Gorges area. Sadly, because of the heavy traffic on the river and industry along its, banks the Yangtze is very polluted.

VI. The Nile may still earn the title for longest river, but the Amazon — the second longest — has the greatest volume by far. The Amazon contains approximately one-fifth of the water flowing in the world's rivers. Uniquely, there are no bridges crossing the Amazon anywhere along its long route. Most of the Amazon flows through tropical rainforests, where there are few roads or cities — and therefore no need for bridges. The Amazon Rainforest is the home of more than one-third of all animal and plant species in the world.

PART 4

Questions 21–29

Read the following text for questions 21-29.

SILK ROAD LEADS FROM UZBEKISTAN TO LONDON FOR LANDMARK EXHIBITION

A monumental six-metre-long wall painting created in the 7th century, and 8th-century ivory figures carved for one of the world's oldest surviving chess sets, are among treasures set to be seen in Britain for the first time. The items will travel from the ancient city of Samarkand to the UK for an exhibition opening in September, as part of the first-ever loan from museums in Uzbekistan to the British Museum.

Silk Roads, a groundbreaking exhibition spanning AD500 to 1000, will go beyond the popular image of trade between east and west, with camel caravans and merchants selling silks and spices in bazaars, to explore connections between cultures and continents, centuries before the development of today's globalised world. It will show that, rather than a single trade route, there were overlapping networks linking communities across Asia, Africa and Europe. More than 300 objects will include loans from 29 national and international institutions, many on display in the UK for the first time. Tickets for the exhibition, which runs until February, go on sale on Monday.

Yu-ping Luk, one of the lead curators of the show, said: "We will of course have camels, and there will be silk and references to camel caravans that are also a very important part of the Silk Roads. But we wanted to go beyond that and tell a richer story of the networks in multiple directions, not just east-west but north-south and elsewhere, and also the movement of objects, peoples and ideas." The six-metre wall painting, a vibrant depiction of a procession of people riding camels, horses and an elephant, is from the "Hall of the Ambassadors" in Samarkand. Dating from the 660s and part of a series excavated in the 1960s, it is an unparalleled example of art created by the region's ancient Sogdians, who were great traders. Its title derives from its portrayal of peoples of different origins, from neighbouring regions and as far as the Korean peninsula, who were coming to Samarkand to trade.

Luk, the British Museum's curator of Chinese paintings, prints and central Asian collections, said it shows the cosmopolitanism of the Sogdians: "We're really excited to be able to borrow it and show it for the first time in the UK." She said Silk Road traders are sometimes depicted as "peddlers or small-scale merchants". "But here is an image from their homeland that shows them having prospered from their trade."

The 8th-century ivory carvings are seven chess set pieces which have survived. Luk said: "They are among the earliest – if not the

earliest – chess pieces known in the world. They were excavated from a site in Samarkand and are thought to date from the 700s. The figures represent part of an army. There are foot soldiers, horse riders, people riding chariots, an elephant rider. Ivory was a luxury commodity at the time, which indicates that this set was a high-value object. "When chess was first developed in India around AD500, before spreading to the Middle East and Europe, it was a game for training military strategy among the elite. This is a great example of how, during the period we're covering in the exhibition, all these networks and connections have a legacy to the contemporary period, when chess as a game is spreading."

Due to its scope and geographical coverage, the exhibition will feature objects from every department across the British Museum, including Indian garnets discovered in Suffolk and Chinese ceramics found in Egypt, reflecting the astonishing reach of the Silk Road networks.

Exhibits will also include a gilded container that probably held chrism, a blended oil used in Christian rituals such as baptism, which was often scented with balsam, a valuable plant resin from the eastern Mediterranean or Arabia. In the AD720s, tight export controls inspired an English bishop called Willibald to smuggle it past Umayyad customs officials at Tyre in present-day Lebanon. He concealed the balsam in a hollowed-out gourd beneath a layer of mineral oil, which masked its distinctive fragrance.

For questions 21-24, choose the correct answer A, B, C, or D.

21 **According to the passage, the ancient wall is ...**

A) made centuries ago.
B) six meters tall.
C) created in Uzbekistan for the first time.
D) carved with chess sets and ivory figures.

22 **We can understand from the passage that the exhibition ...**

A) covers only British and Uzbek historical trade.
B) shows that an ancient trade network has survived from the past to the present.
C) also cover objects made in 1960s
D) will feature connections of people and states' in the ancient past.

23 **Luk, the British museum's curator ...**

A) doesn't want to go beyond showing camels, spices and silk.
B) is excited by the fact that he is borrowing some of the objects in the future.
C) aren't really sure that merchants from the ancient era aren't as big as today's world.
D) confirms that they will indeed want to go beyond one trade network.

24 **Exhibits also include ...**

A) ancient ritual oils and their ingredients.
B) a valuable plant known as resin which is blended with balsam.
C) tight export displays.
D) an object which was probably used for religious purposes.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 **The Exhibit spans across 1500 years.**

A) True
B) False
C) Not Given

26 **The six-meter-long wall is a part of "Halls of the Ambassadors".**

A) True
B) False
C) Not Given

27 **The Sogdians were skilled merchants.**

A) True
B) False
C) Not Given

28 **Ivory carvings are made like soldiers.**

A) True
B) False
C) Not Given

29 **The Sogdians traveled to Korea, Suffolk and Egypt.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

EMOJIS

Language always changes, of course. This is one of the few constants about it. But it's arguably changing at a faster rate now than at any previous moment in its history. And emojis - the set of picture characters that people use to punctuate their online correspondence - are at the forefront of this frenzy for change. As a form of global communication, emojis only began their growth in 2011. Four years later, it was estimated that they were being used by over 90 per cent of the online population. In excess of six billion were being sent every day. Their prevalence in the culture was such that Oxford Dictionaries recently chose one as their word of the year. 'Words of the Year' are those judged to be reflective of the 'ethos, mood, or preoccupations of that particular year'. They're very much of their time. And often, once that time has passed, they fade from people's consciousness almost as quickly as they arose.

There's a good chance, then, that the emoji chosen by Oxford Dictionaries - the 'face with tears of joy' - will also appear to be dated in a few years. But the reasons for this offer a fascinating insight into the way that society is evolving. The little yellow circle with dots for eyes acts as a surprisingly good lens through which to view the history of human communication, and to predict its future.

There are two main reasons why language changes. One is to do with the way that language mirrors the changes in how we relate to each other. As an expression of identity, language is adapted by different groups and different generations to reflect their own sense of self. It also needs to constantly assimilate fresh concepts as these evolve. Words are being created for these reasons all the time. But what's interesting about emojis is that they've contributed to this ever-expanding storehouse in a different way. At this point in our history, the gaps in our

vocabulary are being filled not simply by new words, but by an absolutely new system of expression.

The second major reason that language changes is down to technology specifically, the ways in which the technologies we use have an effect on the process of communication itself. Both hardware and new technologies result in us subtly changing the way we interact with each other and also altering the shape of the language we use. Emojis have evolved as a solution to the needs of mobile communication. In particular, they compensate for the way that computer-mediated messaging on smartphones can sometimes tend towards the emotionally empty. Whereas face-to-face, or even voice-to-voice, conversations can express emotional closeness through facial expression or tone of voice, this is easy to miss when messages are rendered in a few short words on a small screen. Emojis are a means of restoring this emotional framing to an interaction - punctuating your message with a smile.

But unlike almost any other type of language system, emojis have something akin to a built-in obsolescence. Just as smartphones and their operating systems have a frequent refresh rate, emojis also get routine enhancements. The emojis you have on your phone now will undergo subtle redesigns over the course of time, and extra characters will be added. Because of this, their usefulness is artificially limited. In the context of communication systems, this is something that's never previously been the case. Twenty years ago, people might have bought a new landline phone when they were tired of the design of their old phone or if they wanted to get one with whatever latest innovation was going around - an inbuilt answering machine, say. But they didn't have to upgrade the language they were using as well. Emojis, on the other hand, are a case study of how technology and the human capacity for communication are working together - of how the onward march of technology exists at the intersection of consumerism, innovation and design. Moreover, the fact that they're at the front line of a relentless wave of technologically driven change in communications practices encourages - if not necessitates - a great amount of creativity in the way they're used.

Finally, there's the way they've become implicated in almost all aspects of modern society, from politics and marketing to art and entertainment. Emojis are the subject of musicals and Hollywood films. They're the inspiration for fashion design, art and architecture. They're a staple in advertising and commerce. Understanding why they've become so popular, and how they work, can not only explain something about the nature of language; it can also help us to understand our relationship with technology, society and ourselves.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

The importance of the 'face with tears of joy'

It is probable that before long, an emoji such as the 'face with tears of joy' will seem **30** _____. This is of interest as it tells us about developments in society providing an effective way to focus on both the **31** _____ and the future of human communication.

Changes in language reflect changes in people's relationships. They reflect the ways in which the **32** _____ of groups and generations changes over time, and they allow new **33** _____ to be included. However, emojis are interesting as they are a system that expresses these ideas in a completely new way.

For questions 34-35, choose the correct answer A, B, C, or D.

34 What does the writer say about 'Words of the Year'?

A) They include increasing numbers of emojis.
B) They are soon forgotten by the public.
C) They are required to have social significance.
D) They are invented by the writers of dictionaries.

35 What would be the best subtitle for this text?

A) Will emojis take over from words one day?
B) How can emojis be made more meaningful?
C) Are emojis used too much in our society today?
D) What do emojis tell us about the world we live in?

MOCK TEST 14

READING

5 parts · 35 questions

60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE WORLD'S FIRST TRILLIONAIRE

A famous song and a quiz show ask, "Who wants to be a millionaire?" For decades, having a million dollars was the goal of the super-rich. Now, the goal is a billion dollars. The anti-poverty charity Oxfam has just issued a report that says in the next ten years, the world will have its first trillionaire. A **Q1** _____ is a huge number and an unbelievable amount of money. It is a one, followed by 12 zeros. A trillion is equal to one million million. The charity said the wealth gap between the **Q2** _____ and poor is growing. It said the gap has been "supercharged" since the coronavirus pandemic. It added: "We will have a trillionaire within a decade, whereas to fight poverty, we need more than 200 **Q3**_____."

Oxfam spoke about inequality at the World Economic Forum's annual meeting. As an example, it said the **Q4**_____'s five richest people have seen their wealth increase by 114 per cent since 2020. A charity spokesperson said: "The top five billionaires have doubled their **Q5**_____. On the other hand, almost five billion **Q6**_____ have become poorer." Tesla CEO Elon Musk is the richest man on the planet. He has a personal fortune of just under $250 billion. The AP news agency said: "If someone does reach that trillion-dollar milestone, he or she would have the same value as oil-rich Saudi Arabia." Oxfam said the world is now at the start of a "decade of division". It called for a "new era of public action" to reduce the wealth gap.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) This property is close to the study place.

B) There have the best transport options.

C) Retired person can live there.

D) This property may not be suitable for people who prefer silence.

E) The property has the biggest garage.

F) You may need to get a private car if you choose this house.

G) The cottage is near to the local town so you can walk there.

H) The property is suitable for single and hard-working individuals.

I) You can't stay there for more than twelve months.

J) Bedrooms is cut out for a family with at least two children.

7

Rowan Avenue

One room available in a family home. We welcome international students looking for accommodation. You will have your own room, but you should be prepared to live as part of the family. We have two young children and a dog so it can get a little noisy at times! All meals provided.

8

Brooklyn Road

This first-floor flat is in a great location. Excellent road and rail links with the station just a short five-minute walk away. This is a luxury property with new carpets and furniture in all rooms and so is not suitable for pet owners.

9

Ash Lane

A modern three-bedroom family home with a large garden. The property has its own garage. Situated in the heart of the countryside, there are excellent public transport links and a grocers and post office in the nearby village.

10

College Street

No bills to pay! Three spare bedrooms in this shared six-bedroom all-girl house. A regular bus and train service into the city centre and a short walk to the university. Share a very modern kitchen and living room. Hurry as rooms are going quickly!

11

Birch Hill

This ground floor, one-bedroom flat is perfect for the older person. The lounge opens onto a garden area shared by other residents. Limited parking but good transport links. Local shops nearby. Pets are welcome.

12

The Crescent

An opportunity to share a beautiful city-centre apartment situated in the centre of the business area. Looking for a professional person to share this two-bedroom property. Rent includes all bills. One-year minimum stay. No pets.

13

Baker Close

A second floor, one-bedroom flat perfect for a professional person. Situated close to the train station and local shops, great nightlife with clubs and restaurants just a short walk away. The property has parking at the back of the building. No pets allowed.

14

Meadow View Road

Cosy one-bedroom cottage in the countryside with garage attached. Ideal for someone who wants to get away from the busy city. A car is necessary as there are no transport links into the local town. The local area is very popular with walkers and those wanting to enjoy nature. Pets welcome.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A time when opportunities were limited
B) The reasons why Ferrando's product is needed
C) A no-risk solution
D) Two inventions and some physical details
E) The contrasting views of different generations
F) A disturbing experience
G) The problems with replacing a consumer item
H) Looking back at why water was bottled

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

PLASTIC IS NO LONGER FANTASTIC

I. In 2017, Carlos Ferrando, a Spanish engineer-turned-entrepreneur, saw a piece of art in a museum that profoundly affected him. 'What Lies Under', a photographic composition by Indonesian digital artist Ferdi Rizkiyanto, shows a child crouching by the edge of the ocean and 'lifting up' a wave, to reveal a cluster of assorted plastic waste, from polyethylene bags to water bottles. The artwork, designed to raise public awareness, left Ferrando angry – and fuelled with entrepreneurial ideas.

II. Ferrando runs a Spanish-based design company, Closca, that produces an ingenious foldable bicycle helmet. But he has now also designed a stylish glass water bottle with a stretchy silicone strap and magnetic closure mechanism that means it can be attached to almost anything, from a bike to a bag to a pushchair handle. The product comes with an app that tells people where they can fill their bottles with water for free.

III. The intention is to persuade people to stop buying water in plastic bottles, thus saving consumers money and reducing the plastic waste piling up in our oceans. 'Bottled water is now a $100 billion business, and 81 per cent of the bottles are not recycled. It's a complete waste – water is only 1.5 per cent of the price of the bottle!' Ferrando cries. Indeed, environmentalists estimate that by 2050 there will be more plastic in our oceans than fish and that's mainly down to such bottles. 'We are trying to create a sense that being environmentally sophisticated is a status symbol,' he adds. 'We want people to clip their bottles onto what they are wearing, to show that they are recycling – and to look cool.'

IV. Ferrando's story is fascinating because it seems like an indicator of something unexpected. Three decades ago, conspicuous consumption – the purchase of luxuries, such as handbags, shoes, cars, etc. on a lavish scale – heightened people's social status. Indeed, the closing decades of the 20th century were a time when it seemed that anything could be turned into a commodity. Hence the fact that water became a consumer item, sold in plastic bottles, instead of just emerging, for free, from a tap.

V. Today, though, conspicuous extravagance no longer seems desirable among consumers. Now, recycling is fashionable – as is cycling rather than driving. Plastic water bottles have become so common that they do not command status; instead, what many millennials – young people born in the late 20th century – prefer to post on social media are 'real' (refillable) bottles or even the once widespread Thermos bottles. Some teenagers currently think that these stainless-steel vacuum-insulated water bottles that are coming back onto the market are ultra 'cool'; never mind the fact that they feel oddly out-of-date to anyone over the age of 40 or that teenagers in the 1970s would have avoided ever being seen with one.

VI. It is uncertain whether Clesca will succeed in its goal. Although its foldable bike helmet is available in some outlets in New York, including the Museum of Modern Art, it can be very hard for any design entrepreneur to really take off in the global mass market, though not as hard as it might have been in the past. If an entrepreneur had wanted to fund a smart invention a few decades ago, he or she would have had to either raise a bank loan, borrow money from a family member or use a credit card. Things have moved on slightly since then.

PART 4

Questions 21–29

Read the following text for questions 21-29.

THE POWER OF NOTHING

Geoff Watts, New Scientist (May 26th, 2001)

Placebos are treatments that have no direct effect on the body, yet still, work because the patient has faith in their power to heal. Most often the term refers to a dummy pill, but it applies just as much to any device or procedure, from a sticking plaster to a crystal to an operation. The existence of the placebo effect implies that even quackery may confer real benefits, which is why any mention of placebo is a touchy subject for many practitioners of complementary and alternative medicine, who are likely to regard it as tantamount to a charge of charlatanism. In fact, the placebo effect is a powerful part of all medical care, orthodox or otherwise, though its role is often neglected or misunderstood.

One of the great strengths of CAM may be its practitioners' skill in deploying the placebo effect to accomplish real healing. "Complementary practitioners are miles better at producing non-specific effects and good therapeutic relationships," says Edzard Ernst, professor of CAM at Exeter University. The question is whether CAM could be integrated into conventional

medicines, as some would like, without losing much of this power.

At one level, it should come as no surprise that our state of mind can influence our physiology: anger opens the superficial blood vessels of the face; sadness pumps the tear glands. But exactly how placebos work their medical magic is still largely unknown. Most of the scant research done so far has focused on the control of pain because it's one of the commonest complaints and lends itself to experimental study. Here, attention has turned to the endorphins, morphine-like neurochemicals known to help control pain.

But exactly how placebos work their medical magic is still largely unknown. Most of the scant research to date has focused on the control of pain because it's one of the commonest complaints and lends itself to experimental study. Here, attention has turned to the endorphins, natural counterparts of morphine that are known to help control pain. "Any of the neurochemicals involved in transmitting pain impulses or modulating them might also be involved in generating the placebo response," says Don Price, an oral surgeon at the University of Florida who studies the placebo effect in dental pain.

"But endorphins are still out in front." That case has been strengthened by the recent work of Fabrizio Benedetti of the University of Turin, who showed that the placebo effect can be abolished by a drug, naloxone, which blocks the effects of endorphins. Benedetti induced pain in human volunteers by inflating a blood-pressure cuff on the forearm. He did this several times a day for several days, using morphine each time to control the pain. On the final day, without saying anything, he replaced the morphine with a saline solution. This still relieved the subjects' pain: a placebo effect. But when he added naloxone to the saline the pain relief disappeared. Here was direct proof that placebo analgesia is mediated, at least in part, by these natural opiates.

Still, no one knows how belief triggers endorphin release, or why most people can't achieve placebo pain relief simply by willing it. Though scientists don't know exactly how placebos work, they have accumulated a fair bit of knowledge about how to trigger the effect. A London rheumatologist found, for example, that red dummy capsules made more effective painkillers than blue, green or yellow ones. Research on American students revealed that blue pills make better sedatives than pink, a colour more suitable for stimulants. Even branding can make a difference: if Aspro or Tylenol is what you like to take for a headache, their chemically identical generic equivalents may be less effective.

It matters, too, how the treatment is delivered. Decades ago, when the major tranquilliser chlorpromazine was being introduced, a doctor in Kansas categorised his colleagues according to whether they were keen on it, openly skeptical of its benefits, or took a "let's try and see" attitude. His conclusion: the more enthusiastic the doctor, the better the drug performed. And this year Ernst surveyed published studies that compared doctors' bedside manners. The studies turned up one consistent finding: "Physicians who adopt a warm, friendly and reassuring manner," he reported, "are more effective than those whose consultations are formal and do not offer reassurance."

For questions 21-24, choose the correct answer A, B, C, or D.

21 Placebos work because ...
A) it has an effect on the body
B) it grows patient's faith
C) it enhances the power to heal
D) people believe on their effect

22 According to the passage, what have most studies on placebos focused on?
A) The role of endorphins in pain control
B) The effectiveness of placebos in treating various diseases
C) The psychological mechanisms behind the placebo effect
D) The potential integration of placebos into conventional medicine

23 The placebo effect, despite it's neglected status ...
A) doesn't work
B) is very scientific in nature
C) is a big part of medical care
D) has too much power

24 Endorphins ...
A) can help to overcome pain
B) makes blood vessels superficial
C) is a chemical hazard
D) is very distinct from morphine

For questions 25-29, decide if the following statements agree with the information given in the text.

25 The placebo effect only works for controlling pain.
A) True
B) False
C) Not Given

26 Endorphins are believed to play a role in the placebo effect.
A) True
B) False
C) Not Given

27 Naloxone, a drug that blocks endorphins, can eliminate the placebo effect for pain relief.
A) True
B) False
C) Not Given

28 Scientists fully understand how placebos trigger the release of endorphins.
A) True
B) False
C) Not Given

29 The color, branding, and delivery of placebo treatments can influence their effectiveness.
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

DIRTY RIVER BUT CLEAN WATER

Floods can occur in rivers when the flow rate exceeds the capacity of the river channel, particularly at bends or meanders in the waterway. Floods often cause damage to homes and businesses if they are in the natural flood plains of rivers. While

riverine flood damage can be eliminated by moving away from rivers and other bodies of water, people have traditionally lived and worked by rivers because the land is usually flat and fertile and because rivers provide easy travel and access to commerce and industry.

FIRE and flood are two of humanity's worst nightmares. People have, therefore, always sought to control them. Forest fires are snuffed out quickly. The flow of rivers is regulated by weirs and dams. At least, that is how it used to be. But foresters have learned that forests need fires to clear out the brush and even to get seeds to germinate. And a similar revelation is now dawning on hydrologists. Rivers – and the ecosystems they support – need floods. That is why a man-made torrent has been surging down the Grand Canyon. By Thursday, March 6th it was running at full throttle, which was expected to be sustained for 60 hours.

Floods once raged through the canyon every year. Spring Snow from as far away as Wyoming would melt and swell the Colorado river to a flow that averaged around 1,500 cubic metres (50,000 cubic feet) a second. Every eight years or so, that figure rose to almost 3,000 cubic metres. These floods infused the river with sediment, carved its beaches and built its sandbars.

However, in the four decades since the building of the Glen Canyon dam, just upstream of the Grand Canyon, the only sediment that it has collected has come from tiny, undammed tributaries. Even that has not been much use as those tributaries are not powerful enough to distribute the sediment in an ecologically valuable way.

This lack of flooding has harmed local wildlife. The humpback chub, for example, thrived in the rust-red waters of Colorado. Recently, though, its population has crashed. At first sight, it looked as if the reason was that the chub were being eaten by trout introduced for sport fishing in the mid-20th century. But trout and chub co-existed until the Glen Canyon dam was built, so something else is going on. Steve Gloss, of the United States Geological Survey (USGS), reckons that the chub's decline is the result of their losing their most valuable natural defense, Colorado's rusty sediment. The chub were well adapted to the poor visibility created by the chick, red water which gave the river its name and depended on it to hide from predators. Without the cloudy water, the chub became vulnerable.

And the chub are not alone. In the years since the Glen Canyon dam was built, several species have vanished altogether. These include the Colorado pike-minnow, the razorback sucker and the roundtail chub. Meanwhile, aliens including fathead minnows, channel catfish and common carp, which would have been hard, put to survive in the savage waters of the undammed canyon, have moved in.

So flooding is the obvious answer. Unfortunately, it is easier said than done. Floods were sent down the Grand Canyon in 1996 and 2004 and the results were mixed. In 1996 the flood was allowed to go on too long. To start with, all seemed well. The floodwaters built up sandbanks and infused the river with sediment. Eventually, however, the continued flow washed most of the sediment out of the canyon. This problem was avoided in 2004, but unfortunately, on that occasion, the volume of sand available behind the dam was too low to rebuild the sandbanks. This time, the USGS is convinced that things will be better. The amount of sediment available is three times greater than it was in 2004. So if a flood is going to do some good, this is the time to unleash one.

Even so, it may turn out to be an empty gesture. At less than 1,200 cubic metres a second, this flood is smaller than even an average spring flood, let alone one of the mightier deluges of the past. Those glorious inundations moved massive quantities of sediment through the Grand Canyon, wiping the slate dirty, and making a muddy mess of silt and muck that would make modern river rafters cringe.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

The eco-impact of the Canyon Dam

Floods are people's nightmare. In the past, the canyon was raged by flood every year. The snow from far Wyoming would melt in the season of **30** _____ and caused a flood flow peak in Colorado river. In the four decades after people built the Glen Canyon Dam, it only could gather **31** _____ together from tiny, undammed tributaries. humpback chub population reduced, why?

The non-stopped flow led to the washing away of the sediment out of the canyon, which poses a great threat to the chubs because it has poor **32** _____ away from predators. In addition, the volume of **33** _____ available behind the dam was too low to rebuild the bars and flooding became more serious.

For questions 34-35, choose the correct answer A, B, C, or D.

34 Which of the following statements agree with the information given in the passage?

A) The flood peaks at almost 1500 cubic meters every eight years.

B) Contribution of sediments delivered by tributaries has little impact.

C) The decreasing number of chubs is always caused by introducing of trout since the mid 20th century.

D) It seemed that the artificial flood in 1996 had achieved success partly at the very beginning.

35 According to the passage, which of these species aren't native to the Colorado river?

A) the humpback chub

B) the common carp

C) the roundtail chub

D) the razorback sucker

MOCK TEST 15

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

MESSAGE IN THE BOTTLE

More than 110 years ago a young woman named Sofia Nielsen was walking on the seaside of the North Sea. During the trip, she got a crazy idea. She wrote a message with the **Q1**_____, put it in a green bottle and threw the bottle into the **Q2** _____ Sea. What she didn't know is that **Q3** _____ would survive so long. Last week, a Danish fisherman found Nielsen's bottle when he was on his everyday fishing trip. He carried it to a museum.

The historians in the **Q4**_____ discovered that it's the historic message in the bottle in the world! They also **Q5** _____ Nielsen's grandson, Malthe who is now 72 years old. He lives in Copenhagen and never met his grandmother who died in 1940. What did the bottle contain? Well, there was a letter inside. Nielsen asked the finder to return it to his home address in Copenhagen. They couldn't read the rest of the **Q6** _____ because some water got inside and damaged the ink. But it didn't stop the specialists. They're trying to figure out the entire letter and hope it'll be possible to read it soon.

PART 2

Questions 7–14

Read the texts 1-8 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You have just bought a piano and need delivery to your second floor apartment.

B) You are immigrating to England, with all your household goods plus a car.

C) You have bought a house on an island and you want to move your things there from the mainland.

D) You need fast service to deliver to your house a sofa you just bought.

E) You want an inexpensive service to help you move and store apartment furniture.

F) You are moving house and need a truck for a few hours which you will load and drive.

G) You need to remove some old unnecessary things.

H) You need someone experienced to advise you on how to move.

I) You want a moving company owned by the Chinese.

J) You got a job in another city. You want to rent a truck to move your household goods by yourself, one way only.

7

Affordable Moving

The best move you can make. Local. Overseas shipping. Long distance. Storage. Packing. Family owned and operated. Call for your free estimate. Professional moving at an affordable rate. 24 hours, 7 days a week. Call 277 4086.

8

U Drive One Way Truck Rental

GUARANTEED NEW MODEL VEHICLES. FREE ROADSIDE ASSISTANCE. GUARANTEED RESERVATIONS. All trucks include: Diesel engine, Air conditioning, Automatic transmission, Walk up ramps, Am/Fm cassette. Move yourself and save. Low rate by the day, week or longer. Furniture pads and dollies. Mini storage available.

9

Professional Relocation Services

WORLD WIDE MOVING. FROM A SINGLE ITEM TO A FULL HOUSE. Free, no obligation consultation. Free written estimate to or from anywhere in the world. Special service for cars. Shared rates to and from Australia, Hong Kong, Japan, North America, UK. Packing crates, storage, customs bonded carrier. TOLL FREE 18999601847.

10

Al's Junk and Moving Express

Pick up furniture or small household items. Need a small truck to move? Cleaning up a yard? Get rid of that junk! Serving the local area 7341-8345.

11

GET MOVING

Car and Truck Rental. Move yourself and save. 7 days a week, commercial rates. 2 and 4-hour specialists. Low rates by the day, week or longer. Furniture pads and dollies. Heavy duty specs, for commercial use. Cube vans, flat decks, moving vans, pick ups and panels. Mini-storage available. For reservation call 641-8193.

12

Blue Star

TAXI TRUCKS, REMOVALS, STORAGE. FOR ALL YOUR MOVING NEEDS. On time, On budget, On location. Full range of taxi truck services – 2 tons to 12 van or tray. Guaranteed pick up within 2-3 hours, all suburbs 24 hours a day, 7 days a week. We take responsibility for, and insure, your goods. Modern fully equipped vehicles complete with safety handling equipment. Vehicles have furniture pads, tailgate loaders. Billiard table? Piano? Freezer? Large pieces of furniture? Awkward locations? No problem – our drivers and assistants are specialists. Booking is easy and fast Tel 9807012.

13

Vanline Moving

Do you need to move urgently or the same day due to work or having a short notice to move? Last-minute moving service is inclusive of services: packing, loading, unloading. Experts will handle your last distance move from start to end, which means packing to unloading. Customized moving plans by the experts will make your move smooth. We have moving companies specialized in long-distance, local, and commercial last-minute moves. Call 98211663 and book our service.

14

AIR MOVING

Helicopter and small planes. Move your items by air. Fast and safe moving. Affordable prices. Move to the locations out of reach for cars. Packing service not available. Reserve at least 1 week in advance, call 5589446.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) How people started to collect their images
B) Where they live
C) How they confuse the scientists
D) How they get their food
E) What endangers them
F) How people used to treat them
G) How they breed
H) How they scare the people

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

FLAMINGOS

I. Flamingos are very social and often live in large groups, called colonies throughout the world. They are found in both the Eastern and Western hemispheres. The American Flamingo is the only one that lives in the wild North America, and on many Caribbean islands such as the Bahamas, Cuba and Hispaniola. It also lives in northern South America, the Galapagos Islands, and parts of Mexico.

II. Flamingos fish while walking in shallow water and mud. When a flamingo notices its potential dinner (for example, shrimp, snails, and plantlike water organisms), it plunges its head into the water, twists its head ups down, and scoops the fish up using its upper beak like a shovel. Flamingos get their pink coloring from the carotenoid pigment in their food, which the same pigment that makes carrots orange.

III. Flamingos build nests that look like mounds of mud along waterways. The parents take turns sitting on the egg to keep it warm and after about 30 days the egg hatches. Young flamingos are born white, with soft, downy feathers and a straight bill. Both adult birds look after the newborn flamingo. The young leave the nest after about five days to join other young flamingos in small groups, returning to their parents for food.

IV. Scientists aren't 100% sure why flamingos stand on one leg, but they have some theories. One theory says that it is to keep one leg warm. Another idea is that flamingos are drying out one leg at a time. A third theory states that it helps them deceive their catch, because one leg looks more like a plant than do two. Whatever the reason, it is truly amazing that these top heavy birds can balance on one leg for hours at a time.

V. Ancient Egyptians believed that flamingos were the living representation of the god Ra. In the Americas, the Moche people of ancient Peru worshipped nature and paid a great deal of attention to these birds and often depicted flamingos in their art. However, Andean miners killed flamingos for their fat, which is believed to be a remedy for tuberculosis, and in Ancient Rome their tongues were considered a delicacy.

VI. Many people have plastic flamingos in their yards as ornaments. This is a fun and inexpensive way to add some elegance to one's landscaping. In many parts of the world flamingos are popular collectibles, appearing in the form of magnets, water globes, and jewelry. They are also said to be an image that people find to be calming and exciting at the same time. For these purposes people buy millions of plastic flamingos annually all around the world.

PART 4

Questions 21–29

Read the following text for questions 21-29.

BE WEB WISE

Protect your computer, by all means, but don't forget to protect yourself, advises web safety expert, Amanda Knox.

We're always being urged to stay safe online. But in an era where the internet is part of our everyday lives for work, fun, study, shopping, even managing finances it's not always easy to spot the dangers. Web safety expert, Amanda Knox, explores some of the issues lurking in cyberspace. Her first piece of advice is to install software and a firewall to protect your computer from viruses, hackers and criminals who want to steal your data or financial information. "Think of these as your first line of defense," says Amanda.

So much for protecting yourself against intruders, but what about other problems? Say you've accidentally deleted an important file or you've been at the mercy of a natural disaster. Katy Marsh runs an online photography business from home and when a fire destroyed part of her house it could easily have

spelled ruin for her business too. "Luckily I keep a regular back-up of my data so it wasn't a catastrophe." Amanda advises that while back-ups are good to have we must ensure we protect our computers to start with. Whilst most of us are aware of the need to protect our computers, it seems we're more lax when it comes to looking out for ourselves, at least according to a recent web awareness survey. Web safety specialists say better personal awareness is needed and this is due in part to the rise of 'Social Networking' sites like 'Facebook' or 'Twitter', which allow us to connect with people around the world with similar interests and professional backgrounds.

Chris Simpson, a computer programmer, learnt the hard way. "I joined a free online networking group in the hope of making some professional contacts to help me find a new job. After a month; one of my online contacts invited me to take out a subscription to a club that promised access to a network of job recruiters. It turned out to be a waste of money! I ended up a laughing stock with my mates – they couldn't believe that someone in my job could get taken in so easily." No wonder then that Amanda warns, "It's easy to get complacent and let our guard down when we meet someone with the same interests online."

This brings us to other potential pitfalls. Are the people you meet online who they really claim to be? Can you be sure the person you're chatting with is in fact a 22-year-old Maths undergraduate from London and not someone merely masquerading as a student to win your trust? Khaled, a postgrad from Manchester University, quickly realized that it was unwise of him to post his phone number and email address in the public forum of an online academic discussion group. He was soon bombarded with unwanted emails and nuisance phone calls. Yet, it's astonishing how many highly educated people do this without considering the consequences that anyone in the world could use the information to make (unwanted) contact.

When networking and joining online communities it's better to be cautious about the amount of personal information you share. For example, it isn't always necessary to use your real name as a username when registering for a service. You could instead use a pseudonym, or a name that doesn't give away your real identity to other users. And is it really important to tell the world details about your school, college or any local clubs you're a member of? Sometimes it pays to be a little vague and simply say something like "I'm studying at college in Madrid at the moment and I'm a member of a local tennis club".

For questions 21-24, choose the correct answer A, B, C, or D.

21 **In the second paragraph the phrase "first line of defence" suggests something**

A) is the only option
B) offers protection
C) is an instruction
D) shows weakness

22 **The effect of the fire was**

A) worse for Katy's business than her home.
B) to ruin Katy's business.
C) not as serious for Katy's business as it could have been.
D) to make Katy start to back up her data.

23 **According to the web awareness survey, our attitude to our personal safety is rather**

A) relaxed
B) concerned
C) positive
D) uncertain

24 **Regarding Khaled's experience the writer is surprised that**

A) people telephone complete strangers.
B) people don't think of the results of their actions online.
C) university students take part in online discussions.
D) people sent emails to Khaled without asking permission.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 **The spread of the internet may affect adversely the safety of people in many different ways.**

A) True
B) False
C) Not Given

26 **The main aim of hackers is to sell your financial information to third parties.**

A) True
B) False
C) Not Given

27 **For Katy, it was impossible to restore any materials related to her business after the fire.**

A) True
B) False
C) Not Given

28 **Simpson was lucky to find a new job with the help of his online contact.**

A) True
B) False
C) Not Given

29 **The author advises avoiding sharing accurate personal information on the internet to be safe.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

HOW TO SPOT A LIAR

However much we may abhor it, deception comes naturally to all living things. Birds do it by feigning injury to lead hungry predators away from nesting young. Spider crabs do it by disguise: adorning themselves with strips of kelp and other debris, they pretend to be something they are not – and so escape their enemies. Nature amply rewards successful deceivers by allowing them to survive long enough to mate and reproduce. So it may come as no surprise to learn that human beings – who, according to psychologist Gerald Johnson of the University of South California, or lied to about 200 times a day, roughly one untruth every 5 minutes – often deceive for exactly the same reasons: to save their own skins or to get something they can't get by other means.

But knowing how to catch deceit can be just as important a survival skill as knowing how to tell a lie and get away with it. A person able to spot falsehood quickly is unlikely to be swindled by an unscrupulous business associate or hoodwinked by a devious spouse. Luckily, nature provides more than enough clues to trap dissemblers in their own tangled webs – if you know where to look. By closely observing facial expressions, body language and tone of voice, practically anyone can recognize the tell-tale signs of lying. Researchers are even programming computers – like those used on Lie Detector – to get at the truth by analyzing the same physical cues available to the naked eye and ear. "With the proper training, many people can learn to reliably detect lies," says Paul Ekman, professor of psychology at the University of California, San Francisco, who has spent the past 15 years studying the secret art of deception.

In order to know what kind of lies work best, successful liars need to accurately assess other people's emotional states. Ekman's research shows that this same emotional intelligence is essential for good lie detectors, too. The emotional state to watch out for is stress, the conflict most liars feel between the truth and what they actually say and do.

Even high-tech lie detectors don't detect lies as such, they merely detect the physical cues of emotions, which may or may not correspond to what the person being tested is saying. Polygraphs, for instance, measure respiration, heart rate and skin conductivity, which tend to increase when people are nervous – as they usually are when lying. Nervous people typically perspire, and the salts contained in perspiration conducts electricity. That's why sudden leap in skin conductivity indicates nervousness – about getting caught, perhaps – which makes, in turn, suggest that someone is being economical with the truth. On the other hand, it might also mean that the lights in the television studio are too hot – which is one reason polygraph tests are inadmissible in court.

"Good lie detectors don't rely on a single thing" says Ekman, "but interpret clusters of verbal and non-verbal clues that suggest someone might be lying." The clues are written all over the face. Because the musculature of the face is directly connected to the areas of the brain that processes emotion, the countenance can be a window to the soul. Neurological studies even suggest that genuine emotions travel different pathways through the brain than insincere ones. If a patient paralyzed by stroke on one side of the face, for example, is asked to smile deliberately, only the mobile side of the mouth is raised. But tell that same person a funny joke, and the patient breaks into a full and spontaneous smile. Very few people – most notably, actors and politicians – are able to consciously control all of their facial expressions. Lies can often be caught when the liars' true feelings briefly leak through the mask of deception. We don't think before we feel, Ekman says. "Expressions tend to show up on the face before we're even conscious of experiencing an emotion."

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

Johnson mentions that the most common reason for deceiving people is to protect their **30** _____.

Fortunately, there are more than enough **31** _____ which are provided by the nature to detect a lying person.

One of the emotional states which should be observed carefully is **32** _____ puts liars in awkward situation.

The main reason for the rejection of polygraph tests in the court is **33** _____.

For questions 34-35, choose the correct answer A, B, C, or D.

34 Lie detectors can't be used as evidence in a court of law because

A) Lights often cause lie detectors to malfunction.
B) They are based on too many verbal and non-verbal clues.
C) Polygraph tests are often inaccurate.
D) There may be many causes of certain body behavior.

35 Why does the author mention the paralyzed patients?

A) To demonstrate how a paralyzed patient smiles.
B) To show the relation between true emotions and body behavior.
C) To examine how they were paralyzed.
D) To show the importance of happiness of recovery.

PART 1

Questions 1–7

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

AUSTRALIA

Australia was the last great landmass to be discovered by the Europeans. The continent they eventually **Q1**_____ had already been inhabited for tens of thousands of years.

Australia is an island **Q2**_____ whose landscape — much of bleak and inhospitable is the result of gradual changes wrought over millions of **Q3**_____.

Although there is still seismic activity in the eastern highland area, **Q4**_____ is one of the most stable land masses, and for about 100 million years has been free of the forces that have given rise to huge mountain ranges elsewhere.

From the east coast a narrow, fertile strip merges into the greatly eroded Great Dividing Range, that is almost continent long.

The mountains are merely reminders of the mighty range, that once stood here. Only in the section straddling the New South Wales border with Victoria and in Tasmania, are they high enough to have winter snow.

West of the **Q5**_____ of the country becomes increasingly flat and dry. The endless flatness is broken only by salt lakes, occasional mysterious protuberances and some **Q6** _____ whose beauty reminds of the MacDonald Ranges. In places the scant vegetation is sufficient to allow some grazing. However, much of the Australian outback is a barren land of harsh stone deserts and dry lakes.

The extreme north of Australia, the Top End, is a tropical area within the monsoon belt. Although its annual rainfall looks adequate on paper, it comes in more or less one short, sharp burst. This has prevented the Top End from becoming seriously productive **Q7**_____.

PART 2

Questions 8–12

The people below in 8-12 all want to do a course. Look at the descriptions of eight courses (A-H). Decide which course would be most suitable for each person.

8
Martina
Martina is an accomplished photographer looking for an enjoyable course where she can improve her skills. She loves taking pictures outdoors and is only free at weekends.

9
Manuel
Manuel has painted for ten years and wants to learn about the work of famous painters from the past. He is looking for a day-time course that will help him improve his painting skills.

10
Maria
Maria is 32, and she would like to do computer studies in Manchester. She wants to do a part-time course that includes theory and practical skills. In her spare time, she paints and draws.

11
Claudia
Claudia would like a course where she can learn the basic concepts of drawing. She works in the morning but is free at weekends. She is most interested in drawing portraits but does not need a qualification.

12
Sally
Sally is 25. She wants to take up an activity that will give her a lot of contact with other people. She is very talented and likes performing.

A) ITB and computer courses. Full-time courses. This full-time course is designed to help you improve the digital skills you use in everyday life. These skills will allow you to use computers confidently and effectively in both your working and personal life. This course is suitable for those who want to study in the evening.

B) NTB. A Photographic Adventure. This beginner digital photography course is meant to help you master your digital camera. You will finally be able to enter the magical world of photography! Professional photographers will show you how to see the world as a photographer, whether you're just starting or you've been taking photos for years.

C) 3D Studio. Part-time courses. 3D Studio has a fun 34-week photo challenge. All courses are led by a professional photographer who has specific skills to teach you. By learning with 3D Studio, we will take you to the best places and venues in the countryside. The course takes place on Saturdays, 3.30-6.00 p.m.

D) Adam Elliot Studio. Renaissance Painting Workshop. During this workshop, students will be taught the classical methods of oil painting used by Italian and Flemish masters of the late 16th and early 17th centuries. This workshop is suitable for students of all levels of experience. Classes are on Monday and Wednesday from 9-11 a.m.

E) Santa Reparata. Supplementary Art Course. The main aim of this short course is to provide an introduction to one of the most famous periods of Italian Art. The one-week painting course is suitable for absolute beginners. Classes are from 6.30-9.30 p.m. Monday to Friday.

F) The Art Academy. Open Life Class. This is an informative, intensive, and fun weekend course, which teaches essential drawing skills. Through various drawing approaches including life drawing, portraiture, and still life, you will learn to understand texture, line, measurement, and composition.

G) The Open University. Computing and IT. Our Adult courses give you the chance to boost your confidence and develop your work skills. This course will prepare you for progression to further study in computing and software development. Full-time and part-time courses are available.

H) Jennifer Collins Theatre School. Musical theatre courses. This course aims to provide participants with the opportunity to train to the highest standards for a professional career in Dance and Musical Theatre. We offer a chance to meet new friends in a family-like environment.

PART 3

Questions 13–18

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

I) Cons of the commuting
II) Thing that students have to go through
III) Commutes have become common in Ireland nowadays
IV) Danger of the overflow
V) Cause of the problems
VI) Pricing data
VII) Regression
VIII) Eyeless choice

13. Paragraph A **14. Paragraph B** **15. Paragraph C**
16. Paragraph D **17. Paragraph E** **18. Paragraph F**

THE STUDENTS' PROBLEM

A. The college and university accommodation crisis in Ireland has become 'so chronic' that students are being forced to sleep rough, share a bed with strangers – or give up on studying altogether.

B. The deputy president of the Union of Students in Ireland, Kevin Donoghue, said the problem has become particularly acute in Dublin. He told the Irish Mirror: "Students are so desperate, they're not just paying through the nose to share rooms – they're paying to share a bed with complete strangers. It reached crisis point last year and it's only getting worse. "We've heard of students sleeping rough; on sofas, floors and in their cars and I have to stress there's no student in the country that hasn't been touched by this crisis. "Commutes – which would once have been considered ridiculous – are now normal, whether that's by bus, train or car and those who drive often end up sleeping in their car if they've an early start the next morning."

C. Worry is increasing over the problems facing Ireland's 200,000 students as the number increases over the next 15 years. With 165,000 full-time students in Ireland – and that figure expected to increase to around 200,000 within the next 15 years – fears remain that there aren't enough properties to accommodate current numbers.

D. Claims have emerged from the country that some students have been forced to sleep in cars, or out on the streets, because of the enormous increases to rent in the capital. Those who have been lucky enough to find a place to live have had to do so 'blind' by paying for accommodation, months in advance, they haven't even seen just so they will have a roof over their head over the coming year.

E. According to the Irish Independent, it's the 'Google effect' which is to blame. As Google and other blue-chip companies open offices in and around Dublin's docklands area, which are 'on the doorstep of the city', international professionals have been flocking to the area which will boast 2,600 more apartments, on 50 acres of undeveloped land, over the next three to 10 years.

F. Rent in the area soared by 15 per cent last year and a two-bedroom apartment overlooking the Grand Canal costs €2,100 (£1,500) per month to rent. Another two-bedroom apartment at Hanover Dock costs €2,350 (almost £1,700) with a three-bedroom penthouse – measuring some 136 square metres – sits at €4,500 (£3,200) per month in rent.

PART 4

Questions 19–28

Read the following text for questions 19-28.

TOP COMPANIES WITH PART-TIME OPENINGS

1. The Vitamin Shoppe: 1,946 part-time openings. The Vitamin Shoppe is a New Jersey-based retailer of nutritional supplements. They also operate stores in Canada under the name "VitaPath". The company provides approximately 8,000 different SKU's of supplements through its retail stores and over 20,000 different SKU's of supplements through its online retail websites.

Employee Review: "Good growth opportunities and stores opening all over the US all year 'round. Company based out of NJ, so more progressive policies on employment and benefits. Good vacation, health, and dental benefits. Payment is above average. Good policies on customer service interaction as well. Focus on Customer service vs. pushing products."

2. Chipotle: 1,553 part-time openings. Chipotle is known for its use of organic meats throughout its more than 1,500 restaurants, which are located in 45 states. Since having been founded in 1993, the chain has since exploded and now counts some 37,000 employees. It is a pioneer in the "fast casual" dining movement.

Employee Review: "The people I work with are awesome and the food is good. It pays my bills and makes me laugh. The schedule is super flexible but it's a lot of work. If you're looking for something easy and laid back, keep looking."

3. Advantage Sales & Marketing: 1,742 part-time openings. Advantage Sales & Marketing provides outsourced sales, merchandising, and marketing services to consumer goods and food product manufacturers and suppliers. Owning more than 65 offices in the US and Canada, ASM does merchandising for 1,200 clients -- including Johnson & Johnson, Mars, Unilever, Energizer.

Employee Review: "Long lasting business, able to adapt to changes in market. Well-thought out schedule, and flexible time off for both vacation and illness."

4. Universal Protection Service: 1,219 part-time openings. Universal Protection Service is one of the largest providers of security services in the U.S. They offer an expansive range of security solutions for airports, healthcare facilities, office buildings, and more.

Employee Review: "Good pay depending on where you work. Room for advancement based on availability. Better company than any other I have worked for in security."

5. PSA Healthcare: 1,295 part-time openings. PSA Healthcare, also known as Pediatric Services of America, provides comprehensive home health services through a branch of office across the United States. The company is headquartered in Atlanta, Ga.

Employee Review: "I love working one-on-one with the pediatric patient and their families. You have the time needed to give great compassionate care! Office staff and supervisors are very good with both employees and clients. There is a lot of flexibility with staffing. I never received grief for requesting a day off."

For questions 19-25, choose the correct answer A, B, C, or D.

19 Which offer has the most part-time openings?
A) Chipotle
B) PSA Healthcare
C) The Vitamin Shoppe
D) Advantage Sales & Marketing

20 Which of these companies operate both in USA and Canada?
A) The Vitamin Shoppe and Advantage Sales & Marketing
B) PSA Healthcare and Advantage Sales & Marketing
C) Chipotle and PSA Healthcare
D) PSA Healthcare and The Vitamin Shoppe

21 Review of which company says that it is the best security company he/she worked for?
A) Chipotle
B) The Vitamin Shoppe
C) Universal Protection Service
D) PSA Healthcare

22 Which company was founded in 1993?
A) The Vitamin Shoppe
B) Universal Protection Service
C) PSA Healthcare
D) Chipotle

23 Main office of which company is situated in Atlanta?
A) The Vitamin Shoppe
B) PSA Healthcare
C) Chipotle
D) Advantage Sales & Marketing

24 VitaPath is the other name of which company?
A) PSA Healthcare
B) Universal Protection Service
C) The Vitamin Shoppe
D) Advantage Sales & Marketing

25 Which review doesn't mention a comfortable timetable?
A) Chipotle
B) Advantage Sales & Marketing
C) The Vitamin Shoppe
D) PSA Healthcare

Do the following statements agree with the information given?

26 The Vitamin Shoppe has an above average salary, according to the review.
A) True
B) False
C) Not Given

27 Reviewer of the company Chipotle says that working there is both fun and earns enough money.
A) True
B) False
C) Not Given

28 Advantage Sales & Marketing owns 65 offices all over the world.
A) True
B) False
C) Not Given

PART 5

Questions 29–35

Read the following text for questions 29-35.

WORKPLACE DISMISSALS

Before the dismissal

If an employer wants to dismiss an employee, there is a process to be followed. Instances of minor misconduct and poor performance must first be addressed through some preliminary steps.

Firstly, you should be given an improvement note. This will explain the problem, outline any necessary changes and offer some assistance in correcting the situation. Then, if your employer does not think your performance has improved, you may be given a written warning. The last step is called a final written warning which will inform you that you will be dismissed unless there are improvements in performance. If there is no improvement, your employer can begin the dismissal procedure.

The dismissal procedure begins with a letter from the employer setting out the charges made against the employee. The employee will be invited to a meeting to discuss these accusations. If the employee denies the charges, he is given the opportunity to appear at a formal appeal hearing in front of a different manager. After this, a decision is made as to whether the employee will be let go or not.

Dismissals

Of the various types of dismissal, a fair dismissal is the best kind if an employer wants an employee out of the workplace. A fair dismissal is legally and contractually strong and it means all the necessary procedures have been correctly followed. In cases where an employee's misconduct has been very serious, however, an employer may not have to follow all of these procedures. If the employer can prove that the employee's behaviour was illegal, dangerous or severely wrong, the

employee can be dismissed immediately: a procedure known as summary dismissal.

Sometimes a dismissal is not considered to have taken place fairly. One of these types is wrongful dismissal and involves a breach of contract by the employer. This could involve dismissing an employee without notice or without following proper disciplinary and dismissal procedures. Another type, unfair dismissal, is when an employee is sacked without good cause.

There is another kind of dismissal, known as constructive dismissal, which is slightly peculiar because the employee is not actually openly dismissed by the employer. In this case the employee is forced into resigning by an employer who tries to make significant changes to the original contract. This could mean an employee might have to work night shifts after originally signing on for day work, or he could be made to work in dangerous conditions.

Complete the sentences below. Choose NO MORE THAN THREE WORDS from the text for each answer.

If an employee receives a **29** _____, this means he will lose his job if his work does not get better.

If an employee does not accept the reasons for his dismissal, a **30** _____ can be arranged.

Look at the following descriptions (Questions 31-35) and the list of terms in the box below. Match each description with the correct term A-E.

31 **An employee is asked to leave work straight away because he has done something really bad.**

A) Fair dismissal
B) Summary dismissal
C) Unfair dismissal
D) Wrongful dismissal
E) Constructive dismissal

32 **An employee is pressured to leave his job unless he accepts conditions that are very different from those agreed to in the beginning.**

A) Fair dismissal
B) Summary dismissal
C) Unfair dismissal
D) Wrongful dismissal
E) Constructive dismissal

33 **An employer gets rid of an employee without keeping to conditions in the contract.**

A) Fair dismissal
B) Summary dismissal
C) Unfair dismissal
D) Wrongful dismissal
E) Constructive dismissal

34 **The reason for an employee's dismissal is not considered good enough.**

A) Fair dismissal
B) Summary dismissal
C) Unfair dismissal
D) Wrongful dismissal
E) Constructive dismissal

35 **The reasons for an employee's dismissal are acceptable by law and the terms of the employment contract.**

A) Fair dismissal
B) Summary dismissal
C) Unfair dismissal
D) Wrongful dismissal
E) Constructive dismissal

FREE THINGS TO DO IN NEW YORK CITY

Touring New York City and visiting its attractions can be a costly affair, especially if you visit the Empire State Building, Statue of Liberty, or attend special events and dine in fancy restaurants. However, this does not indicate that you have to empty your pockets to experience the New York life and its **Q1** _____ The city offers a fair share of landmark attractions and activities that are absolutely free and may actually present a more local insight of the city than paid attractions. Mentioned below is a list of free things to do in the city that never sleeps.

Belvedere Castle

The heart of Central Park holds one of New York's most treasured attractions – the Belvedere Castle. Built in 1869, this Victorian castle has many exhibit rooms and an observation deck. Admission to the castle is free of charge. You can visit the site's Henry Luce Nature Observatory, which **Q2**_____ diverse displays of plants and animals. If you step up the **Q3** _____ tower, you can get spectacular views of Central Park.

Brooklyn Bridge

Many tourists click postcard-worth pictures of the Brooklyn Bridge. But, you can also take a walk on the bridge as car whizz past you. Brooklyn Bridge has a pedestrian walkway right in the middle of its six lanes. The **Q4**_____ keeps you safe from the traffic and it is absolutely free to cross the Brooklyn Bridge on foot. It will take you approximately 30 minutes to cross the bridge and you can get to see stunning **Q5** _____ of downtown Manhattan.

Grand Central Terminal

Built in 1913, the Grand Central Terminal is a major hub of the city's public transportation. It serves more than 575,000 commuters every day. You can stroll in the station for **Q6** _____ and check out the shopping spots and places to eat. The grand building also exhibits beautiful artwork and sculpture. You may also chance upon special exhibitions or seasonal vendors.

Staten Island Ferry

The Staten Island Ferry ride is one of the most fun and free things to do in New York City. It is a 25-minute boat ride that sails between Manhattan and St. George on Staten Island. You can also get a close view of the Statue of Liberty. Once you disembark on Staten Island, then you can spend hours on the island to discover the interesting sights and attractions. When you have your fill, you can board the **Q7**_____ to return to Manhattan.

PART 2

Questions 8–14

Read the descriptions of eight courses. Decide which course would be the most suitable for you. For Questions 8-14, select the best course.

8

Person 8

You are an accomplished photographer looking for an enjoyable course where you can improve your skills. You love taking pictures outdoors and are only free at weekends.

9

Person 9

You have painted for 10 years and want to learn about the work of famous painters from the past. You are looking for a day-time course that will help you improve your painting skills.

10

Person 10

You are 32 and you would like to do computer studies in Manchester. You want to do a part-time course which includes theory and practical skills. In your spare time you paint and draw.

11

Person 11

You would like a course where you can learn the basic concepts of drawing. You work in the morning but are free at weekends. You are most interested in drawing portraits but do not need a qualification.

12

Person 12

You are 25. You want to take up an activity that will give you a lot of contact with other people. You are very talented and like performing.

13

Person 13

You are not very fit. You would like to get fitter, but you find exercise boring. You are looking for an evening class that is different every week. You would also like to see how you are improving over time.

14

Person 14

You take sport seriously. You play hockey and tennis and want to improve your skills and take part in competitions. You are not free from Monday to Friday.

A) VR-RuN! Have fun and get fit at your local sports centre! Classes every Tuesday and Thursday from 6-8 p.m. No two classes are the same! We organize regular competitions and also offer individual fitness checks every month, plus the chance to gain progress certificates.

B) Jennifer Collins Theatre School. The aim of this course is to provide participants with the opportunity to train to the highest standards for a professional career in Dance and Musical Theatre. We offer a chance to meet new friends in a very happy environment.

C) The Open University. Our Adult courses give you the chance to boost your confidence and develop your work skills. This cutting-edge course will prepare you for progression to further study in computing and software development. Full-time and part-time courses are available.

D) 3D Studio. 3D Studio has a fun 34-week photo challenge. All courses are led by a professional photographer who has specific skills to teach you. By learning with 3D Studio you will be taken to the best places and venues in the countryside. The course takes place on Saturdays, 3.30-6.00 p.m.

E) Adam Elliot Studio. During this workshop students will be taught the classical methods of oil painting used by Italian and Flemish masters of the late 16th and early 17th centuries. This workshop is suitable for students of all levels of experience. Classes are on Monday and Wednesday from 9-11 a.m.

F) Santa Reparata. The main aim of this short course is to provide an introduction to one of the most fascinating period of the Italian Art. The one week painting course is suitable for absolute beginners. Classes are from 6.30-9.30 p.m. Monday to Friday.

G) Rising Stars. We believe sports are for winners! We offer training from professional sports coaches to help you become a more successful player. Choose from a range of team and racket sports. Players are encouraged to join local and national leagues. Classes: every Saturday and Sunday, or book an individual lesson with one of our trainers.

H) The Art Academy. This is an informative, intensive, and fun weekend course, which teaches essential drawing skills. Through various drawing approaches including life drawing, portraiture and still life, you will learn to understand texture, line, measurement and composition.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

I) Health benefits of soursops
II) The soursop tree
III) Side effects of soursops
IV) Effectiveness in destroying cancerous cells
V) Recent scientific discoveries on the tree
VI) Nutrients in soursop fruits
VII) The soursop fruit
VIII) The use of various parts of the tree

15. Paragraph A **16. Paragraph B** **17. Paragraph C**
18. Paragraph D **19. Paragraph E** **20. Paragraph F**

SOURSOP FRUIT

A. The soursop tree is known for its delicious fruits. The fruit is large with a thin, green-colored skin covered with conical nibs. The pulp is white and soft, and quite delicious. It has both sweet and sour taste. The fruit can be eaten directly, or its pulp can be pressed and strained to extract the juice, which is not only delectable, but also rich in many essential nutrients.

B. The flesh or pulp of the fruit, from which the juice is extracted, is very rich in fiber, carbohydrates, and other nutrients, like vitamin B1 and B2, vitamin C, and potassium. On the other hand, it is quite low in saturated fats and sodium. About 1 cup of undiluted juice or nectar contains 160 calories.

C. The soursop tree is mainly known for its medicinal properties. Certain compounds found in the extracts derived from the fruits, seeds, bark, and the leaves of the soursop tree have been observed to be effective in destroying cancerous cells in some laboratory studies. The leaves of this tree have been found to be particularly effective in killing cancer cells without harming the healthy cells of the body. Moreover, the extract derived from the leaves does not affect the immune system adversely, unlike the chemotherapy drugs.

D. Apart from the ability to kill cancer cells, the soursop tree has several other health benefits. The seeds of this fruit can be used for inducing vomiting, while the juice can be immensely beneficial for treating urethritis. It can also help treat hematuria which is a condition characterized by the presence of blood in urine. Soursop juice can help alleviate liver ailments as well. The juice is usually taken while fasting in order to cure liver problems. It may also prove beneficial in conditions like leprosy.

E. The various parts of the tree, including its leaves and the young shoots have been used for conditions, like cough, catarrh, fever, gallbladder problems, inflammation and swelling, diarrhea, indigestion, rheumatism, dysentery, eczema, and some other skin problems. The pulp of the fruit, as well as the crushed leaves of the tree, can be used as a poultice to ensure fast healing of wounds.

F. To sum up, soursop is not only a delicious, but also a very nutritious fruit. However, it is imperative to talk to a physician before considering to use it for medicinal purposes. If taken in large dosage, it can induce vomiting and depress the

cardiovascular system. It can also induce uterine contractions, for which pregnant women should not use this fruit for medicinal purposes. All these possible side effects need to be considered before using this fruit, or any other part of the tree for the treatment of cancer and other ailments.

PART 4 Questions 21–29

Read the following text for questions 21-29.

THE CONTRIBUTION OF LANGUAGE TO BUSINESS

People say that business is all about relationships, but the truth is that business is really all about language communication. Languages make either a direct or indirect contribution to business and industry—from acquiring and retaining customers to improving employee engagement and performance. At the most fundamental level, business cannot happen without communication. This is even more true in the era of globalization. As geographic borders become porous and the world flattens, effective communication with customers, employees, partners, suppliers, and other stakeholders across the globe becomes essential to successfully running a company.

There is no universal agreement on how significant the language factor is; nor the degree of language proficiency in contribution to the success of business and industry. In large modern enterprises, people have the unique experience of working with thousands of organizations across different industries and sectors that are tackling this very problem. Companies adjust to these demographic, cultural, and economic trends and proactively build workforces with the skills and capabilities needed to grow and thrive in this multicultural and international economy. Although the combination of business functions and processes impacted by improved communication may vary from company to company, language skills consistently deliver tangible business value and results for organizations that invest in language training.

Although English is dominant for international transactions, many business people also think and deal in scores of languages. Companies that operate solely in English will miss opportunities to capitalize on the explosive growth in developing and untapped markets at home and abroad. These companies also run the risk of misunderstandings with customers, and with members of an increasingly global workforce. Moreover, travellers on business need to have different levels of language proficiency. On a basic level, they are able to use the language at the airport and to check in at the hotel. Besides, they need a high language proficiency to deal with workers at their offshore factories.

One of the biggest business advantages of a workforce that can effectively communicate in more than one language is the ability to reach new markets—both at home and abroad. On the domestic side, for example, the U.S. has become even more of a melting pot than in the past, with minorities accounting for a greater proportion of the total population. Accordingly, in domestic venues, the consumer contacts and service activities also ask for workers with good skills of different languages, such as at restaurants or in duty-free stores.

The language proficiency needed to hold a conversation is quite different from that needed for negotiating. Receptionists and telephonists are the first point of contact between firms. The language proficiency they need is to gather basic factual information. Yet negotiating well in another language is one of the most difficult skills, especially nowadays when it is often done at a distance by videoconference, teleconference or email. It is also one of the most important things to do well, with usually a clear financial penalty for doing it badly. To really master the negotiating skill, negotiators need a thorough understanding of the very many phrases they might hear during a negotiation and an ability to show fine shades in meaning in their own contributions. Similar to negotiating, certain occupations like shipping, also require unbroken and detailed communication between officials.

When it comes to negotiation, the interpreters and translators are needed. Interpreters and translators aid communication by converting messages or text from one language into another language. Although some people do both, interpreting and translating are different professions: interpreters work with spoken communication, and translators work with written communication. The selection of interpreters and translators is critical. Both the loyalty and accuracy of the interpreters and translators must be put at the top of agenda. Thus, loyalty to the speaker and the original appears to be a hallmark of professionals more so than of amateurs.

Who can judge the performance of the interpreters? A person with language proficiency is needed in the negotiating team to check on the interpreters, guaranteeing the quality and accuracy of the interpretation. Listeners are presumably listening only to the output and as such not aware of the structure of the source speech. Only an experienced expert will understand the constraints of any given situation and be in a position to judge. Only she (or he) can assess just how the speed, density and complexity of the speech will affect interpretation in any particular language combination. And even this task is not easy: interpreters are trained to listen and speak at the same time, not to listen to two different audio streams. Therefore, the check-on is best accomplished by those trained to teach or with enough experience to have mastered this skill.

Businesses may ask help from local consultants who are responsible for hiring local workers or train company managers to deal with local consumers. That was the case with CommScope, a multibillion dollar telecom equipment manufacturer with customers, employees, and partners in 18 countries across the world. In the wake of these transactions, the company began offering Jacqueline K. Crofton, a local resident, language training to key employees and executives. The goal of the training was not to make employees fluent in the new language, as much as to give them a degree of functional proficiency. "In order to advance well in new markets and with new customers, we had to be able to at least understand and communicate at a basic level, even with the use of interpreters," says David Hartsoe, manager of CommScope's Global Learning Center. In the long run, effective communication will definitely help their employees stay positive and productive.

Do the following statements agree with the information given in the text?

21 There are two types of contribution that languages make to business.

A) True
B) False
C) Not Given

22 **All businesses have recognized the importance of language to business.**

A) True
B) False
C) Not Given

23 **English is the most important language for all business purposes.**

A) True
B) False
C) Not Given

24 **Senior executives, especially, need to be fluent in the language of their trading partners.**

A) True
B) False
C) Not Given

25 **Travellers on business need several different levels of language proficiency.**

A) True
B) False
C) Not Given

26 **Some businesses provide interpreter training to their employees.**

A) True
B) False
C) Not Given

For questions 27-29, choose the correct answer A, B, C, or D.

27 **One of the most important qualities of the interpreter is**

A) common sense.
B) industry knowledge and contacts.
C) appropriate reaction.
D) trustworthiness.

28 **A qualified interpreter is essential to the business for**

A) ensuring cultural appropriateness.
B) accuracy of information.
C) success in trading.
D) financial reasons.

29 **In the writer's opinion, hiring an indigenous person to improve the dialect language proficiency of the company staff is**

A) unethical.
B) unlikely.
C) sensible.
D) expensive.

PART 5 Questions 30–35

Read the following text for questions 30-35.

ARCHITECTURE IN BRITAIN

From the Middle Ages to the 20th century, what are the influences and movements that have shaped the changing face of British architecture?

Romano-British culture—and that included architecture along with language, religion, political organisation and the arts—survived long after the Roman withdrawal. And although the Anglo-Saxons had a sophisticated building style of their own, little survives to bear witness to their achievements as the vast majority of Anglo-Saxon buildings were made of wood.

Even so, the period between the Norman landing at Pevensey in 1066 and the day in 1485 when Richard III lost his horse and his head at Bosworth, ushering in the Tudors and the Early Modern period, marks a rare flowering of British buildings. And it is all the more remarkable because the underlying ethos of medieval architecture was "fitness for purpose". The great cathedrals and parish churches that lifted up their towers to heaven were not only acts of devotion in stone; they were also fiercely functional buildings. Castles served their particular purpose and their battlements and turrets were for use rather than ornament. The rambling manor houses of the later Middle Ages, however, were primarily homes, their owners achieving respect and maintaining status by their hospitality and good lordship rather than the grandeur of their buildings. In a sense, the buildings of the 16th century were also governed by fitness for purpose—only now, the purpose was very different. In domestic architecture, in particular, buildings were used to display status and wealth.

This stately and curious workmanship showed itself in various ways. A greater sense of security led to more outward-looking buildings, as opposed to the medieval arrangement where the need for defence created houses that faced inward onto a courtyard or series of courtyards. This allowed for much more in the way of exterior ornament. The rooms themselves tended to be bigger and lighter—as an expensive commodity, the use of great expanses of glass was in itself a statement of wealth. There was also a general move towards balanced and symmetrical exteriors with central entrances. With the exception of Indigo Jones (1573-1652), whose confident handling of classical detail and proportion set him apart from all other architects of the period, most early 17th century buildings tended to take the innocent exuberance of late Tudor work one step further. But during the 1640s and 50s the Civil War and its aftermath sent many gentlemen and nobles to the Continent either to escape the fighting or, when the war was lost, to follow Charles II into exile. There they came into contact with French, Dutch and Italian architecture and, with Charles's restoration in 1660, there was a flurry of building activity as royalists reclaimed their property and built themselves houses reflecting the latest European trends. The British Baroque was a reassertion of authority, an expression of absolutist ideology by men who remembered a world turned upside down during the Civil War. The style is heavy and rich, sometimes overblown and melodramatic. The politics which underpin it are questionable, but its products are breathtaking.

The huge glass-and-iron Crystal Palace, designed by Joseph Paxton to house the Great Exhibition of 1851, shows another strand to 19th century architecture—one which embraced new industrial processes. But it wasn't long before even this confidence in progress came to be regarded with suspicion. Mass production resulted in buildings and furnishings that were too perfect, as the individual craftsman no longer had a major role in their creation. Railing against the dehumanising effects of industrialisation, reformers like John Ruskin and William Morris made a concerted effort to return to hand-crafted, pre-industrial manufacturing techniques. Morris's influence grew from the production of furniture and textiles, until by the 1880s a generation of principled young architects was following his call for good, honest construction.

The most important trends in early 20th century architecture simply passed Britain by. Whilst Gropius was working on cold,

hard expanses of glass, and Le Corbusier was experimenting with the use of reinforced concrete frames, we had staid establishment architects like Edwin Lutyens producing Neo-Georgian and Renaissance country houses for an outmoded landed class. In addition there were slightly batty architect-craftsmen, the heirs of William Morris, still trying to turn the clock back to before the Industrial Revolution by making chairs and spurning new technology. Only a handful of Modern Movement buildings of any real merit were produced here during the 1920s and 1930s, and most of these were the work of foreign architects such as Serge Chermayeff, Berthold Lubetkin and Erno Gold-finger who had settled in this country.

Complete the sentences. Write NO MORE THAN THREE WORDS from the text in each gap.

Because most Anglo-Saxon buildings were constructed from **30** _____, few of them have survived.

The owners of medieval manor houses in Britain earned their reputation through their **31** _____ and elegance.

The 16th-century building was designed to show evidence of **32** _____.

In the 16th century, the use of glass was fashionable, even though it was an **33** _____.

Indigo Jones was particularly skilful in designing architecture in the **34** _____ style.

Though William Morris designed **35** _____, his emphasis on hand-crafting influenced architects.

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

VISITING THE ROYAL PARKS

London has a well-deserved reputation as one of the greenest cities in Europe, with a huge number of open spaces across the center of the city. Tourists who are tired of the noise, crowds and excitement of sightseeing can always relax in a lovely, quiet **Q1**_____ park.

The Royal Parks, such as St James's, Green Park, the Regent's Park, Hyde Park, Richmond, Greenwich, Bushy Park and Kensington Gardens, are beautifully maintained and popular with locals and visitors alike. Many are former hunting estates of English monarchs, preserved as **Q2**_____ space while the city has grown up around them. They are ideal places to **Q3** _____ and sunbathe in summer, enjoy gorgeous flower beds in spring and admire the changing leaves as autumn arrives.

The Royal Parks provide fantastic green routes in **Q4** _____ that take cyclists away from traffic and through some of the most attractive areas of the capital. Picnics in the **Q5**_____ are also a popular activity especially during the busy summer months.

Q6_____ are welcome in all the Royal Parks, although there are some places where they are not allowed or should be kept on a lead. These are clearly indicated within each park and are usually ecologically sensitive sites, children's play areas, restaurants, cafes and some sports areas. Ground nesting birds are particularly sensitive to disturbance by dogs and people. So it is necessary to observe the warning signs that are displayed during the nesting season. In Bushy Park and Richmond Park dogs should be kept away from the deer.

The Royal Parks are for everyone to enjoy.

PART 2

Questions 7–13

You want to visit a sea life centre. There are descriptions of ten sea life centres. Decide which sea life centre would be the most suitable for you. For questions 7–13, mark the correct letter (A–J) on your answer sheet.

7

Person 7

You are studying sea creatures that are disappearing due to environmental changes, and want to attend a talk about them. You are also interested in learning about what's living on the beaches nearby.

8

Person 8

Your art project is on colourful fish so you want to draw some, and take home some photos of unusual sea creatures. You and your family also want to swim at the centre afterwards.

9

Person 9

You are interested in tiny sea animals, and want to actually handle them and learn what conditions they need to live in. You'd also enjoy seeing a feeding session for the larger creatures.

10

Person 10

You are interested in creatures living in cold climates, and how they find food. You'd like to create something for your art homework too, and learn about photographing underwater wildlife.

11

Person 11

You would love to swim with fish at the centre. You'd also like to learn about a range of sea environments, and about unusual creatures living at the bottom of our oceans.

12

Person 12

You and your boss want somewhere with lots of space where you can sit and enjoy the view. Your boss would not manage a difficult walk to the beach. You want to eat lunch in a café.

13

Person 13

You and Jenny have two children who cannot swim. Jenny wants them to be able to play safely in the water. You want to learn to sail. You need to park near the beach.

A) Amrith. A large beach which attracts quite a few visitors but doesn't get crowded because of its size. There are pleasant views out to sea and to Bedruth Island. Swimming is safe but surfing is not permitted. There is a café and parking but no shops.

B) Rockwater. We have sea creatures from both warm and cooler waters in our huge glass tanks. You can even go into the water in one, accompanied by staff – ask at the desk! We've also got fish that are rarely seen, as they're normally found in the very deepest water on our planet. No photography is allowed.

C) Splashdown. Perfect for family fun – our tropical swimming pool that's only divided from the penguins next door by a glass wall! See them swimming in their pool while you're in yours! And don't miss their mealtimes - watch as they dive for their food.

D) Waterlife. We've got some of the rarest fish in the world, and the most beautiful. See the clown fish with its bright yellow and white stripes! Cameras aren't allowed, but amazing professional pictures are available in our shop. Then once you've seen everything, relax in our fantastic warm pool – strictly for humans!

E) Brightworld. Many creatures here are normally found in environments with low temperatures, such as our big group of penguins. Come and see our amazing displays of photos showing these birds diving for their supper! There are also short talks on using your camera for great shots of fish, and painting sessions, too.

F) Marine Life. Keen to protect our oceans? Come and see the work we're doing – there are presentations about it every hour. For example, we try to help shark numbers worldwide remain at healthy levels. And visit our amazing rock pool displays full of tiny creatures, typical of ones that make their homes near the sea just metres away!

G) Oceanwatch. The focus is on science here – there are films throughout the day about oceans around the world and the environmental problems facing marine wildlife. There's plenty to learn, and lots of souvenirs to buy! Free brochures full of information.

H) Waterlife. See some of the smallest sea life such as shrimps and starfish at our rock pool display - and even pick them up! Find out how clean sea water is essential to these creatures, and the effects of pollution. And don't miss watching the penguins and seals have their lunch – that's really popular!

I) Marple. Although unsuitable for surfing, this is a popular boating centre. Swimming is good and the many pools of shallow water are safe for children. Ocean Watersports Centre, which offers lessons in sailing and water skiing, is next to the beach. There is a steep path to the beach from the car park.

J) Goldenwave. Come and see the variety of warm sea environments at this centre – and creatures so small you might not have noticed them living on the beach, or the most beautiful fish living in our oceans. Bring your camera and learn to take the best photos ever!

PART 3

Questions 14–19

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

I) Perfect for a quiet holiday
II) Land of nature wonders
III) Bad for animals
IV) A visit to the zoo
V) Perfect for an active holiday
VI) Difficult start
VII) New perspectives
VIII) New rules to follow

14. Paragraph A **15. Paragraph B** **16. Paragraph C**
17. Paragraph D **18. Paragraph E** **19. Paragraph F**

A. The mountains of Scotland (we call them the Highlands) are a wild and beautiful part of Europe. A golden eagle flies over the mountains. A deer walks through the silence of the forest. Salmon and trout swim in the clean, pure water of the rivers. Some say that not only fish swim in the deep water of Loch Ness. Speak to the people living by the Loch. Each person has a story of the monster, and some have photographs.

B. Tresco is a beautiful island with no cars, crowds or noise — just flowers, birds, long sandy beaches and the Tresco Abbey Garden. John and Wendy Pyatt welcome you to the Island Hotel, famous for delicious food, comfort and brilliant service. You will appreciate superb accommodation, free saunas and the indoor swimming pool.

C. The Camel and Wildlife Safari is a unique mixture of the traditional and modern. Kenya's countryside suits the Safari purposes exceptionally well. Tourists will have a chance to explore the bush near Samburu, to travel on a camel back or to sleep out under the stars. Modern safari vehicles are always available for those who prefer comfort.

D. Arrival can be the hardest part of a trip. It is late, you are road-weary, and everything is new and strange. You need an affordable place to sleep, something to eat and drink, and probably a way to get around. But in general, it's a wonderful trip, full of wonderful and unusual places. Whether it is the first stop on a trip or the fifth city visited, every traveller feels a little overwhelmed stepping onto a new street in a new city.

E. No zoo has enough money to provide basic habitats or environments for all the species they keep. Most animals are put in a totally artificial environment, isolated from everything they would meet in their natural habitat. Many will agree that this isolation is harmful to the most of zoo inhabitants, it can even amount to cruelty.

F. A new London Zoo Project is a ten year project to secure the future for the Zoo and for many endangered animals. The plan has been devised by both animal and business experts to provide world-leading accommodation for all our animals, to more fully engage and inform people about conservation issues, to redesign certain aspects of Zoo layout.

PART 4 Questions 20–27

Read the following text for questions 20-27.

BRING BACK THE BIG CATS

It's time to start returning vanished native animals to Britain, says John Vesty

There is a poem, written around 598 AD, which describes hunting a mystery animal called a llewyn. But what was it? Nothing seemed to fit, until 2006, when an animal bone, dating from around the same period, was found in the Kinsey Cave in northern England. Until this discovery, the lynx – a large spotted cat with tasselled ears – was presumed to have died out in Britain at least 6,000 years ago, before the inhabitants of these islands took up farming. But the 2006 find, together with three others in Yorkshire and Scotland, is compelling evidence that the lynx and the mysterious llewyn were in fact one and the same animal. If this is so, it would bring forward the tassel-eared cat's estimated extinction date by roughly 5,000 years.

However, this is not quite the last glimpse of the animal in British culture. A 9th-century stone cross from the Isle of Eigg shows, alongside the deer, boar and aurochs pursued by a mounted hunter, a speckled cat with tasselled ears. Were it not for the animal's backside having worn away with time, we could have been certain, as the lynx's stubby tail is unmistakable. But even without this key feature, it's hard to see what else the creature could have been. The lynx is now becoming the totemic animal of a movement that is transforming British environmentalism: rewilding.

Rewilding means the mass restoration of damaged ecosystems. It involves letting trees return to places that have been denuded, allowing parts of the seabed to recover from trawling and dredging, permitting rivers to flow freely again. Above all, it means bringing back missing species. One of the most striking findings of modern ecology is that ecosystems without large predators behave in completely different ways from those that retain them. Some of them drive dynamic processes that resonate through the whole food chain, creating niches for hundreds of species that might otherwise struggle to survive. The killers turn out to be bringers of life.

Such findings present a big challenge to British conservation, which has often selected arbitrary assemblages of plants and animals and sought, at great effort and expense, to prevent them from changing. It has tried to preserve the living world as if it were a jar of pickles, letting nothing in and nothing out, keeping nature in a state of arrested development. But ecosystems are not merely collections of species; they are also the dynamic and ever-shifting relationships between them. And this dynamism often depends on large predators.

At sea the potential is even greater: by protecting large areas from commercial fishing, we could once more see what 18th-century literature describes: vast shoals of fish being chased by fin and sperm whales, within sight of the English shore. This policy would also greatly boost catches in the surrounding seas; the fishing industry's insistence on scouring every inch of seabed, leaving no breeding reserves, could not be more damaging to its own interests.

Rewilding is a rare example of an environmental movement in which campaigners articulate what they are for rather than only what they are against. One of the reasons why the enthusiasm for rewilding is spreading so quickly in Britain is that it helps to create a more inspiring vision than the green movement's usual promise of 'Follow us and the world will be slightly less awful than it would otherwise have been.'

The lynx presents no threat to human beings: there is no known instance of one preying on people. It is a specialist predator of roe deer, a species that has exploded in Britain in recent decades, holding back, by intensive browsing, attempts to re-establish forests. It will also winkle out sika deer: an exotic species that is almost impossible for human beings to control, as it hides in impenetrable plantations of young trees. The attempt to reintroduce this predator marries well with the aim of bringing forests back to parts of our bare and barren uplands. The lynx requires deep cover, and as such presents little risk to sheep and other livestock, which are supposed, as a condition of farm subsidies, to be kept out of the woods.

On a recent trip to the Cairngorm Mountains, I heard several conservationists suggest that the lynx could be reintroduced there within 20 years. If trees return to the bare hills elsewhere in Britain, the big cats could soon follow. There is nothing extraordinary about these proposals, seen from the perspective of anywhere else in Europe. The lynx has now been reintroduced to the Jura Mountains, the Alps, the Vosges in eastern France and the Harz mountains in Germany, and has re-established itself in many more places. The European population has tripled since 1970 to roughly 10,000. As with wolves, bears, beavers, boar, bison, moose and many other species, the lynx has been able to spread as farming has left the hills and people discover that it is more lucrative to protect charismatic wildlife than to hunt it, as tourists will pay for the chance to see it. Large-scale rewilding is happening almost everywhere – except Britain.

Here, attitudes are just beginning to change. Conservationists are starting to accept that the old preservation-jar model is failing, even on its own terms. Already, projects such as Trees for Life in the Highlands provide a hint of what might be coming. An organisation is being set up that will seek to catalyse the rewilding of land and sea across Britain, its aim being to reintroduce that rarest of species to British ecosystems: hope.

Write the correct letter, A, B, C or D.

20 What did the 2006 discovery of the animal bone reveal about the lynx?

A) Its physical appearance was very distinctive.
B) Its extinction was linked to the spread of farming.
C) It vanished from Britain several thousand years ago.
D) It survived in Britain longer than was previously thought.

21 What point does the writer make about large predators in the third paragraph?

A) Their presence can increase biodiversity.
B) They may cause damage to local ecosystems.
C) Their behaviour can alter according to the environment.
D) They should be reintroduced only to areas where they were native.

22 What does the writer suggest about British conservation in the fourth paragraph?

A) It has failed to achieve its aims.
B) It is beginning to change direction.
C) It has taken a misguided approach.
D) It has focused on the most widespread species.

23 **Protecting large areas of the sea from commercial fishing would result in**

A) practical benefits for the fishing industry.
B) some short-term losses to the fishing industry.
C) widespread opposition from the fishing industry.
D) certain changes to techniques within the fishing industry.

24 **According to the author, what distinguishes rewilding from other environmental campaigns?**

A) Its objective is more achievable.
B) Its supporters are more articulate.
C) Its positive message is more appealing.
D) It is based on sounder scientific principles.

Do the following statements agree with the information given in the reading passage? Write TRUE if the statement agrees with the information, FALSE if the statement contradicts the information, NOT GIVEN if there is no information on this.

25 **Britain could become the first European country to reintroduce the lynx.**

A) True
B) False
C) Not Given

26 **The large growth in the European lynx population since 1970 has exceeded conservationists' expectations.**

A) True
B) False
C) Not Given

27 **Changes in agricultural practices have extended the habitat of the lynx in Europe.**

A) True
B) False
C) Not Given

PART 5 Questions 28–35

Read the following text for questions 28-35.

COMMUNICATION IN SCIENCE

Science plays an increasingly significant role in people's lives, making the faithful communication of scientific developments more important than ever. Yet such communication is fraught with challenges that can easily distort discussions, leading to unnecessary confusion and misunderstandings.

Some problems stem from the esoteric nature of current research and the associated difficulty of finding sufficiently faithful terminology. Abstraction and complexity are not signs that a given scientific direction is wrong, as some commentators have suggested, but are instead a tribute to the success of human ingenuity in meeting the increasingly complex challenges that nature presents. They can, however, make communication more difficult. But many of the biggest challenges for science reporting arise because in areas of evolving research, scientists themselves often only partly understand the full implications of any particular advance or development. Since that dynamic applies to most of the scientific developments that directly affect people's lives – global warming, cancer research, diet studies – learning how to overcome it is critical to spurring a more informed scientific debate among the broader public.

Ambiguous word choices are the source of some misunderstandings. Scientists often employ colloquial terminology, which they then assign a specific meaning that is impossible to fathom without proper training. The term "relativity," for example, is intrinsically misleading. Many interpret the theory to mean that everything is relative and there are no absolutes. Yet although the measurements any observer makes depend on his coordinates and reference frame, the physical phenomena he measures have an invariant description that transcends that observer's particular coordinates. Einstein's theory of relativity is really about finding an invariant description of physical phenomena. True, Einstein agreed with the idea that his theory would have been better named "Invarianten theorie." But the term "relativity" was already entrenched at the time for him to change.

"The uncertainty principle" is another frequently abused term. It is sometimes interpreted as a limitation on observers and their ability to make measurements.

But it is not about intrinsic limitations on any one particular measurement; it is about the inability to precisely measure particular pairs of quantities simultaneously? The first interpretation is perhaps more engaging from a philosophical or political perspective. It's just not what the science is about.

Even the word "theory" can be a problem. Unlike most people, who use the word to describe a passing conjecture that they often regard as suspect, physicists have very specific ideas in mind when they talk about theories. For physicists, theories entail a definite physical framework embodied in a set of fundamental assumptions about the world that lead to a specific set of equations and predictions – ones that are borne out by successful predictions. Theories aren't necessarily shown to be correct or complete immediately. Even Einstein took the better part of a decade to develop the correct version of his theory of general relativity. But eventually both the ideas and the measurements settle down and theories are either proven correct, abandoned or absorbed into other, more encompassing theories.

"Global warming" is another example of problematic terminology. Climatologists predict more drastic fluctuations in temperature and rainfall – not necessarily that every place will be warmer. The name sometimes subverts the debate, since it lets people argue that their winter was worse, so how could there be global warming? Clearly "global climate change" would have been a better name. But not all problems stem solely from poor word choices. Some stem from the intrinsically complex nature of much of modern science. Science sometimes transcends this limitation: remarkably, chemists were able to detail the precise chemical processes involved in the destruction of the ozone layer, making the evidence that chlorofluorocarbon gases (Freon, for example) were destroying the ozone layer indisputable.

Choose the correct letter A, B, C or D.

28 **Why is faithful science communication important?**

A) Science plays an increasingly significant role in people's lives.
B) Science is fraught with challenges public are interested in.
C) The nature of complexity in science communication leads to confusion.
D) Scientific inventions are more important than ever before.

29 **What is the reason that the author believes for the biggest challenges for science reporting?**

A) A phenomenon such as global warming, cancer research, diet studies is too complex.
B) Scientists themselves often only partly understand the Theory of Evolution.
C) Scientists do not totally comprehend the meaning of certain scientific evolution.
D) Scientists themselves often partly understand the esoteric communication nature.

30 **According to the 3rd paragraph, the reference to the term and example of "theory of relativity" is to demonstrate**

A) theory of relativity is about an invariant physical phenomenon.
B) common people may be misled by the inaccurate choice of scientific phrase.
C) the term "relativity," is designed to be misleading public.
D) everything is relative and there is no absolutes existence.

Complete the following summary of the paragraphs of Reading Passage. Using NO MORE THAN TWO WORDS from the Reading Passage for each answer.

Science Communication is fraught with challenges that can easily distort discussions, leading to unnecessary confusion and misunderstandings. Firstly, Ambiguous **31** _____ are the source of some misunderstandings. Common people without proper training do not understand clearly or deeply a specific scientific meaning via the **32** _____ scientists often employed. Besides, the measurements any **33**_____ makes can not be confined to describe in a(n) constant **34**_____ yet the phenomenon can be. What's more, even the word "theory" can be a problem. Theories aren't necessarily shown to be correct or complete immediately since scientists often evolved better versions of specific theories, a good example can be the theory of **35**_____. Thus, most importantly people have to recognize that science can be complex.

PART 1

Questions 1–8

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

FIRE CREWS HUNT ESCAPED HAMSTER

Eight firefighters have been called in to help find an escaped hamster. Two crews used a chocolate-covered camera and a vacuum cleaner to try and locate the missing **Q1**_____, called Fudgie, at the home of a six-year-old girl in Dunbar, Scotland.

The girl's mother said: 'We came down for breakfast and discovered Fudgie had opened the top lid of her cage and had made her way into the kitchen and we think she has gone through a small hole in the floor.'

The fire crews spent five hours trying to recover the pet after it ran down a hole in the kitchen floor. But, the hamster still refused to come out of the **Q2**_____.

In the search for **Q3**_____, the firefighters took the family cooker and gas pipes apart. They also dropped a mini-camera coated with chocolate under the floorboards. They then hoped to take out the hamster using a vacuum cleaner. Despite all their efforts, they failed to find Fudgie.

In the end, the **Q4**_____ put another camera down the hole and left it under the floorboards, connected to the screen of the family home computer, to see if Fudgie appeared. Besides, the **Q5**_____ and her parents regularly dropped food through the **Q6**_____ for the **Q7** _____

At last, after eight days the hamster returned to her cage safe and sound. She crawled from the hole in the kitchen floor early in the morning. It was the girl's father who first found Fudgie and locked the runaway hamster.

The girl said that day it was like Christmas morning for her. Her parents added that they too felt extremely happy when Fudgie had finally **Q8**_____.

PART 2

Questions 9–13

The people all want to attend a course. Read the descriptions of eight courses. Decide which course would be the most suitable for each person. For Questions 9-13, select the best course.

9

Person 9

Harriet is 71, and is interested in painting and drawing. She would like to go somewhere in the summer where she can learn new tips and paint attractive scenery.

10

Person 10

Belinda works for a large Art Company and she feels she needs to improve her computer skills. She already has a basic understanding of some common computer programmes, but she wants to learn how to organise her work and store information.

11

Person 11

Jenny is interested in a career in design, and wants to learn how to create art and change photographs using special computer programmes. She wants a course that will fit into her normal school day.

12

Person 12

George is unable to travel because he has difficulty walking, but he wants to learn more about the wildlife and scenery in different parts of the world.

13

Person 13

Chris wants a change in career, so he's looking for a full-time course in which he can learn everything there is to know about photography and how to use computers to change and sell his work.

A) Form and Colour. This is year-long course is perfect for people who want to learn about how to use a camera and who want to take it up as a profession. Students will learn how to use light and shade, colour and different shapes. The course will also teach students to change their work using computer technology. Tips will be given on how best to get started in the profession.

B) Practice makes Perfect. Learn about how to use computer software to make your work life easier. This course is designed for people who use computers regularly as part of their career, but who feel they are unable to make the most of the technology. Learn about new software for storing documents and photographs and keeping records. This evening class runs for ten weeks from September to December.

C) Armchair Explorer. This is a series of daytime lectures by people who have lived and worked in wild places. Each of the six talks will focus on a different continent. Lecturers will show photographs of the animals and plants, and explain why they are only found in one area. Lecturers will include Leo Holland, a scientist from the Antarctic project, and Milly Oliphant, who researches birds in the Amazon rainforest. Tea and Biscuits provided.

D) Art Starter. Are you interested in a career in art? If so, this full-time, eight-week course will be perfect for you. Learn about different methods used by artists, including painting, drawing, photography and computer design. Artists will create work for an exhibition which will be displayed in the Town Hall for one month in September. Top businessmen and women from the design industry will be invited to attend the exhibition, so this could be a great start to your career!

E) Wild Design. Whether you want a career in art, or you just want to enjoy your hobby, this holiday course is for you. Wild Design is a two-week summer course situated on the wild coast of South Wales. We teach all kinds of art, including photography and painting, and the wild sea, beautiful flowers and great wildlife will definitely give you lots of creative ideas. Even if you already have a good understanding of art, you are sure to learn something new from our team of professional tutors.

F) Explore your Imagination. Do you want to show your friends a photograph of you beside the Egyptian pyramids or in the jungles of Borneo? Well now you can tell your friends that you have travelled the world without actually leaving the country! Join this evening class and learn how to use the latest technology and software to change photographs to a professional standard. You will also learn how to make your own computer designs using the computer programmes used by professionals.

G) Technology for You. Do you feel as if everyone is using a computer except you? Join in this five-day course and learn the basics. You'll learn how to store your personal files, send emails and use simple programmes to write and print letters. In the afternoons you will have the choice of either learning how to make Birthday Cards and other designs on a computer, or you can join our 'Basic computers for Work' class.

H) Wildlife Photographer. Travel to a different wild place every week and learn how to take photographs of animals, plants and scenery. Our expert teachers will advise you how to take the best pictures. This course will run for six weeks on Saturdays. Students should already have a good understanding of photography and their own equipment. The class is suitable for everyone, as there is very little walking involved.

PART 3

Questions 14–21

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

1) Failing relationships and negative feelings
2) Winning the lottery may not make you happier
3) What is Hedonic Adaptation?
4) Philanthropy benefits the giver
5) Wealth management issues
6) Spend your winnings wisely
7) What you do, not what you buy
8) Behavioral Changes
9) Case of Lisa Arcand

14. Paragraph A **15. Paragraph B** **16. Paragraph C**
17. Paragraph D **18. Paragraph E** **19. Paragraph F**
20. Paragraph G **21. Paragraph H**

A. This is partially due to a phenomenon called hedonic adaptation or the hedonic treadmill. This describes our tendency to become used to the happiness after experiencing it for the first time. For example, landing the job that you have always wanted may give you happiness but the thrill wears off after a certain period of time. Though it may sound a little bit counterintuitive, hedonic adaptation helps us maintain a steady and emotional equilibrium which makes us less sensitive to any changes including negative events. This phenomenon allows us to revert back to our default emotional state after experiencing high levels of emotion whether good or bad.

B. Piecing together this information, winning the lottery would make you happy but only for a short period of time. After getting used to the luxuries of having enough funds for grandiose homes, better food, and nicer clothes, we go back to how we used to feel before we won the prize. Therefore, winning the lottery doesn't guarantee happiness, in fact, lottery winners even reported being unhappy after they have won the prize.

C. One of the reasons why this is so is because large sums of money can be a lot to manage. Take for example the case of Lisa Arcand from Massachusetts. She won $1 million in 2004 and like all winners, she went on lavish vacations and bought a nice house. However, a million dollars isn't much for taxes; she even opened a restaurant to keep the cash flowing but to no avail, losing everything in 2007. Another example is Michael Caroll who turned from lottery winner to factory worker, even after winning £9.7 million in 2002. Janite Lee, Willie Hurt, and Lou Eisenberg, are just some of the many names that have won the lottery but went from rags to riches and back to rags because of poor financial decisions.

D. Aside from difficulty in managing finances, winning the lottery can be an isolating experience. Unwanted attention and unwanted requests for money from peers can make us paranoid and anxious. Eventually, lottery winners wind up cutting themselves from others because of the fear of being used as a just a source of money than a source of friendship.

E. While the constant fear of losing everything can haunt lottery winners, some even become greedier than they were before winning. A study conducted by social-psychologist Paul Piff at

the UC Berkeley Campus in California, proves that gaining wealth can actually change our behaviour drastically. Using a rigged game of Monopoly, Piff chose a player at random to play the game at a certain advantage such as more starting money, and better ability to move around the board. In just after 15 minutes, the advantaged players displayed dramatic change in behaviour including forceful movement of boardgame pieces, speaking louder, and even minute things such as eating more snacks compared to other players.

F. Winning the lottery will make you happy but thanks to hedonic adaptation, the thrill and excitement of spending all that cash won't last long. While most of us would indulge in a fabulous lifestyle after winning, there are ways that winning the lottery can make us happier than having the latest supercar in your garage. It's that old saying it's not what you have, but what you do that counts. The key to happiness, it seems, is to invest in experiences. Think carefully before you start spending.

G. Having a lot of money can open new opportunities for us to enjoy life more than just having expensive things. With hedonic adaptation embedded in our systems, finding what really guarantees happiness can be a hurdle on the way. However, findings show that people tend to adapt faster to extrinsic and material things than we do on experience. Travelling, exploring, and even learning a new skill, gives us more gratification than having the latest clothes from your favourite designer or luxury brand. Therefore, investing in experiences makes us happier than investing in things.

H. Another thing that would help you convert your money into happiness is through charity. Believe it or not, giving others provides more happiness than spending it on yourself. A study by the University of British Columbia and Harvard Business School proved that spending more on others provides more happiness than spending it on yourself. Participants were asked to spend money however they wish, be it on themselves or unto others. Afterwards, a survey was conducted to rate their level of happiness. The group who donated their money to charity feel happier than those who spent it on themselves.

PART 4

Questions 22–30

Read the following text for questions 22-30.

BRITAIN NEEDS STRONG TV INDUSTRY

Comedy writer Armando Iannucci has called for an industry-wide defence of the BBC and British programme-makers. "The Thick of It" creator made his remarks in the annual MacTaggart Lecture at the Edinburgh TV Festival.

"It's more important than ever that we have more strong, popular channels... that act as beacons, drawing audiences to the best content," he said. Speaking earlier, Culture Secretary John Whittingdale rejected suggestions that he wanted to dismantle the BBC.

'Champion supporters'

Iannucci co-wrote "I'm Alan Partridge", wrote the movie "In the Loop" and created and wrote the hit "HBO" and "Sky Atlantic show Veep". He delivered the 40th annual MacTaggart Lecture, which has previously been given by Oscar winner Kevin Spacey, former BBC director general Greg Dyke, Jeremy Paxman and Rupert Murdoch. Iannucci said: "Faced with a global audience, British television needs its champion supporters."

He continued his praise for British programming by saying the global success of American TV shows had come about because they were emulating British television. "The best US shows are modelling themselves on what used to make British TV so world-beating," he said. "US prime-time schedules are now littered with those quirky formats from the UK - the "Who Do You Think You Are"'s and the variants on "Strictly Come Dancing" - as well as the single-camera non-audience sitcom, which we brought into the mainstream first. We have changed international viewing for the better."

With the renewal of the BBC's royal charter approaching, Iannucci also praised the corporation. He said: "If public service broadcasting - one of the best things we've ever done creatively as a country - if it was a car industry, our ministers would be out championing it overseas, trying to win contracts, boasting of the British jobs that would bring." In July, the government issued a green paper setting out issues that will be explored during negotiations over the future of the BBC, including the broadcaster's size, its funding and governance.

Primarily Mr Whittingdale wanted to appoint a panel of five people, but finally he invited two more people to advise on the charter renewal, namely former Channel 4 boss Dawn Airey and journalism professor Stewart Purvis, a former editor-in-chief of ITN. Iannucci bemoaned the lack of "creatives" involved in the discussions.

"When the media, communications and information industries make up nearly 8% our GDP, larger than the car and oil and gas industries put together, we need to be heard, as those industries are heard. But when I see the panel of experts who've been asked by the culture secretary to take a root and branch look at the BBC, I don't see anyone who is a part of that cast and crew list. I see executives, media owners, industry gurus, all talented people - but not a single person who's made a classic and enduring television show."

Do the following statements agree with the information given in the reading passage? Write TRUE if the statement agrees with the information, FALSE if the statement contradicts the information, NOT GIVEN if there is no information on this.

22 Armando Iannucci expressed a need of having more popular channels.

A) True
B) False
C) Not Given

23 John Whittingdale wanted to dismantle the BBC.

A) True
B) False
C) Not Given

24 Iannucci delivered the 30th annual MacTaggart Lecture.

A) True
B) False
C) Not Given

25 Iannucci believes that British television has contributed to the success of American TV-shows.

A) True
B) False
C) Not Given

26 **There have been negotiations over the future of the BBC in July.**

A) True
B) False
C) Not Given

For questions 27-30, choose the correct answer A, B, C, or D.

27 **Iannucci praised everything EXCEPT**

A) US shows
B) British shows
C) Corporation
D) British programming

28 **To advise on the charter renewal Mr Whittingdale appointed a panel of**

A) five people
B) two people
C) seven people
D) four people

29 **Who of these people was NOT invited to the discussion concerning BBC renewal?**

A) Armando Iannucci
B) Dawn Airey
C) John Whittingdale
D) Stewart Purvis

30 **The panel of experts lacks:**

A) media owners
B) people who make enduring TV-shows
C) gurus of Television industry
D) top executives

PART 5

Questions 31–35

Read the text below and answer Questions 31-35.

'DON'T BE MODEST'

Iannucci suggested one way of easing the strain on the licence fee was "by pushing ourselves more commercially abroad".

"Use the BBC's name, one of the most recognised brands in the world," he said. "And use the reputation of British television across all networks, to capitalise financially oversees. Be more aggressive in selling our shows, through advertising, through proper international subscription channels, freeing up BBC Worldwide to be fully commercial, whatever it takes.

"Frankly, don't be icky and modest about making money, let's monetise the bezeesus Mary and Joseph out of our programmes abroad so that money can come back, take some pressure off the licence fee at home and be invested in even more ambitious quality shows, that can only add to our value."

Mr Whittingdale, who was interviewed by ITV News' Alastair Stewart at the festival, said he wanted an open debate about whether the corporation should do everything it has done in the past. He said he had a slight sense that people who rushed to defend the BBC were "trying to have an argument that's never been started".

"Whatever my view is, I don't determine what programmes the BBC should show," he added. "That's the job of the BBC." Mr Whittingdale said any speculation that the Conservative Party had always wanted to change the BBC due to issues such as its editorial line was "absolute nonsense".

Complete the summary below. Choose NO MORE THAN TWO WORDS from the text for each answer.

EASING THE STRAIN ON THE LICENCE FEES

Iannucci recommended increasing BBC's profit by pushing ourselves more **31** _____. He suggests being more aggressive in selling British shows, through advertising and proper international **32** _____. Also, he invokes producers to stop being **33** _____ and modest about making money and invest into even **34** _____ quality shows. However, Mr Whittingdale denied any **35** _____ that the Conservative Party had always wanted to change the BBC because of its editorial line.

PART 1

Questions 1–7

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

ELEPHANTS SENSE 'DANGER' CLOTHES

St Andrews University researchers discovered that elephants could recognise the degree of danger posed by various groups of individuals. The study found that African elephants always reacted with fear when they detected the smell of clothes previously worn by men of the Maasai tribe. They are known to demonstrate their courage by spearing **Q1**_____ The elephants also responded aggressively to red clothing, which defines traditional Maasai dress.

However, the elephants showed a much milder reaction to **Q2** _____ previously worn by the Kamba people, who do not hunt elephants and pose little threat.

The **Q3**_____ first presented elephants with clean, red clothing and with red clothing that had been worn for five days by either a Maasai or a **Q4**_____ man.

They revealed that Maasai-smelt clothing motivated elephants to travel significantly faster in the first minute after they moved away.

They then investigated whether elephants could also use the colour of clothing as a cue to classify a potential threat and found the elephants **Q5**_____ with aggression when they spotted red but not white cloth. This suggested that they associated the colour red with the Maasai.

The researchers believe the distinction in the elephants' emotional reaction to smell and **Q6**_____ might be explained by the amount of risk they sense. They might be able to distinguish among different human groups according to the level of risk they posed.

«We regard this experiment as just a start to investigating precisely how elephants 'see the world', and it may be that their abilities will turn out to equal or exceed those of our closer relatives, the monkeys and apes,» **Q7**_____ added.

PART 2

Questions 8–12

You work for a travel agent. On the page there are descriptions of eight holidays. Decide which holiday (letters A to H) would be the most suitable for each person described below (8–12).

8

Person 8

Kevin is a very busy investment banker who wants a week off work. He likes scenery and fresh air. He is very fit and he enjoys walking. For this holiday he wants to leave the beach and try something different.

9

Person 9

Sue is a student. She will go to university next year, and her parents want to give her a holiday as a present before she goes. Sue likes reading and dancing, and wants somewhere romantic and relaxing.

10

Person 10

Mrs Wallis wants to give her husband a holiday to celebrate his 60th birthday. Mr Wallis likes all sorts of sport, but because his heart is rather weak, he cannot do anything too energetic. Mrs Wallis would like to stay in a good hotel.

11

Person 11

Terry owns his own business. He has had a successful year, and he wants a holiday. He wants somewhere with very good food and accommodation, and he wants to enjoy himself without doing very much.

12

Person 12

The Hamble family are looking for something that will interest Mark aged 7 and Tammy, aged 13. They all like animals and sport. Mr and Mrs Hamble would also like something that lets them do some exploring on their own.

A) Golf in America: A golfing safari across the United States in just ten days. Try eight great courses from New England to California, with golf lessons as you go. Transport is provided between your 5 star hotels and golf courses.

B) Climbing in Switzerland: Whether you are experienced or just beginning, Hipeak have the mountaineering holiday for you. Choose one of our seven, ten or fourteen day packages, and you can enjoy wonderful alpine scenery while climbing at your particular level of ability. No mountaineering gear is needed – we supply it all.

C) Florida and Disney World: Every kid dreams of Disney World, and after mom and dad have seen it all, you can leave the children with one of our special guides, and try some scuba diving in the Florida Keys, and a shopping tour of Miami. Or you can see Florida for yourselves with our no-problem car-hire scheme.

D) Safari in Kenya: Try seven days in Wariwaro lodge in Kenya's Serengetti park. Coach tours through the savannah to see some of the world's most spectacular wildlife. Flights go every Sunday from Heathrow, London, and there is our special family option, with children getting a one-third discount.

E) Holiday in Majorca: Two wild weeks in Majorca. Yes, if you are aged between 18 and 31, this package holiday is for you. The fun starts at Manchester airport, and in Majorca the party moves from the beach to the disco to the swimming pool. It only stops when you can't party any more. If you want a challenge, try this!

F) Mediterranean cruise: The ancient Mediterranean in 16 days. Take a luxury cruise on the RMV Perikles to Herculaneum, Caesarea, Athens and Alexandria. Enjoy our on-board facilities, including restaurant, library, cinema and disco.

G) Caribbean Beach: You've been working too hard! Forget it all on a tropical beach. Ten days in a luxury hotel, right on the beach. You hardly have to move from your deckchair, except to enjoy our award-winning cookery. Beach cricket and barbeques are on offer for the more energetic.

H) Hiking in Katmandu: Try a Katmandu adventure. See the Himalayas for yourself in this two week hiking tour. You must be fit and an experienced hiker, as well as having your own boots. We supply tents, the guides and the holiday of a lifetime!

PART 3

Questions 13–19

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

I) Just in time
II) Just in case
III) Eventful life
IV) A curious case
V) Reduced Expectations
VI) Royal brother
VII) Royal ancestor
VIII) Double trouble

13. Paragraph A **14. Paragraph B** **15. Paragraph C**
16. Paragraph D **17. Paragraph E** **18. Paragraph F**
19. Paragraph G

A. I am a mother of identical, mirror-image boys — David and John. No one but me can tell them apart. I am constantly amazed at how close they are. Once when they were babies David was ill, but it was John who began crying wildly. I tried to calm John first since nothing was wrong with him. But he only cried louder. Finally I gave some medicine to David — who really was unwell. As soon as John sensed his brother felt better, he immediately settled to sleep.

B. The 12 year old was playing near the Platte River in North Bend, Nebraska. The river was high and as the boy stepped in, the current pushed his legs away. He floated off, spinning in the powerful current. At the last possible moment before the rapids, his yells were heard by his dog. It jumped in, reached the boy and towed him ashore. Another second and the boy would have been swept away to certain death.

C. Armgaard Karl Graves, referred to in press reports as 'the Glasgow Spy', was convicted in Scotland under the Official Secrets Act (1911) for spying on the British Navy. He spent years successfully creating an identity as an Australian doctor and in Scotland even conducted important clinical experiments. But he was eventually caught by a suspicious post office worker as he sent and received post under a variety of assumed names.

D. Zsa Zsa Gabor was born in Budapest on February 6th, 1917. Now in her 90s she has had a long and varied life. She was a beauty queen and singer before becoming a famous screen actress. She was married 8 times but only had one child with second husband, Conrad Hilton. Her last marriage to Frederic von Anhalt gave her the honorary title Prinzessin von Anhalt.

E. "Who do you think you are" is one of my favourite TV programs. Each episode researches the family history of a celebrity, back into the mists of time. In the UK there are good records of births, marriages and deaths going back hundreds of years. One of the best episodes was on Boris Johnson, the Mayor of London. He was thrilled when he discovered he was directly related to King George II.

F. Paris Hilton is a famous socialite, media personality, actress, model and singer. In 2007 her grandfather Barron Hilton pledged 97% of his estate — a value of more than 2 billion US dollars — to a charitable foundation. Many now believe that Paris and the other grandchildren have had their potential inheritance sharply reduced. Others have commented that this news was unlikely to change her future life style.

G. Andy always travels well equipped for any potential possibility. He has a sewing repair kit and a small medical kit with aspirin. These are, I suppose, perfectly sensible. But what about a ball of string, tape measure, masking tape, Swiss army penknife, disposable cutlery, disinfectant, dry bags and an inflatable back rest? Andy says you never know what might happen and it's always best to be prepared.

PART 4

Questions 20–28

Read the following text for questions 20–28.

HOW BACTERIA INVENTED GENE EDITING

1. This week the UK Human Fertilisation and Embryology Authority okayed a proposal to modify human embryos through gene editing. The research, which will be carried out at the Francis Crick Institute in London, should improve our understanding of human development. It will also undoubtedly attract controversy – particularly with claims that manipulating embryonic genes is a first step towards designer babies. Those concerns shouldn't be ignored. After all, gene editing of the kind that will soon be undertaken at the Francis Crick Institute doesn't occur naturally in humans or other animals.

2. It is, however, a lot more common in nature than you might think, and it's been going on for a surprisingly long time – revelations that have challenged what biologists thought they knew about the way evolution works. We're talking here about one particular gene editing technique called CRISPR-Cas, or just CRISPR. It's relatively fast, cheap and easy to edit genes with CRISPR – factors that explain why the technique has exploded in popularity in the last few years. But CRISPR wasn't dreamed up from scratch in a laboratory. This gene editing tool actually evolved in single-celled microbes.

3. CRISPR went unnoticed by biologists for decades. It was only at the tail end of the 1980s that researchers studying Escherichia coli noticed that there were some odd repetitive sequences at the end of one of the bacterial genes. Later, these sequences

would be named Clustered Regularly Interspaced Short Palindromic Repeats – CRISPRs. For several years the significance of these CRISPRs was a mystery, even when researchers noticed that they were always separated from one another by equally odd 'spacer' gene sequences.

4. Then, a little over a decade ago, scientists made an important discovery. Those 'spacer' sequences look odd because they aren't bacterial in origin. Many are actually snippets of DNA from viruses that are known to attack bacteria. In 2005, three research groups independently reached the same conclusion: CRISPR and its associated genetic sequences were acting as a bacterial immune system. In simple terms, this is how it works. A bacterial cell generates special proteins from genes associated with the CRISPR repeats (these are called CRISPR associated – Cas – proteins). If a virus invades the cell, these Cas proteins bind to the viral DNA and help cut out a chunk. Then, that chunk of viral DNA gets carried back to the bacterial cell's genome where it is inserted – becoming a spacer. From now on, the bacterial cell can use the spacer to recognise that particular virus and attack it more effectively.

5. These findings were a revelation. Geneticists quickly realised that the CRISPR system effectively involves microbes deliberately editing their own genomes – suggesting the system could form the basis of a brand new type of genetic engineering technology. They worked out the mechanics of the CRISPR system and got it working in their lab experiments. It was a breakthrough that paved the way for this week's announcement by the HFEA. Exactly who took the key steps to turn CRISPR into a useful genetic tool is, however, the subject of a huge controversy. Perhaps that's inevitable – credit for developing CRISPR gene editing will probably guarantee both scientific fame and financial wealth.

6. Beyond these very important practical applications, though, there's another CRISPR story. It's the account of how the discovery of CRISPR has influenced evolutionary biology. Sometimes overlooked is the fact that it wasn't just geneticists who were excited by CRISPR's discovery – so too were biologists. They realised CRISPR was evidence of a completely unexpected parallel between the way humans and bacteria fight infections. We've known for a long time that part of our immune system *"learns"* about the pathogens it has seen before so it can adapt and fight infections better in future. Vertebrate animals were thought to be the only organisms with such a sophisticated adaptive immune system. In light of the discovery of CRISPR, it seemed some bacteria had their own version. In fact, it turned out that lots of bacteria have their own version. At the last count, the CRISPR adaptive immune system was estimated to be present in about 40% of bacteria. Among the other major group of single-celled microbes – the archaea – CRISPR is even more common. It's seen in about 90% of them. If it's that common today, CRISPR must have a history stretching back over millions – possibly even billions – of years. "It's clearly been around for a while," says Darren Griffin at the University of Kent.

7. The animal adaptive immune system, then, isn't nearly as unique as we thought. And there's one feature of CRISPR that makes it arguably even better than our adaptive immune system: CRISPR is heritable. When we are infected by a pathogen, our adaptive immune system learns from the experience, making our next encounter with that pathogen less of an ordeal. This is why vaccination is so effective: it involves priming us with a weakened version of a pathogen to train our adaptive immune system. Your children, though, won't benefit from the wealth of experience locked away in your adaptive immune system. They have to experience an infection – or be vaccinated – first hand before they can learn to deal with a given pathogen.

Do the following statements agree with the given information? Write TRUE if the statement agrees with the information, FALSE if the statement contradicts the information, NOT GIVEN if there is no information on this.

20 **The research carried out at the Francis Crick Institute in London is likely to be controversial.**
A) True
B) False
C) Not Given

21 **Gene editing, like the one in the upcoming research, can happen naturally in humans or other animals.**
A) True
B) False
C) Not Given

22 **CRISPR-Cas is a gene editing technique.**
A) True
B) False
C) Not Given

23 **CRISPR was noticed when the researchers saw some odd repetitive sequences at the ends of all bacterial genes.**
A) True
B) False
C) Not Given

24 **A group of American researchers made an important revelation about the CRISPR.**
A) True
B) False
C) Not Given

Choose the correct letter, A, B, C or D. Write the correct letter in boxes 25–28 on your answer sheet.

25 **'Spacer' sequences look odd because:**
A) they are a bacterial immune system
B) they are DNA from viruses
C) they aren't bacterial in origin
D) all of the above

26 **The ones, who were excited about the CRISPR's discovery, were:**
A) biologists
B) geneticists
C) physicists
D) A and B

27 **Word "*learns*" in the 6th paragraph means:**
A) determines
B) gains awareness
C) adapts
D) studies

28 **What makes CRISPR better than even our adaptive immune system?**

A) long history of existence
B) immortality
C) heritability
D) adaptiveness

PART 5 Questions 29–35

Read the text below and answer Questions 29–35.

PENGUINS' ANTI-ICE TRICK REVEALED

"What we learn here is how penguins combine oil and nano-structures on the feathers to produce this effect to perfection," explains Kavehpour. By analysing feathers from different penguin species, the researchers discovered Antarctic species the gentoo penguin (Pygoscelis papua) was more superhydrophobic compared with a species found in warmer climes – the Magellanic penguin (Spheniscus magellanicus) – whose breeding sites include Argentinian desert.

Gentoo penguins' feathers contained tiny pores which trapped air, making the surface hydrophobic. And they were smothered with a special preening oil, produced by a gland near the base of the tail, with which the birds cover themselves. Together, these properties mean that in the wild, droplets of water on Antarctic penguins' superhydrophobic feathers bead up on the surface like spheres – formations that, according to the team, could provide geometry that delays ice formation, since heat cannot easily flow out of the water if the droplet only has minimal contact with the surface of the feather.

"The shape of the droplet on the surface dictates the delay in freezing," explains Kavehpour. The water droplets roll off the penguin's feathers before they have time to freeze, the researchers propose. Penguins living in the Antarctic are highly evolved to cope with harsh conditions: their short outer feathers overlap to make a thick protective layer over fluffier feathers which keep them warm. Under their skin, a thick layer of fat keeps them insulated. The flightless birds spend a lot of time in the sea and are extremely agile and graceful swimmers, appearing much more awkward on land.

Kavehpour was inspired to study Antarctic penguins' feathers after watching the birds in a nature documentary: "I saw these birds moving in and out of water, splashing everywhere. Yet there is no single drop of frozen ice sticking to them," he tells BBC Earth. His team now hopes its work could aid design of better man-made surfaces which minimise frost formation.

"I would love to see biomimicking of these surfaces for important applications, for example, de-icing of aircrafts," says Kavehpour. Currently, airlines spend a lot of time and money using chemical de-icers on aeroplanes, as ice can alter the vehicles' aerodynamic properties and can even cause them to crash.

Complete the sentences below. Write ONLY ONE WORD from the passage for each answer.

QUESTIONS 29–35: SENTENCE COMPLETION

Formations like **29** _____ could provide geometry that delays ice formation.

The delay in freezing is dictated by the **30** _____ of the droplet.

Penguins in Antarctic are highly evolved to be able to cope with **31** _____ conditions.

Penguins are insulated by a **32** _____ layer of fat.

On the land, penguins appear much more **33** _____ than in the sea.

The inspiration came to Kavehpour after watching a **34** _____ about penguins.

Kavehpour would like to see **35** _____ surfaces which minimise frost formation.

PART 1

Questions 1–9

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

SCOTLAND YARD

Scotland Yard is the headquarters of the Metropolitan Police in London. To most people, its name immediately brings to mind the picture of a detective — cool, efficient, ready to track down any criminal, or a helmeted **Q1**_____ constable — that familiar figure of the London scene and trusty helper of every traveller from overseas.

Scotland Yard is situated on the Thames Embankment close to the Houses of Parliament and the familiar clock tower of Big Ben, and its jurisdiction extends over 740 square miles with the exception of the ancient City of **Q2**_____, which possesses its own separate police force.

One of the most successful developments in Scotland Yard's crime detection and emergency service has been the "999 system". On receipt of a call the 999 Room operator ascertains by electronic device the position of the nearest available police car, which is contacted by radio. Almost instantly a message is also sent by teleprinter to the police station concerned so that within seconds of a **Q3**_____ for assistance being received, a police **Q4**_____ is on its way to the scene. An old-established section of the **Q5**_____ police is the Mounted Branch, with its strength of about 200 horses stabled at strategic points. These **Q6**_____ are particularly suited to ceremonial occasions, for they are accustomed to military bands.

An interesting branch of Scotland Yard is the **Q7**_____ of Police Dogs, first used as an experiment in 1939. Now these **Q8**_____ are an important part of the Force. One dog, for example, can search a warehouse in ten minutes, whereas the same search would take six men an hour.

There is also the River Police, or Thames Division, which deals with all **Q9**_____s occurring within its river boundaries.

There are two other departments of Scotland Yard – the Witness Room (known as the Rogues' Gallery) where a photographic record of known and suspected criminals is kept, and the Museum, which contains murder relics and forgery exhibits.

PART 2

Questions 10–14

The people below in 10–14 all want to visit a museum. Look at the descriptions of eight museums (A–H). Decide which museum would be most suitable for each person.

10

Person 10

Cristina would like to visit a museum and see people making things. She wants to buy some souvenirs to take home.

11

Person 11

John is studying Art History and is particularly interested in the old masters from Holland and their paintings. He has only time on Sundays.

12

Person 12

Alan is a teacher and wants to spend a day looking at scientific discoveries and modern inventions. His 8-year-old daughter will probably go with him.

13

Person 13

Sandra would like to visit a museum, which has exhibitions of ceramics from the past. She wants to have lunch there as well.

14

Person 14

Stephen is a student and wants to combine a visit to a museum with a walk in the open air. He would also like to attend a practical demonstration there.

A) The Open Air Museum: The Open Air Museum is one of the oldest and largest in the world. Spread across 54 acres of land, the museum houses more than 40 farms, houses, and mills from the period between 1740-1950. The museum offers presentations on a daily basis nearly all year long.

B) The Museum of Crafts: The mission of the Museum of Crafts is to enhance the appreciation and understanding of England's past by presenting the culture, history, and lives of ordinary people through demonstration and exhibition and of the trades and crafts. The museum shop offers an excellent range of fun and educational gift items.

C) Museum of Fine Arts: Organised by the MFA, this splendid exhibition proposes a new approach to understanding 18th-century Dutch painting. It includes 35 carefully selected, beautifully preserved portraits, landscapes, genre scenes, and seascapes borrowed from European private and public collections. The museum is open daily except for Sundays.

D) The Museum of Technology: At MOT, the Museum of Technology, people of all ages can see and do amazing things every day. Ride in the only hydrogen car open to the public, witness what's next in 3D Printing the Future. There are child-friendly options available, and families are always welcome.

E) Museum of Arts and Design (MAD): The outstanding exhibition, Dutch Painting in the Age of Rembrandt, will be on view at the Museum of Arts and Design (MAD) until October 26. Anyone should make an effort to see this display of beautiful 17th-century art. The exhibition is open seven days a week.

F) The National Railway Museum: Based on the site of the biggest passenger railway station in the world, the National Railway Museum truly is a museum for everybody. Kids, small and big, will be fascinated by the exhibitions, while the enormous collection of historic working machinery and vintage vehicles is fascinating.

G) Middleport Pottery: Travel back in time and discover the history of Dutch pottery, including a fabulous collection of "Gouda plateel." The top pieces of it are being exhibited in room 28. See items from Gouda on display and visit the museum shop and café.

H) The Kroneberg Porcelain Museum: The Kroneberg Porcelain Museum exhibits examples of the well-known porcelain factory's production from 1867-1983. You will find unique artwork from different periods and countless examples of household china. Our cafe is temporarily closed due to a gas leak.

PART 3

Questions 15–21

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

i) How can reflection problems be avoided?
ii) How long should I work without a break?
iii) What if I experience any problems?
iv) When is the best time to do filing chores?
v) What makes a good seat?
vi) What are the common health problems?
vii) What is the best kind of lighting to have?
viii) What are the roles of management and workers?
ix) Why does a VDU create eye fatigue?
x) Where should I place the documents?

15. Paragraph A **16. Paragraph B** **17. Paragraph C**
18. Paragraph D **19. Paragraph E** **20. Paragraph F**
21. Paragraph G

BENEFICIAL WORK PRACTICES FOR THE KEYBOARD OPERATOR

A. Sensible work practices are an important factor in the prevention of muscular fatigue; discomfort or pain in the arms, neck, hands or back; or eye strain which can be associated with constant or regular work at a keyboard and visual display unit (VDU).

B. It is vital that the employer pays attention to the physical setting such as workplace design, the office environment, and placement of monitors as well as the organisation of the work and individual work habits. Operators must be able to recognise work-related health problems and be given the opportunity to participate in the management of these. Operators should take note of and follow the preventive measures outlined below.

C. The typist must be comfortably accommodated in a chair that is adjustable for height with a back rest that is also easily adjustable both for angle and height. The back rest and sitting ledge (with a curved edge) should preferably be cloth-covered to avoid excessive perspiration.

D. When the keyboard operator is working from a paper file or manuscript, it should be at the same distance from the eyes as the screen. The most convenient position can be found by using some sort of holder. Individual arrangement will vary according to whether the operator spends more time looking at the VDU or the paper – whichever the eyes are focused on for the majority of time should be put directly in front of the operator.

E. While keying, it is advisable to have frequent but short pauses of around thirty to sixty seconds to proofread. When doing this, relax your hands. After you have been keying for sixty minutes, you should have a ten minute change of activity. During this spell it is important that you do not remain seated but stand up or walk around. This period could be profitably used to do filing or collect and deliver documents.

F. Generally, the best position for a VDU is at right angles to the window. If this is not possible then glare from the window can be controlled by blinds, curtains or movable screens. Keep the face of the VDU vertical to avoid glare from overhead lighting.

G. Unsatisfactory work practices or working conditions may result in aches or pain. Symptoms should be reported to your supervisor early on so that the cause of the trouble can be corrected and the operator should seek medical attention.

PART 4

Questions 22–30

Read the following text for questions 22–30.

THE POTENTIAL TO SNIFF OUT DISEASE

The fact diseases have a smell comes as no surprise – but finding someone or something that can detect them at an early stage could hold huge potential for medicine.

Breath, bodily odours and urine are all amazingly revealing about general health. Even the humble cold can give off an odour, thanks to the thick bacteria-ridden mucus that ends up in the back of the throat. The signs are not apparent to everyone – but some super-smellers are very sensitive to the odours. Joy Milne, for example, noticed her husband's smell had changed shortly before he was diagnosed with Parkinson's disease.

Humans can detect nearly 10,000 different smells. Formed by chemicals in the air, they are absorbed by little hairs, made of extremely sensitive nerve fibres, hanging from the nose's olfactory receptors. And the human sense of smell is 10,000 times more sensitive than the sense of taste. But dogs, as the old joke might have had it, smell even better.

Their ability to detect four times as many odours as humans makes them a potential early warning system for a range of diseases. Research suggesting dogs could sniff out cancers, for example, was first published about 10 years ago. And there have been many tales of dogs repeatedly sniffing an area of their owner's body, only for it to turn out to be hiding a tumour.

What they are smelling are the "volatile molecules" given off by cells when they become cancerous. Some studies suggest dogs can be 93% accurate. Others suggest they can detect very small tumours before clinical tests can. And yet more studies have produced mixed results.

Does cancer smell?

At Milton Keynes University Hospital, a small team has recently begun to collect human urine samples to test dogs' ability to detect the smell of prostate cancer. The patients had symptoms such as difficulty urinating or a change in flow, which could turn out to be prostate, bladder or liver cancer.

Rowena Fletcher, head of research and development at the hospital, says the role of the dogs – which have been trained by Medical Detection Dogs – is to pick out samples that smell of cancer. Further down the line, a clinical test will show if the dogs' diagnosis is correct. She says the potential for using dogs in this way is far-reaching – even if it is not practical to have a dog in every surgery.

"We hope one day that there could be an electronic machine on every GP's desk which could test a urine sample for diseases by smelling it," she says. "But first we need to pick up the pattern of what the dogs are smelling."

And that's the key. Dogs can't tell us what their noses are detecting, but scientists believe that different cancers could produce different smells, although some might also be very similar.

Electronic noses

Lab tests to understand what these highly-trained dogs are smelling could then inform the development of 'electronic noses' to detect the same molecules. These might then give rise to better diagnostic tests in the future. The potential for using smell to test for a wide range of diseases is huge, Ms Fletcher says.

Bacteria, cancers and chronic diseases could all have their own odour – which may be imperceptible to only the most sensitive humans, but obvious to dogs. It may be possible in the future to use disease odours as the basis for a national screening programme or to test everybody at risk of a certain cancer in a particular age group.

However, there are fewer than 20 dogs in the UK trained to detect cancer at present. Training more will take more funding and time. On the positive side, all dogs are eligible to be trained provided they are keen on searching and hunting. Whatever their breed or size, it's our four-legged friend's astounding sense of smell which could unlock a whole new way of detecting human diseases.

Do the following statements agree with the information in the reading text? Write TRUE if the statement agrees with the information, FALSE if the statement contradicts the information, NOT GIVEN if there is no information on this.

22 **You can have a specific smell even due to simple cold.**
A) True
B) False
C) Not Given

23 **Human sense of taste is 10,000 less sensitive than human sense of smell.**
A) True
B) False
C) Not Given

24 **Dogs and cats can sniff out different diseases.**
A) True
B) False
C) Not Given

25 **Doctors believe that different cancers might have the same specific smell.**
A) True
B) False
C) Not Given

26 **There are more than 20 dogs in the UK trained to detect cancer.**
A) True
B) False
C) Not Given

Choose the correct letter, A, B, C or D. Write the correct letter in boxes 27–30 on your answer sheet.

27 **All the studies suggest that dogs:**
A) Can be 93% accurate
B) Can detect very small tumours
C) Can't detect tumours at all
D) Different studies have shown different results

28 **What scientists give dogs to detect cancer?**
A) Urine samples
B) Bacterias
C) Different odours
D) Nothing

29 **What's an electronic nose?**
A) A specific tool for dogs
B) A gadget to diagnose diseases
C) A recovery tool for ill patients
D) An artificial nose

30 **The main objective of this passage is to:**
A) Bring awareness to the cancer problem
B) Show us how good dogs are at detecting cancer
C) Show us how important it can be to be able to diagnose a disease by an odour
D) Tell us about new technologies

PART 5 Questions 31–35

Read the text below and answer Questions 31–35.

TRASH TALK — SORTING THROUGH A MOUNTAIN OF POTTERY TO TRACK THE ROMAN OIL TRADE

A. In the middle of Rome's trendiest neighborhood, surrounded by sushi restaurants and nightclubs with names like Rodeo Steakhouse and Love Story, sits the ancient world's biggest garbage dump—a 150-foot-tall mountain of discarded Roman amphoras, the shipping drums of the ancient world. It takes about 20 minutes to walk around Monte Testaccio, from the Latin *testa* and Italian *cocci*, both meaning "potsherd." But despite its size—almost a mile in circumference—it's easy to walk by and not really notice unless you are headed for some excellent pizza at Velavevodetto, a restaurant literally stuck into the mountain's side. Most local residents don't know what's underneath the grass, dust, and scattering of trees. Monte Testaccio looks like a big hill, and in Rome people are accustomed to hills.

B. Monte Testaccio stands near the Tiber River in what was ancient Rome's commercial district. Many types of imported foodstuffs, including oil, were brought into the city and then stored for later distribution in the large warehouses that lined the river. So, professor, just how many amphoras are there?" I

ask José Remesal of the University of Barcelona, co-director of the Monte Testaccio excavations. It's the same question that must occur to everyone who visits the site when they realize that the crunching sounds their footfalls make are not from walking on fallen leaves, but on pieces of amphoras. (Don't worry, even the small pieces are very sturdy.) Remesal replies in his deep baritone, "Something like 25 million complete ones. Of course, it's difficult to be exact," he adds with a typical Mediterranean shrug. I, for one, find it hard to believe that the whole mountain is made of amphoras without any soil or rubble. Seeing the incredulous look on my face as I peer down into a 10-foot-deep trench, Remesal says, "Yes, it's really only amphoras." I can't imagine another site in the world where archaeologists find so much—about a ton of pottery every day. On most Mediterranean excavations, pottery washing is an activity reserved for blisteringly hot afternoons when digging is impossible. Here, it is the only activity for most of Remesal's team, an international group of specialists and students from Spain and the United States. During each year's two-week field season, they wash and sort thousands of amphoras handles, bodies, shoulders, necks, and tops, counting and cataloguing, and always looking for stamped names, painted names, and numbers that tell each amphora's story.

C. Although scholars worked at Monte Testaccio beginning in the late 19th century, it's only within the past 30 years that they have embraced the role amphoras can play in understanding the nature of the Roman imperial economy. According to Remesal, the main challenge archaeologists and economic historians face is the lack of "serial documentation," that is, documents for consecutive years that reflect a true chronology. This is what makes Monte Testaccio a unique record of Roman commerce and provides a vast amount of datable evidence in a clear and unambiguous sequence. "There's no other place where you can study economic history, food production and distribution, and how the state controlled the transport of a product," Remesal says. "It's really remarkable."

Complete the sentences below. Write NO MORE THAN THREE WORDS from the passage for each answer.

QUESTIONS 31–35: SENTENCE COMPLETION

It is unknown for **31** _____ what's underneath the grass, dust, and scattering of trees.

Monte Testaccio stands near the ancient Rome's **32** _____.

Remesal doesn't believe that the whole mountain is made of **33** _____ without any soil or rubble.

Remesal's team washes and sorts thousands of amphoras each year's two-week **34** _____.

35 _____ started working at Monte Testaccio in the late 19th century.

PART 1

Questions 1–8

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

FIRE CREWS HUNT ESCAPED HAMSTER

Eight firefighters have been called in to help find an escaped hamster. Two crews used a chocolate-covered camera and a vacuum cleaner to try and locate the missing **Q1**_____, called Fudgie, at the home of a six-year-old girl in Dunbar, Scotland.

The girl's mother said: 'We came down for breakfast and discovered Fudgie had opened the top lid of her cage and had made her way into the kitchen and we think she has gone through a small hole in the floor.'

The fire crews spent five hours trying to recover the pet after it ran down a hole in the kitchen floor. But, the hamster still refused to come out of the **Q2**_____.

In the search for **Q3**_____, the firefighters took the family cooker and gas pipes apart. They also dropped a mini-camera coated with chocolate under the floorboards. They then hoped to take out the hamster using a vacuum cleaner. Despite all their efforts, they failed to find Fudgie.

In the end, the **Q4**_____ put another camera down the hole and left it under the floorboards, connected to the screen of the family home computer, to see if Fudgie appeared. Besides, the **Q5**_____ and her parents regularly dropped food through the **Q6**_____ for the **Q7** _____

At last, after eight days the hamster returned to her cage safe and sound. She crawled from the hole in the kitchen floor early in the morning. It was the girl's father who first found Fudgie and locked the runaway hamster.

The girl said that day it was like Christmas morning for her. Her parents added that they too felt extremely happy when Fudgie had finally **Q8**_____.

PART 2

Questions 9–15

Read the descriptions of ten places. Decide which place would be the most suitable for you. For Questions 9–15, select the best place.

9

Person 9

You are interested in classical music and want to talk to professional musicians about their work. You'd like to find out more about classical instruments, and actually play some music.

10

Person 10

You want to learn to play some of your favourite band's songs, and to know how your favourite singers create their own special sound. You'd like to try out some different instruments.

11

Person 11

You love watching spectacular concerts with fantastic dancers, and want to feel some of the atmosphere of a big musical event. You'd like to see performances by famous people you have heard about.

12

Person 12

You like exploring the personal backgrounds of your favourite bands, and also the stories behind their well-known songs. You have your own band, and want some advice about performing live on stage.

13

Person 13

You like listening to all sorts of pop music, and want a fun way to learn various dance styles. You'd like to bring something home to show your friends what you have learnt during your visit.

14

Person 14

You want to go to a show that's a bit frightening. You'd like to see a story set in the past and realistic costumes from the period.

15

Person 15

You want a show with dancing, as well as songs by well-known musicians. You'd like the music to be in a range of styles from around the world.

A) The Core: This is the place for musical history. You'll learn where your favourite singers and musicians grew up and discover the processes involved in writing famous songs and producing the videos. Find out about their journey to fame, and get some tips on what makes a good concert! There's all you ever wanted to know about famous musicians.

B) Rhythm-Studio: Get your body moving in the studio and learn to move to rhythms and sounds from the past to now, including Soul and Disco. Learn your steps from our professional onscreen dance instructor, then watch your performance and become the star in your own video recording which you can take away.

C) Mary Wright: The two well-known lead actors in this 16th-century drama are surprisingly good dancers, and the music creates quite a scary atmosphere. The clothes by top designer Jean Luc Filbert are historically accurate and look absolutely wonderful.

D) Universe of Sound: Create your own musical experience – record yourself making music with a huge orchestra as they play on the video background screen – you can even download it to disc to take home! You can also learn about violins, flutes, trumpets and many more with our computer demonstrations, and meet real musicians who are present every day.

E) ArchivedImages: Want to find out about a new band, or just want more information about an old favourite? Visit our collection to find out facts and figures, or see the actual possessions of famous bands and musicians you are interested in. You can actually get to touch things worn on stage at major rock and pop events, and there are plenty of other concert souvenirs.

F) Finale: Imagine being in the crowd for amazing performances from the past. Enjoy 3D life-size videos from the stars of yesterday and today. You can experience the excitement of a massive rock stadium, and the sounds, movement and rhythms that created some of the most exciting music ever known.

G) Rave-on!: How about learning new skills on the guitar, drums and keyboard by video? Follow the touch-screen instructions to find lessons on each instrument, or search for a song to practise playing along to. Try our Professional Selection, with video clips of band members who will explain the techniques that make their recordings so individual.

H) Show-in-a-day!: Be a star singer or dancer for the day in a one-time-only special performance! Experts in international music and dance styles will train you, and costumes provided for the performance help create a really special, individual show. Get your friends and family to come and see you perform, as no videoing or photography is allowed.

I) WorldScene: For one month only, experience the amazing sights and sounds of the WorldScene band, a large international group of traditional musicians and dancers. You'll experience music and dance styles never heard or seen before in this country. Book a ticket to meet the musicians, talk about their experiences and get some new ideas!

J) Keeping Time: Keeping Time is based on the real-life story of the popular group Marcellous, and includes their best work. We see how having members from three different continents allowed them to create songs using music from each place. Unusually, there's ballet in this show, but it goes surprisingly well with their music.

PART 3

Questions 16–21

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

I) The House of Commons
II) Parliamentary Procedure
III) The House of Lords
IV) Westminster
V) The System of Government
VI) Parliamentary Committees
VII) Whitehall
VIII) The Crown

16. Paragraph A **17. Paragraph B** **18. Paragraph C**
19. Paragraph D **20. Paragraph E** **21. Paragraph F**

A. Her Majesty's Government, in spite of its name, derives its authority and power from its party representation in Parliament. Parliament is housed in the Palace of Westminster, once a home of the monarchy. Like the monarchy, Parliament is an ancient institution, dating from the middle of the thirteenth century. Parliament is the seat of British democracy, but it is perhaps valuable to remember that while the House of Lords was created in order to provide a council of the nobility for the king, the Commons were summoned originally in order to provide the king with money.

B. The reigning monarch is not only head of state but symbol of the unity of the nation. The monarchy is Britain's oldest secular institution, its continuity for over a thousand years broken only once by a republic that lasted a mere eleven years (1649-60). The monarchy is hereditary, the succession passing automatically to the oldest male child, or in the absence of males to the oldest female offspring of the monarch. In law the monarch is head of the executive and of the judiciary, head of the Church of England, and commander-in-chief of the armed forces.

C. The dynamic power of Parliament lies in its lower chamber. Of its 650 members, 523 represent constituencies in England, 38 in Wales, 72 in Scotland and 17 in Northern Ireland. There are only seats in the Commons debating chamber for 370 members, but except on matters of great interest, it is unusual for all members to be present at any one time. Many MPs find themselves in other rooms of the Commons, participating in a variety of committees and meetings necessary for an effective parliamentary process.

D. Britain is a democracy, yet its people are not, as one might expect in a democracy, constitutionally in control of the state. The constitutional situation is an apparently contradictory one. As a result of a historical process the people of Britain are subjects of the Crown, accepting the Queen as the head of the state. Yet even the Queen is not sovereign in any substantial sense since she receives her authority from Parliament, and is subject to its direction in almost all matters. This curious situation came about as a result of a long struggle for power between the Crown and Parliament during the sixteenth and the seventeenth centuries.

E. Her Majesty's Government governs in the name of the Queen, and its hub, Downing Street, lies in Whitehall, a short walk from Parliament. Following a general election, the Queen invites the leader of the majority party represented in the Commons, to form a government on her behalf. Government ministers are invariably members of the House of Commons, but infrequently members of the House of Lords are appointed. All government members continue to represent "constituencies" which elected them.

F. Each parliamentary session begins with the "State Opening of Parliament", a ceremonial occasion in which the Queen proceeds from Buckingham Palace to the Palace of Westminster where she delivers the Queen's Speech from her throne in the House of Lords. Her speech is drafted by her government, and describes what the government intends to implement during the forthcoming session. Leading members of the Commons may hear the speech from the far end of the chamber, but are not allowed to enter the House of Lords.

PART 4 Questions 22–29

Read the following text for questions 22–29.

THE SECRETS OF PERSUASION

Our mother may have told you the secret to getting what you ask for was to say please. The reality is rather more surprising. Adam Dudding talks to a psychologist who has made a life's work from the science of persuasion. Some scientists peer at things through high-powered microscopes. Others goad rats through mazes or mix bubbling fluids in glass beakers. Robert Cialdini, for his part, does curious things with towels and believes that by doing so he is discovering important insights into how society works.

Cialdini's towel experiments (more of them later), are part of his research into how we persuade others to say yes. He wants to know why some people have a knack for bending the will of others, be it a telephone cold-caller talking to you about timeshares, or a parent whose children are compliant even without threats of extreme violence. While he's anxious not to be seen as the man who's written the bible for snake-oil salesmen, for decades the Arizona State University social psychology professor has been creating systems for the principles and methods of persuasion and writing bestsellers about them. Some people seem to be born with the skills; Cialdini's claim is that by applying a little science, even those of us who aren't should be able to get our own way more often. "All my life I've been an easy mark for the blandishment of salespeople and fundraisers and I'd always wondered why they could get me to buy things I didn't want and give to causes I hadn't heard of," says Cialdini on the phone from London, where his is plugging his latest book.

He found that laboratory experiments on the psychology of persuasion were telling only part of the story, so he began to research influence in the real world, enrolling in sales-training programmes: "I learnt how to sell automobiles from a lot, how to sell insurance from an office, how to sell encyclopedias door to door." He concluded there were six general "principles of influence" and has since put them to the test under slightly more scientific conditions. Most recently, that has meant messing about with towels. Many hotels leave a little card in each bathroom asking guests to reuse towels and thus conserve water and electricity and reduce pollution. Cialdini and his colleagues wanted to test the relative effectiveness of different words on those cards. Would guests be motivated to co-operate simply because it would help save the planet, or were other factors more compelling? To test this, the researchers changed the card's message from an environmental one to the simple (and truthful) statement that the majority of guests at the hotel had reused their towel at least once. Guests given this message were 26% more likely to reuse their towels than those given the old message. In Cialdini's book "Yes! 50 Secrets from the Science of Persuasion", co-written with another social scientist and a business consultant, he explains that guests were responding to the persuasive force of "social proof", the idea that our decisions are strongly influenced by what we believe other people like us are doing.

So much for towels. Cialdini has also learnt a lot from confectionery. Yes! Cites the work of New Jersey behavioural scientist David Strohmetz, who wanted to see how restaurant patrons would respond to ridiculously small favour from their food server, in the form of after-dinner chocolate for each diner. The secret, it seems, is in how you give the chocolate. When the chocolates arrived in a heap with the bill, tips went up a miserly 3% compared to when no chocolate was given. But when the chocolates were dropped individually in front of each diner, tips went up 14%. The scientific breakthrough, though, came when the waitress gave each diner one chocolate, headed away from the table then doubled back to give them one more each as if such generosity had only just occurred to her. Tips went up 23%. This is "reciprocity" in action: we want to return favours done to us, often without bothering to calculate the relative value of what is being received and given.

Geeling Ng, operations manager at Auckland's Soul Bar, says she's never heard of Kiwi waiting staff using such a cynical trick, not least because New Zealand tipping culture is so different from that of the US: "If you did that in New Zealand, as diners were leaving they'd say 'can we have some more?'" But she certainly understands the general principle of reciprocity. The way to a diner's heart is "to give them something they're not expecting in the way of service. It might be something as small as leaving a mint on their plate, or it might be remembering that last time they were in they wanted their water with no ice and no lemon. "In America, it would translate into an instant tip. In New Zealand, it translates into a huge smile and thanks to you." And no doubt, return visits.

Choose the correct letter, A, B, C or D.

22 The main purpose of Cialdini's research of writing is to

A) explain the reason why researcher should investigate in person
B) explore the secret that why some people become the famous salesperson
C) help people to sale products
D) prove maybe there is a science in the psychology of persuasion

23 Which of the statement is CORRECT according to Cialdini's research methodology

A) he checked data in a lot of latest books
B) he conducted this experiment in the laboratory
C) he interviewed and contract with many salespeople
D) he made lot phone calls collecting what he wants to know

24 **Which of the following is CORRECT according to towel experiment in the passage?**

A) Different hotel guests act in a different response
B) Most guests act by the idea of environment preservation
C) more customers tend to cooperate as the message requires than simply act environmentally
D) people tend to follow the hotel's original message more

25 **Which of the following is CORRECT according to the candy shop experiment in the passage?**

A) Presenting way affects diner's tips
B) Regular customer gives tips more than irregulars
C) People give tips only when offered chocolate
D) Chocolate with bill got higher tips

Do the following statements agree with the information given in the reading passage? Write TRUE if the statement agrees with the information, FALSE if the statement contradicts the information, NOT GIVEN if there is no information on this.

26 **Robert Cialdini experienced "principles of influence" himself in realistic life.**

A) True
B) False
C) Not Given

27 **Principle of persuasion has different types in different countries.**

A) True
B) False
C) Not Given

28 **In New Zealand, people tend to give tips to attendants after being served chocolate.**

A) True
B) False
C) Not Given

29 **Elder generation of New Zealand is easily attracted by extra service of restaurants by the principle of reciprocity.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the text below and answer Questions 30–35.

ARCHITECTURE IN BRITAIN

From the Middle Ages to the 20th century, what are the influences and movements that have shaped the changing face of British architecture?

Romano-British culture—and that included architecture along with language, religion, political organisation and the arts—survived long after the Roman withdrawal. And although the Anglo-Saxons had a sophisticated building style of their own, little survives to bear witness to their achievements as the vast majority of Anglo-Saxon buildings were made of wood.

Even so, the period between the Norman landing at Pevensey in 1066 and the day in 1485 when Richard III lost his horse and his head at Bosworth, ushering in the Tudors and the Early Modern period, marks a rare flowering of British buildings. And it is all the more remarkable because the underlying ethos of medieval architecture was "fitness for purpose". The great cathedrals and parish churches that lifted up their towers to heaven were not only acts of devotion in stone; they were also fiercely functional buildings. Castles served their particular purpose and their battlements and turrets were for use rather than ornament. The rambling manor houses of the later Middle Ages, however, were primarily homes, their owners achieving respect and maintaining status by their hospitality and good lordship rather than the grandeur of their buildings. In a sense, the buildings of the 16th century were also governed by fitness for purpose—only now, the purpose was very different. In domestic architecture, in particular, buildings were used to display status and wealth.

This stately and curious workmanship showed itself in various ways. A greater sense of security led to more outward-looking buildings, as opposed to the medieval arrangement where the need for defence created houses that faced inward onto a courtyard or series of courtyards. This allowed for much more in the way of exterior ornament. The rooms themselves tended to be bigger and lighter—as an expensive commodity, the use of great expanses of glass was in itself a statement of wealth. There was also a general move towards balanced and symmetrical exteriors with central entrances. With the exception of Indigo Jones (1573-1652), whose confident handling of classical detail and proportion set him apart from all other architects of the period, most early 17th century buildings tended to take the innocent exuberance of late Tudor work one step further. But during the 1640s and 50s the Civil War and its aftermath sent many gentlemen and nobles to the Continent either to escape the fighting or, when the war was lost, to follow Charles II into exile. There they came into contact with French, Dutch and Italian architecture and, with Charles's restoration in 1660, there was a flurry of building activity as royalists reclaimed their property and built themselves houses reflecting the latest European trends. The British Baroque was a reassertion of authority, an expression of absolutist ideology by men who remembered a world turned upside down during the Civil War. The style is heavy and rich, sometimes overblown and melodramatic. The politics which underpin it are questionable, but its products are breathtaking.

The huge glass-and-iron Crystal Palace, designed by Joseph Paxton to house the Great Exhibition of 1851, shows another strand to 19th century architecture—one which embraced new industrial processes. But it wasn't long before even this confidence in progress came to be regarded with suspicion. Mass production resulted in buildings and furnishings that were too perfect, as the individual craftsman no longer had a major role in their creation. Railing against the dehumanising effects of industrialisation, reformers like John Ruskin and William Morris made a concerted effort to return to hand-crafted, pre-industrial manufacturing techniques. Morris's influence grew from the production of furniture and textiles, until by the 1880s a generation of principled young architects was following his call for good, honest construction.

The most important trends in early 20th century architecture simply passed Britain by. Whilst Gropius was working on cold, hard expanses of glass, and Le Corbusier was experimenting with the use of reinforced concrete frames, we had staid establishment architects like Edwin Lutyens producing Neo-Georgian and Renaissance country houses for an outmoded landed class. In addition there were slightly batty architect-craftsmen, the heirs of William Morris, still trying to turn the clock back to before the Industrial Revolution by making chairs

and spurning new technology. Only a handful of Modern Movement buildings of any real merit were produced here during the 1920s and 1930s, and most of these were the work of foreign architects such as Serge Chermayeff, Berthold Lubetkin and Erno Gold-finger who had settled in this country.

Complete the sentences. Write NO MORE THAN THREE WORDS from the text in each gap.

QUESTIONS 30–35: SENTENCE COMPLETION

Because most Anglo-Saxon buildings were constructed from **30** _____, few of them have survived.

The owners of medieval manor houses in Britain earned their reputation through their **31** _____ and elegance.

The 16th-century building was designed to show evidence of **32** _____.

In the 16th century, the use of glass was fashionable, even though it was an **33** _____. Indigo Jones was particularly skilful in designing architecture in the **34** _____ style.

Though William Morris designed **35** _____, his emphasis on hand-crafting influenced architects.

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

ROBOT TEACHERS

If you think of the jobs robots could never do, you would probably put doctors and teachers at the top of the list. It is easy to imagine **Q1**_____ cleaners and factory workers, but some jobs need human connection and creativity. But are we underestimating what robots can do? In some cases, they already perform better than doctors at diagnosing illness. Also, some patients might feel more comfortable sharing personal information with a machine than a person. Could there be a place for robots in education after all?

British education expert Anthony Seldon thinks so. And he even has a date for the robot takeover of the classroom: 2027. He predicts robots will do the main job of transferring information and **Q2**_____ will be like assistants. Intelligent robots will read students' faces, movements and maybe even brain signals. Then they will adapt the information to each **Q3** _____ It is not a popular opinion and it is unlikely robots will ever have empathy and the ability to really connect with humans like another **Q4**_____ can.

One thing is certain, though. A robot teacher is better than no teacher at all. In some parts of the world, there are not enough teachers and 9-16 per cent of children under the age of 14 do not go to school. That problem could be partly solved if robots could teach anywhere and would not get stressed, or tired, or move somewhere for an easier, higher-paid job.

Those negative aspects of teaching are something everyone agrees on. Teachers all over the **Q5**_____ are leaving because it is a difficult job and they feel overworked. Perhaps the question is not "Will robots replace teachers?" but "How can robots help teachers?" Office workers can use software to do things like organise and answer emails, arrange meetings and update calendars. Teachers waste a lot of time doing non-teaching work, including more than 11 hours a week marking **Q6** _____ and writing reports. If robots could cut the time teachers spend marking homework and writing reports, teachers would have more time and energy for the parts of the job humans do best.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements you do not need to use.

A) This course will be dedicated to Phonetics of English.

B) You should apply to these positions by yourself through the website.

C) These courses don't provide you with books.

D) You are not permitted to use any means of communication during the study process.

E) This course enables you to get a higher education in England.

F) The club trainings last until 7:00 every Wednesday.

G) You are asked to join a team for three days next month.

H) You are required to have a certain language degree to apply for this course.

I) You need to have some job experience before applying this job.

J) You are asked to come to the hall to take part in a meeting for students.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them.

List of Headings:

A) Early years of Gilbert
B) The soul of the earth
C) Questioning traditional astronomy
D) A pair of founders of contemporary science
E) Professional and social recognition
F) The great works of Gilbert
G) His change of focus
H) His discovery about magnetism

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

WILLIAM GILBERT AND MAGNETISM

1. The 16th and 17th centuries saw two great pioneers of modern science: Galileo and Gilbert. Gilbert was the first modern scientist, also the accredited father of the science of electricity and magnetism.

2. Gilbert's birth pre-dated Galileo. Born in an eminent local family in Colchester County in the UK, on May 24, 1544, he went to grammar school, and then studied medicine at St John's College, Cambridge, graduating in 1573.

3. He was a very successful and eminent doctor. This culminated in his election to the president of the Royal Science Society. He was also appointed personal physician to the Queen (Elizabeth I), and later knighted by the Queen.

4. Gilbert was first interested in chemistry but later changed his focus due to the large portion of mysticism in alchemy. He gradually developed his interest in physics after the great minds of the ancient, particularly about the knowledge the ancient Greeks had about lodestones.

5. Gilbert investigated the nature of magnetism and electricity. He even coined the word electric. He named the ends of a magnet north pole and south pole. In addition, ordinary iron is always attracted to a magnet.

6. He also questioned traditional astronomical beliefs. Though a Copernican, he built an entire magnetic philosophy and explained that magnetism is the soul of the earth.

PART 4

Questions 21–29

Read the following text and choose the correct answer.

ACTIVITIES FOR CHILDREN

Twenty-five years ago, children in London walked to school and played in parks and playing fields after school and at the weekend. Today they are usually driven to school by parents anxious about safety and spend hours glued to television screens or computer games. Meanwhile, community playing fields are being sold off to property developers at an alarming rate. This change in lifestyle has, sadly, meant greater restrictions on children.

In 1985, Professor Armstrong headed a five-year research project into children's fitness. The survey found that 48 per cent of girls and 41 per cent of boys already exceeded safe cholesterol levels. It also found that 13 per cent of boys and 10 per cent of girls were overweight.

Physical education is under pressure in the UK. Most schools devote little more than 100 minutes a week to it in curriculum time, which is less than many other European countries. Professor Armstrong believes there is far too great an emphasis on team games at school.

As a former junior football international, Professor Armstrong is a passionate advocate for sport. He says children need to have the opportunity to take part in a wide variety of individual, partner and team sports.

Any cardiovascular exercise is a good option, and it does not necessarily have to be high intensity. It can be anything that gets your heart rate up: such as walking the dog, swimming, cycling, skipping, hiking. Even walking through the grocery store can be exercise.

A prevention survey found that children whose parents keep in shape are much more likely to have healthy body weights themselves. Set a good example and get your nutritional house in order first. Incorporate more movement in your family's life.

Choose the correct letter A, B, C or D.

21 **According to paragraph A, what does Professor Neil Armstrong concern about?**
A) Spending more time on TV affect academic level
B) Parents have less time stay with their children
C) The amount of P.E lessons in various countries
D) Increasing speed of property's development

22 **What does Armstrong indicate in Paragraph B?**
A) We need to take a 10 minute walk everyday
B) We should do more activity to exercise heart
C) Girls' situation is better than boys
D) Exercise can cure many disease

23 **What is aim of Fit Kids' training?**
A) Make profit by running several sessions
B) Only concentrate on one activity for each child
C) To guide parents how to organize activities for children
D) Spread the idea that team sport is better

24 **What did Lifshitz suggest in the end of this passage?**

A) Create opportunities to exercise your body
B) Taking elevator saves your time
C) Kids should spend more than 200 calories each day
D) We should never drive but walk

For questions 25-29, decide if the statements agree with the information in the text.

25 **According to Neil Armstrong inactive children may have problem in the future.**

A) True
B) False
C) Not Given

26 **According to Neil Armstrong 40 percent of girls suffer from obesity.**

A) True
B) False
C) Not Given

27 **Majority of children never have enough essential skills for team games.**

A) True
B) False
C) Not Given

28 **Thin children never complain about their health and eyesight.**

A) True
B) False
C) Not Given

29 **Riding a bicycle on regular basis is sometimes harmful for heart.**

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the text below and answer Questions 30-35.

CHILDREN'S PLAY

Brick by brick, six-year-old Alice is building a magical kingdom. Imagining fairy-tale turrets and fire-breathing dragons, she is creating an enchanting world. Although she is not aware of it, this fantasy is helping her capacity for creativity and problem-solving.

When she bosses him around as his teacher, she is practising how to regulate her emotions through pretence. Later on, when they tire of this and settle down with a board game, she is learning about the need to follow rules and take turns with a partner.

Researchers say all this variety is one of the highest achievements of the human species. International bodies like the United Nations and the European Union have begun to develop policies concerned with children's right to play.

But opportunities for free play are becoming increasingly scarce. Outdoor play is curtailed by perceptions of risk to do with traffic, as well as parents' increased wish to protect their children from crime.

The type of play they are interested in is child-initiated, spontaneous and unpredictable. Researchers at the Centre for Research on Play in Education, Development and Learning (PEDAL) hope to provide evidence on the role played by play in how a child develops.

Complete the notes below using NO MORE THAN THREE WORDS from the text.

CHILDREN'S PLAY

Uses of children's play:

building a 'magical kingdom' may help develop **30** _____.

board games involve **31** _____ and turn-taking.

Recent changes affecting children's play:

populations of **32** _____ have grown.

opportunities for free play are limited due to: fear of **33** _____.

For questions 34-35, choose the correct answer A, B, C or D.

34 **Plato praised the advantages of playing as a type of improving abilities for ...**

A) immature
B) children
C) for the deaf
D) adults

35 **Playing outside was restricted by parents in fear of ...**

A) spending too much money on their trainings
B) being their children kidnaped or losing their academic skills
C) wasting their valuable times observing their matches
D) getting their children injured during the games

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE EARLY IDEA OF TRAINS

Did you know that the idea for trains started in Germany? In 1550, some roads in Germany had wooden rails. They ran along the road. They were called "wagon ways." These **Q1** _____ were used for wagons pulled by horses. They were easier than traveling on dirt roads.

In 1776, metal rails were made. The **Q2**_____ were made of iron. They were called "tramways." They were very popular. They went all over Europe. A man named William Jesse had an idea. He made wheels with a groove, or cutout edge. These **Q3**_____ helped the wagons move faster on the iron rails. The wagons were still pulled by **Q4**_____.

The steam engine came next. A man named Richard Trevithick wanted to move people and things from place to place without using animals. He **Q5**_____ the first steam engine. It could carry 10 tons of iron, 70 men, and five wagons for 9 miles in two hours.

A man named John Stevens put all of these ideas together. He is called the "father of the American railroad." He showed how steam trains would work. He got the **Q6**_____ charter railroad. Each new idea has made traveling easier and faster.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which situation matches each text. Each statement can be used ONCE only. There are TWO extra statements you do not need to use.

A) You want to take your children with you to a short walk and have something outside.

B) You want to go a walk in the city sightseeing places and are ready to spend the whole day.

C) You want challenging walk and enjoy panoramic scenery from high.

D) You want to visit a popular and peace place, and take something home.

E) You enjoy walking outside the city and entertain your children during the day.

F) You want to take small walks and entertain your children, and you want an apartment for a night.

G) You are interested in ancient sightseeing and you want to spend time with your children in the open air.

H) You want to walk in the nature and want to have tours.

I) You want to walk less than two hours and visit old houses and enjoy scenery.

J) You have walking experience and you like wild views and prefer to eat food in the village.

7

Q7 Lime House and Country Park

The house attracts thousands of visitors, but this is a pleasant walk (for the fit) away from the crowds, through parkland, woods and up onto the hills. Popular with bird-watchers. Allow three hours. The house was built in 1570. Gardens closed to the public; information centre, cafe and souvenir shop open daily.

8

Q8 Devonshire Park

Take a really enjoyable walk in the countryside surrounding the park. Allow at least half a day, or make it a full day by visiting the adventure playground and farmyard (both great for young children). Stop at the cafe (open all day) or enjoy the fantastic gardens, with beautiful fountains. Guided walks available for small groups.

9

Q9 Hope Village

A leisurely way to spend an hour or two is by visiting the busy village of Hope with its lovely old cottages, traditional pubs and country gardens. A gentle walk towards the hills will soon bring you to superb views.

10

Q10 Cornford

This is an easy walk through a little-known valley beside clear streams with woodland flowers, birds and animals. See the 200-year-old buildings from the cloth-making industry now standing empty. Private tours can be arranged. Allow half a day for the walk.

11

Q11 Howden Lake

This two-hour walk attracts thousands of visitors. When the water is low, you can see a village which was flooded 300 years ago. Quiet cafe with beautiful views. Children can go sailing and windsurfing on the lake with trained instructors.

12

Q12 Stanton

This walk is definitely for very fit walkers only - the tracks get very slippery after rain. Allow six hours and start early. You are unlikely to meet another person all day. Fantastic views of farmland in the valleys below. Be sure to pack sandwiches - you will be up on the hilltops all day.

13

Q13 Strines

You need to be used to walking to successfully complete this seven-hour walk through the wildest scenery in the area. Follow a little-known footpath to the highest point for miles. The traditional pub down in the village serves hot food from 12.00 daily.

14

Q14 Langsett

After a steep climb, this is an exciting walk along easy paths, which are crowded at weekends. The views are dramatic and it is a popular place for family picnics. Guided walks start from the nearby village (10 am Sundays) and visit 800-year-old woodland and ruins dating back two thousand years.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below.

List of Headings:

A) Hurricanes in history
B) How hurricanes form
C) How a laboratory exercise re-routed a hurricane
D) Exciting ways to utilise future technologies
E) Are hurricanes unbeatable?
F) Re-visiting earlier ideas
G) How lives might have been saved
H) A range of low-tech methods

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

CAN HURRICANES BE MODERATED OR DIVERTED?

I. Each year, massive swirling storms bringing along winds greater than 74 miles per hour wipe across tropical oceans and land on shorelines - usually devastating vast swaths of territory. When these rolling tempests strike densely inhabited territories, they have the power to kill thousands and cause property damage worth billions of dollars. But can we ever find a way to control these formidable forces of nature?

II. Our current studies are inspired by my past intuition when I was learning about chaos theory 30 years ago. The reason why long-range forecasting is complicated is that the atmosphere is highly sensitive to small influences and tiny mistakes can compound fast. However, if we intentionally applied slight inputs to a hurricane, we might create an influence that could affect the storms, either by steering them away from densely populated areas or by slowing them down.

III. To find out whether the sensitivity of the atmospheric system could be exploited to adjust hurricanes, our research team ran simulation experiments on computers for Hurricane Iniki that occurred in 1992. We first picked the spot where we wanted the storm to stop after six hours. Then we used this target to generate artificial observations and put these into the computer model.

IV. The most significant alteration turned out to be the initial temperatures and winds. In terms of structure, the initial and altered versions of Hurricane Iniki seemed almost the same, but changes in critical variables were so substantial that the later one veered off the track to the west during the first six hours of the simulation and then travelled due north, leaving Kauai untouched.

V. Future earth-orbiting solar power stations, equipped with large mirrors to focus the sun's rays and panels of photovoltaic cells to gather and send energy to the Earth, might be adapted to beam microwaves to be absorbed by water vapour molecules around the storm. The microwaves would cause these molecules to vibrate and heat up the surrounding air, which then leads to the hurricane slowing down or moving in a preferred direction.

VI. Simulations of hurricanes have implied that by changing precipitation, evaporation and air temperature, we could make a difference to a storm's route or abate its winds. Intervention could include cloud seeding and other rain-inducing elements to deprive a hurricane of the water it needs to grow and multiply from its eyewall, which is the essential characteristic of a severe tropical storm.

PART 4

Questions 21–29

Read the following text for questions 21-29.

SMELL AND HUMAN EXPERIENCE

A A survey conducted by Anthony Synott at Montreal's Concordia University asked participants to comment on how important smell was to them in their lives. It became apparent that smell can evoke strong emotional responses. A scent associated with a good experience can bring a rush of joy, while a foul odour or one associated with a bad memory may make us grimace with disgust. The perception of smell, therefore, consists not only of the sensations of the odours themselves, but of the experiences and emotions associated with them.

B Odours are also essential cues in social bonding. In one well-known test, women and men were able to distinguish by smell alone clothing worn by their marriage partners from similar clothing worn by other people. Most of the subjects would probably never have given much thought to odour as a cue for identifying family members before being involved in the test, but as the experiment revealed, even when not consciously considered, smells register.

C In spite of its importance to our emotional and sensory lives, smell is probably the most undervalued sense in many cultures. The reason often given for the low regard in which smell is held is that, in comparison with its importance among animals, the human sense of smell is feeble and undeveloped. While it is true that the olfactory powers of humans are nothing like as fine as those possessed by certain animals, they are still remarkably acute. Our noses are able to recognise thousands of smells, and to perceive odours which are present only in extremely small quantities.

D Smell, however, is a highly elusive phenomenon. Odours, unlike colours, cannot be named in many languages because the specific vocabulary simply does not exist. Nor can odours be recorded: there is no effective way to either capture or store them over time. In the realm of olfaction, we must make do with descriptions and recollections.

E Most research on smell undertaken to date has been of a physical scientific nature. Significant advances have been made in understanding the biological and chemical nature of olfaction, but many fundamental questions have yet to be answered. Researchers still need to decide whether smell is one sense or two, and how smells can be measured objectively given the nonphysical components. These questions mean that interest in the psychology of smell is inevitably set to play an increasingly important role for researchers.

Choose the correct letter A, B, C or D.

21 **According to the introduction, we become aware of the importance of smell when**

A) we discover a new smell.
B) we experience a powerful smell.
C) our ability to smell is damaged.
D) we are surrounded by odours.

22 **The experiment described in paragraph B**

A) shows how we make use of smell without realising it.
B) demonstrates that family members have a similar smell.
C) proves that a sense of smell is learnt.
D) compares the sense of smell in males and females.

23 **What is the writer doing in paragraph C?**

A) supporting other research
B) making a proposal
C) rejecting a common belief
D) describing limitations

24 **What does the writer suggest about the study of smell in paragraph E?**

A) The measurement of smell is becoming more accurate.
B) Researchers believe smell is a purely physical reaction.
C) Most smells are inoffensive.
D) Smell is yet to be defined.

Decide if the following statements agree with the information given in the text.

25 **The research shows that the same scent can awake the same emotions in each person.**

A) True
B) False
C) Not Given

26 **It is always difficult to identify an individual we know from their outfits among others.**

A) True
B) False
C) Not Given

27 **People all around the world do not show the same attitude towards smell.**

A) True
B) False
C) Not Given

28 **Children can identify their mothers better than women identify their husbands.**

A) True
B) False
C) Not Given

29 **Researchers have already lost interest in terms of finding answers to some complex questions.**

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

STADIUMS: PAST, PRESENT AND FUTURE

A Stadiums are among the oldest forms of urban architecture: vast stadiums where the public could watch sporting events were at the centre of western city life as far back as the ancient Greek and Roman Empires, well before the construction of the great medieval cathedrals and the grand 19th- and 20th-century railway stations which dominated urban skylines in later eras. Today, however, stadiums are regarded with growing scepticism.

B The amphitheatre of Arles in southwest France, with a capacity of 25,000 spectators, is perhaps the best example of just how versatile stadiums can be. Built by the Romans in 90 AD, it became a fortress with four towers after the fifth century, and was then transformed into a village containing more than 200 houses. During the 19th century, it was converted back into an arena for the staging of bullfights.

C Another example is the imposing arena of Verona in northern Italy, currently considered one of the world's prime sites for opera. The area in the centre of the Italian town of Fucca, known as the Piazza dell'Anfiteatro, is yet another example of an amphitheatre becoming absorbed into the fabric of the city. The site evolved in a similar way to Arles and was progressively filled with buildings from the Middle Ages until the 19th century, variously used as houses, a salt depot and a prison. Today, the ruins remain embedded in shops and residences surrounding the public square.

D There are many similarities between modern stadiums and ancient amphitheatres intended for games. But some flexibility was lost at the beginning of the 20th century, as stadiums were developed using new products such as steel and reinforced concrete, and made use of bright lights for night-time matches.

Complete the summary below. Choose ONE WORD ONLY from the passage for each answer.

ROMAN AMPHITHEATRES

The Roman stadiums of Europe have proved very versatile. The amphitheatre of Arles, for example, was converted first into a **30** _____, then into a residential area and finally into an arena where spectators could watch **31** _____. Meanwhile, the arena in Verona is famous today as a venue where **32** _____ is performed. The site of Lucca's amphitheatre has also been used for many purposes over the centuries, including the storage of **33** _____.

For questions 34-35, choose the correct answer A, B, C or D.

34 **Which is true about cathedrals and the grand railway?**

A) Both were used as public places to watch sporting events by ancient Greeks and Romans.

B) Both were regarded as masterpieces at the same time as stadiums in ancient times.

C) Both gained reputation for high buildings after stadiums did.

D) Both gained reputation for high buildings after the stadiums did in the 1740s.

35 **The area, which is regarded as the Piazza dell' Anfiteatro, ...**

A) was used only for one purpose.

B) was known for its few constructions.

C) was influenced by the constructions, which were erected before 1800.

D) was known for its best houses and prison in that time.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE LONDON UNDERGROUND

Here in Britain, we have been celebrating a birthday. Not the **Q1** _____ of a person, however, but the birthday of a railway. One hundred and fifty years ago, in January 1863, the first underground railway in the world carried its first passengers. It ran for 6 kilometres from Paddington in London to a place close to the City, which is the name we call London's main business district.

The new **Q2**_____ was controversial and unpopular with many people. The men building the railway dug up the streets and knocked down houses and other buildings. They **Q3** _____ a deep trench and put the railway track at the bottom. Then they covered over the new railway and remade the surface of the street. Not surprisingly, the construction work caused chaos in London for many months.

More underground railway lines opened in the following years. The railway companies found new ways to build and operate them. Instead of digging huge **Q4**_____s in the streets, they bored holes deep under the city. People called these underground lines "tubes" because the tunnels had a circular shape like tubes. Nowadays, we say "the Tube" to mean all of the London underground system. It was of course impossible to use steam engines on the **Q5**_____ Tube lines; they had electric trains instead. By the beginning of the 20th century, electricity had replaced steam on all the underground lines.

To finish this podcast, here is some Underground vocabulary for you to learn.

When you go into an Underground station, you will see signs that say things like "Bakerloo Line southbound". "Southbound" means "traveling south" – and "northbound" means traveling north, and I am sure you can work out what "eastbound" and "westbound" mean.

After you have followed the signs and found the right platform, and the train has arrived, you will often hear an announcement telling passengers to "mind the gap". To "mind" something means to be careful – the **Q6**_____ means "be careful. There is a gap between the edge of the platform and the doors of the train. Take care not to fall down."

PART 2

Questions 7–14

The teenagers below all want to work as volunteers to help the environment. There are descriptions of clubs which help the environment. Decide which club would be the most suitable for the people below.

7

Q7 – Ali

Ali lives in the country and wants to help wildlife in his area. He has experience caring for animals and would like to share this knowledge with other young people.

8

Q8 – Sam

Sam lives in a harbour town and is worried about the amount of pollution in his area. He wants to know what effect this is having on the local wildlife and he would also like to take part in events to help reduce pollution where he lives.

9

Q9 – Hannah

Hannah only has free time at the weekend to meet other teenagers interested in making things out of materials that are recycled. She wants to help organise a social event to make more people in her town start reducing the amount of rubbish they throw away.

10

Q10 – Fatema

Fatema has brilliant computer skills and would love to join a club that meets online. She wants to share information to let people know which animals are in danger and ways to help them.

11

Q11 – Joe

Joe lives in a city and wants to meet other people who are interested in the environment. He wants to know how pollution affects plants and learn how to grow food in a city garden project.

12

Q12 – Billy

Billy would like a job where he can be active outside. He wants to earn as much money as possible so that he can buy a new bike. He's happy to work hard.

13

Q13 – Yasmin

Yasmin is crazy about anything related to food. She hopes to work during the week as she wants to spend Sundays with her family. She's shy and doesn't want to work with customers.

14

Q14 – Zoe and Bea

Zoe and Bea don't want to cycle very far and they can't start early in the morning. They're interested in art and would like to have lunch somewhere near the sea.

A) Safe Zone – We provide a safe place for wildlife such as bats, snakes and rabbits that have been injured. Our teams of experts care for them until they're healthy enough to go back into nature. Our team wants to train more young people to help us with jobs like cleaning the cages and preparing the animals' food.

B) Earth's Friends – We get creative at Earth's Friends! This youth club is for teens who want to get involved with online projects such as making more people aware of pollution in cities and how it is affecting the climate. Our website has a fantastic travel planner, so you can see how walking or cycling reduces pollution in your local area.

C) Eco-Teen – Come and help clean up rubbish in our city parks! It's not easy, but you'll make loads of new friends who share the same passion as you do. And it's not all hard work – we have summer barbecues, guest speakers and group discussions about how we can help to protect animals in the area.

D) Green Time – Come and learn about all the different species that live in our local fields, woods and back gardens. And if you've got any experience looking after animals, let us know! We're short on youth volunteers who can offer tips and advice at our weekly teen meetings in villages and towns across the nation. Our club wants to provide a softer environment for local creatures – big and small – by holding talks and events.

E) Listen Up! – You can access our weekly meetings from any time zone on our award-winning website, where you can chat with young people concerned about the environment. Our members are passionate about making people aware of the things everyone should do to save and protect species all over the Earth. Members post updates and articles about wildlife issues weekly.

F) Genius! – Don't put your bottles, newspapers and tin cans in the recycling bin – bring them to any Saturday-morning meeting, when our expert environmental artist shows you how to make art out of rubbish! Take part in planning the annual event to show off your creative projects to the public, and share tips on ways to reduce waste.

G) Nature First – Come and get some fresh air and meet people of all ages concerned about the environment at our beach project, where we collect plastic to be recycled in a coastal area near you. Learn how waste in our oceans harms sea life and what you can do about it.

H) Band Together – You won't believe you're in the middle of the city where our club meets every Sunday afternoon. Come and see all of the different crops we produce at our little farm. Young and old are invited to come and find out when to pick what you've planted when you join Band Together. We also discuss monthly topics such as vehicles and how they affect nature.

I) Care home assistant – A young person is wanted to work at our care home for four hours on Saturday and Sunday afternoons. The job requires you to make tea and fetch snacks for our elderly residents, as well as sit and chat to them. All our assistants must have basic kitchen skills.

J) Farm assistant – The position of farm assistant is available over the summer period. The job involves picking fruit for several hours per day and assisting with the packing of the fruit before it is sent for delivery. You must be fit and happy to work outdoors for long periods of time. No previous experience needed. We offer a good salary.

K) Kitchen assistant – We need a part-time assistant to work in the small kitchen or our hotel restaurant. The job involves preparing food before the restaurant opens and then cleaning the dishes after we have served the food. We require someone to work three hours Tuesday to Saturday, and Friday and Saturday evenings. We offer good pay.

L) Seaview Gallery – Less than an hour's ride along the coast road, shows paintings and photographs by local artists in attractive rooms on the cliffs. Open 2pm–5pm. There's a teashop next door which serves delicious lunches and teas.

M) An excellent destination for families is Ailsham, where there is a campsite. The route includes only one tiny hill and the views of woods and farmland are lovely. Stop for a picnic under the trees. When you arrive, enjoy a swim in the river, then spend a night in one of the tents provided.

PART 3 Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Instruction on how to recognise authentic Maori hooks from counterfeit ones
B) A description of a different type of hooks that are not used to catch fish
C) An acknowledgement that Maori design and craftsmanship are still relevant in the modern world
D) An investigation into how the hooks functioned so effectively
E) A description of how modern technology began to dominate and eventually took over from traditional hook construction
F) A list of raw materials used to construct hooks
G) An outline of how different styles of hooks and types of materials were employed to catch larger fish
H) An account of how the Maori employed new technology and adapted it

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

MAORI FISH HOOKS

1. When Polynesians first came to New Zealand sometime within the years 1100–1300 AD, they didn't have the technology necessary to heat and manipulate metal out of rocks. Meanwhile, fish was the settlers' main food source at the time, so fishermen made their hooks and fishing gear out of wood, bone, stone and shells. Other plants native to the island of New Zealand, like flax (harakeke), cabbage tree (ti) and astelia (kiekie) gave the necessary fibrous material to make fishing lines and nets of greater or equal strength to the jute, which was being used by the Europeans at the time. However, as a material, metal is more malleable, and can be changed into any shape, while natural materials are limited in the shapes they can take on. The Maori fish hooks needed to be more innovative in the ways that they dealt with these limitations.

2. The Museum of New Zealand Te Papa Tongarewa did their own recent study on Maori fish hooks two hundred and thirty years later, and were able to demonstrate that the unique hook design was a matter of function. The hook's design allowed it to catch fish by spinning away from the direction of the point and catching their jaws, instead of poking a hole through the fish or by being used as a lever, which some archaeologists also suggested. It seems that the design of the Maori fish hook is, perhaps, the world's most efficiently and masterfully designed fish hook, likely superior to any modern metal fish hook of today.

3. To make larger hooks, Maori used shanks made of strong wood, with stout points made of bone or shell. They tied tree branches and saplings together to grow them into the ideal shapes for building, then harvested the plants when they grew to the appropriate size. They hardened wood by carefully drying it and burying underground with fires lit above it. Human bone was often used for bone points, which they lashed securely to a groove at the end of the shank with pre-made flax materials (muka). When they wanted to catch larger species like sharks, groper and ling, they used composite hook. However, average the traditional hook was usually not longer than a three finger breadth (128 mm length).

4. Maori adopted new materials quickly once they became available with European explorers, sealers and whalers who began to arrive towards the end of the 1700s. At this point, the Maori were still making their fish hooks, but now using metals and imported materials. Wooden and flax parts of old, abandoned fish hooks decomposed quickly as traditional hooks were cast away in favor of new ones. Tools made of luxury materials such as ivory or greenstone may have been kept around as decorations items, with stylized Maori fish hooks seen today as a symbol of cultural revitalization.

5. The Maori kept recreating traditional designs even as new materials poured in, preferring hook shapes which were introduced by Pakeha into the 1800s. By following the tradition of the rotating hook design, they remained connected with a part of their traditional culture. In the end, though, it was only a matter of time before the amount of mass-produced metal European hooks finally overwhelmed the area, highlighting the difficulty of making hooks from nails, horseshoes and other metal objects, and finally the use of the traditional designs fell out of favor.

6. By the end of the 19th and beginning of the 20th century, tourists and collectors' demands for Maori artifacts had grown, leading manufacturers to produce large quantities of forged hooks. These replicas were then traded with both Maoris and Europeans to use as forgeries of the real thing, sometimes directly commissioned by artifact dealers themselves. Fake hooks can be spotted by their cheap construction, inconsistent materials, rudimentary lashings, odd or over-elaborate decorative carvings, and finally, by the lack of in-turned points or angled grooves used to actually attach the fishing line.

PART 4 Questions 21–29

Read the following text for questions 21-29.

MARKETING AND MIND CONTROL

How marketing and advertising appeal to the associative nature of the brain

While there had been a long tradition of giving rings as a commitment to marry, the custom of giving diamond engagement rings was in large part manufactured by one of the most effective marketing campaigns in history. In the early 1900s, diamond sales were declining, posing a serious problem for the company that essentially had control over the diamond market. In 1938, this company hired an advertising agency. Which proposed reshaping social attitudes toward diamonds? As well as magazines showing film stars draped in diamonds, the agency arranged for movies to incorporate diamond engagement rings into their plots. The campaign culminated with the slogan: 'A diamond is forever.' At the time, the approach was unique. Rather than pushing a brand, the objective was to promote diamonds as the symbol of everlasting love. This was achieved by exploiting the associative nature of the brain: associating neurons! Activated by the concept of 'love' with neurons that encoded the concept of "diamonds. By 1941, diamond sales had increased by 55%.

Advertising comes in many forms, from blatant neon signs to subtly embedded products in movies. In each case, the goal is to mould our habits, desires and opinions. Our visual system is targeted by an avalanche of information on the internet, street posters, and billboards and in movie theatres. Our auditory system submits to catchy radio jingles and telemarketers. More surreptitiously, our olfactory system is targeted by variations of vanilla and citrus perfumes aimed at enticing US to linger in a retail outlet. It is difficult to measure how effective these campaigns are, but as in the 'A diamond is forever' campaign, they can be so successful that they change the fabric of our culture. In the case of bottled water, we are swayed by advertising into paying for something that we can obtain for free. Most people cannot distinguish bottled from tap water, which is why you rarely hear of a bottled water company proposing a blind taste test.

So why is marketing such an effective mind-control technique? It is interesting to consider whether other animals exhibit anything analogous to humans' susceptibility to advertising. If we provide a lab rat with two types of cereal, it will consume approximately the same amount of each. However, if we put that rat with another rat that spent its day eating just one type, when faced with a choice, our rat will now show a preference for the same type as the other rat was eating. Psychologists call this 'socially transmitted food preference'.

What many regard as the first documented examples of cultural learning in primates started with a clever monkey that lived in a colony of Japanese monkeys on the island of Koshima. She began taking her dirt-covered sweet potatoes to the river to wash them before eating them. Upon seeing this, a few 11 other open-minded monkeys picked up on the idea. Potato washing then spread from monkey to monkey and, over the course of a few years, most monkeys were eating clean potatoes. Humans are clearly not the only animals to engage in imitation and social learning.

Learning by observation can be an extraordinarily valuable brain feature, this is how we learn to communicate and perform motor skills as well as deal with many everyday problems. For example, a newcomer struggling to purchase tickets and navigate the subway system in a foreign city may step back to learn from the people nearby. Humans and other primates exhibit multiple forms of imitative learning and this is called cultural transmission.

A component of advertising relies on the marketer's ability to tap into the brain's propensity for imitation. Anybody who has watched TV knows advertisements are disproportionately populated with attractive, successful looking individuals. If we are going to imitate someone, we are more inclined to imitate those who appear to be popular and appealing.

Although not all researchers are convinced by the findings, a number of studies indicate that some animals also imitate dominant members of their group. Primatologist Frans de Waal provides anecdotal evidence of preferential imitation among chimpanzees. He noted that in one particular group the dominant male was hurt and was limping as a result. Soon unlikely if a non-dominant male had been injured.

Imitation is undoubtedly an invaluable ability, but often our propensity to imitate generalises indiscriminately, leading to poor decisions. When athlete Dick Fosbury revolutionised the high jump by jumping over the bar backward in 1968, imitators obviously copied his jumping style, not his brand of sports shoes. However, today, sports people appear in advertisements asking US to buy the laptops or sports drinks that they promote. Rationally, we know these people's success did not depend on these products, so it seems our propensity to purchase products relates more to neural programs that evolved to encourage imitation of those further up the social ladder. Today, companies engage in stealth marketing campaigns in which people are paid to frequent bars or websites to covertly promote certain products. Companies also perform studies in which they track the eye movements of people viewing displays, and carefully craft names, packages and jingles associated with their products. While we may like to believe that manipulation on a grand scale would not be possible, that's not to say that advertising is innately harmful. To the contrary, the marketing of products or ideas is essential to human culture. The point is that we should ensure our choices reflect our actual goals and desires, and we must distinguish between the dissemination of information which is for our own good, and our manipulation for the benefit of companies.

Choose the correct letter A, B, C or D.

21 According to the writer, which marketing technique attempts to make consumers stay in a shop for longer?

A) playing appealing music
B) emitting pleasant scents
C) displaying attractive posters
D) making in-store announcements

22 The writer mentions bottled water in order to show that

A) consumers buy it because of the fact that it is marketed.
B) people purchase it despite the fact that it has no taste.
C) marketers need not do taste tests when a campaign is effective.
D) tests prove that people cannot differentiate it from tap water.

23 According to the writer, socially transmitted food preference occurs when

A) only dominant members of an animal group influence what others eat.
B) the same types of animals naturally prefer the same types of food.
C) animals are influenced by what any other animals of the same species eat.
D) a food type is more desirable because an animal views that food as scarce.

24 According to the writer, how is learning by observation and imitation a useful feature of the brain?

A) it helps people overcome challenges.
B) positive models can influence social behaviour.
C) it can give an advantage when communicating with others.
D) cultural norms and relationships can be understood more easily.

25 **According to the writer, how does television advertising exploit the human tendency to imitate others?**

A) It shows buying behaviour that marketers want to encourage in viewers.
B) It features people who have a desirable image.
C) It shows older people whom teenagers admire.
D) It features successful people endorsing products responsible for their success.

Do the following statements agree with the views of the writer in the Reading Passage?

26 **The diamond campaign worked by making a connection in people's minds between diamonds and luxury.**

A) True
B) False
C) Not Given

27 **People are more aware of visual marketing than auditory marketing.**

A) True
B) False
C) Not Given

28 **The campaign advertising diamonds had a positive influence on society.**

A) True
B) False
C) Not Given

29 **There is still some uncertainty about whether animals copy the behaviour of the most powerful animals among them.**

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

HOW THE MIND AGES

The way mental function changes is largely determined by three factors – mental lifestyle, the impact of chronic disease and flexibility of the mind.

Experiments have shown that younger monkeys consistently outperform their older colleagues on memory tests. Formerly, psychologists concluded that memory and other mental functions in humans deteriorate over time because of changes in the brain. Thus mental decline after young adulthood appeared inevitable. The truth, however, is not quite so simple.

Stanley Rapoport at the National Institute of Health in the United States measured the flow of blood in the brains of old and young people as they completed different tasks. Since blood flow reflects neural activity, Rapoport could compare which networks of neurons were the same, the neural networks they used were significantly different. The older subjects used different internal strategies to accomplish comparable results at the same time, 'Rapoport says. At the Georgia Institute of Technology, psychologist Timothy Salthouse compared a group of fast and accurate typists of college age with another group in their 60s. Both groups typed 60 words a minute. The older typists, it turned out, achieved their speed with cunning little strategies that made them more efficient than their younger counterparts. They made fewer finger shifts, gaining a fraction of a second here and there. They also read ahead in the test. The neural networks involved in typing appear to have been reshaped to compensate for losses in motor skills or other age changes.

In fact, there's evidence that deterioration in mental functions can actually be reversed. Neuropsychologist Marion Diamond at the University of California has shown that mental activity maks neurons sprout new dendrites* which establish connections with other neurons. The dendrites shrink when the mind is idle. For example, 'when a rat is kept in isolation, the animal's brain shrinks, but if we put that rat with other rats in a large cage and give them an assortment of toys, we can show, after four days, significant differences in its brain,' says Diamond. 'After a month in the enriched surroundings, the whole cerebral cortex has expanded, as has its blood supply.' But even in the enriched surroundings, rats get bored unless the toys are varied. 'Animals are just like we are. They need stimulation,' says Diamond. A busy mental lifestyle keeps the human mind fit, says Warner Schaie of Penn State University. 'People who regularly participate in challenging tasks retain their intellectual abilities better than mental couch potatoes.'

In his studies, Schaie detected a decline in mental function among individuals who underwent lengthy stays in hospital for chronic illness. He postulated it might be due to the mental passivity encouraged by hospital routine.

One of the most profoundly important mental functions is memory. Memory exists in more than one form, what we call knowledge – facts – is what psychologists such as Harry Bahrick of Ohio Wesleyan University call semantic memory. Events, conversations and occurrences in time and space, on the other hand, make up episodic memory. It's true that episodic memory begins to decline when most people are in their 50s, but it's never perfect at any age.

Probing the longevity of knowledge, Bahrick tested 1,000 high school graduates to see how well they remembered the school subject algebra. Some had completed the course a month before, other 50 years earlier. Surprisingly, he found that a person's grasp of algebra did not depend on how long ago he'd taken the course. The determining factor was the duration of instruction. Those who had spent only a few months learning algebra forgot most of it within two or three years while others who had been instructed for longer remembered better. According to Bahrick, 'the long-term residue of knowledge remains stable over the decades, independent of the age of the person and the memory.'

Perhaps even more important than the ability to remember is the ability to manage memory – a mental function known as metamemory. 'You could say metamemory is a byproduct of going to school,' says psychologist Robert Kail of Purdue University. 'The question-and-answer process, especially exam taking, helps children learn and teaches them how their memory functions. This may be one reason why the better educated a person is, the more likely they are to perform well in many aspects of life and in psychological assessments: A group of adult novice chess players were compared with a group of child chess experts at the game. But when asked to remember the patterns of chess pieces arranged on a board, the children won.' Because they'd played a lot of chess, their knowledge of chess

was better organized than that of the adults, and their existing knowledge of chess served as a framework for new memory, 'explains Kail. Cognitive style, another factor in maintaining mental function, is what Schaie calls the ability to adapt and roll with life's punches. 'He measured mental flexibility with questions and tests requiring people to carry out in an offbeat way an everyday activity they had done millions of times. One example was asking people to copy a paragraph substituting uppercase letters for lowercase ones. These tests seem silly, but flexible-minded people manage to complete them,' says Schaie. 'The rigid person responds with tension instead and performs poorly. Those who score highly on tests of cognition at an advanced age are those who tested high in mental flexibility at middle age'.

On a more optimistic note, one mental resource that only improves with time is specialized knowledge. Crystallised intelligence about one's occupation apparently does not decline at all until at least age 75. Vocabulary is another such specialized form of knowledge. Research clearly shows that vocabulary develops with time. Retired teachers and journalists consistently score higher on tests of vocabulary and general information than college students.

Choose the correct letter A, B, C or D.

30 **What does the writer say about the performance of older typists on the test?**

A) They used different motor skills from younger typists.
B) They had been more efficiently trained than younger typists.
C) They used more time-saving techniques than younger typists.
D) They had better concentration skills than younger typists.

31 **The experiment with the rats showed that**

A) brain structure only changed when the rats were given a familiar toy.
B) the rats became anxious after a lengthy period of time alone.
C) the rats lived longer then they were part of a social group.
D) the rats' brains expanded or shrank depending on the level of mental activity.

Complete the summary below. Choose ONE WORD ONLY from the passage for each answer.

TYPES OF MEMORY

Psychologists distinguish between two different types of memory: **32**_____ and **33**_____ memory. A study was conducted into people's knowledge of **34** _____ to determine recall ability. This aspect of memory was found to be a function not of age but rather of length of tuition. School also helps with a brain function called **35**_____.

PART 1

Questions 1–7

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

FRIENDSHIP AND LOVE

A strong friendship takes a significant amount of time to develop. It will not just magically mature overnight. A **Q1** _____ involves committing oneself to help another person whenever a need arises. I believe that, nothing can replace a true friend, not material objects, or money, and definitely not a boy.

I met this guy a couple summers ago who **Q2**_____ ended up spending almost all of my free time with. His parents did not approve of our dating because of our age difference, but we did anyway. He had told me the day we met that he had joined the air force and would leave for overseas that coming October. After three months had passed, the time came when he had to **Q3**_____. This left me feeling completely alone.

I turned to my friends for support, but to my surprise, they did not really care. I had spent so much time with this **Q4** _____ and so little time with them, that they did not feel sorry for me when he left. For so long **Q5**_____ had become the only constant in my life, and I had taken them for granted over something I could not guarantee would even last.

When my boyfriend came back, our relationship changed. I tried to fix all the aspects in my life that had gone so wrong in the previous six months.

This experience taught me that true friendships will only survive if one puts forth effort to make them last. Keeping friends close will guarantee that someone will always have a shoulder to cry on. When a **Q6**_____ falls apart, a friend will always do everything in their power to make everything less painful. As for me, I try to keep my **Q7**_____ as close as I can. I know they will always support me in whatever I do, and to them, I am eternally grateful for a second chance.

PART 2

Questions 8–12

The people all want to read a book. Read the descriptions of eight books. Decide which book would be most suitable for each person. For Questions 8-12, select the best book.

A) Henry Jowett 'The Portrait of a Woman' — The charming Evelyn Blanchet was a French woman who came to England in the eighteenth century and won the hearts of young men wherever she appeared. This enjoyable romance shows us the elegant evening dresses, the beautiful rooms, and Evelyn's gleaming eyes in an imaginary world full of gardens and palaces.

B) Patience Jones 'The English Corner' — In a quiet English village by the sea, a young French widow gets a second chance at love. Annabel Ginger hasn't been back to the Village of Abberton since she buried her husband two years ago. Now she's returning with her 4-year-old daughter, Alice.

C) Robin Greene 'Migration' — In the dark future of Jupiter XI, more than 90 percent of the world's population died. Most people killed themselves or were killed by others who were listening to voices steering their dreadful actions. Those who survived live in a very hostile environment. There are so many different twists or unexpected turns.

D) Ann Kaufman 'Baby Dance' — This fabulous board book follows five American puppies (including a rather cheeky Yorkie) as they play and dance the day away. Using delightful rhyme and simple language, an American author Ann Kaufman has created a fun, rhythmical story that is a joy to read and alluring to little ears.

E) Bruce Nolan 'Landia' — Landia is a medieval world filled with pirates and warriors, adventures and battles, and a group of boys trying to find their place in the world. The story focuses on a bunch of naughty boys who, as part of their coming of age, must go through six months of tough, physical training on land and sea to become warriors.

F) Automobile Association 'Walks and Tours in England' — A free guide (French edition) with practical tips and advice to help you get the most out of your trip to the United Kingdom. The guide includes detailed information on history, museums, galleries, churches as well as some useful information about accommodation. There are suggested tour routes, maps and directions.

G) Izaak Watson 'The Perfect Storm' — The "Silver Guide" series from St. George's Press has been around since the late '60s and is known for its comprehensive coverage of a wide range of topics related to nature. "The Perfect Storm" is no exception. The book is widely considered to be one of the leading guidebooks for novice and experienced anglers.

H) Doris McCartney 'The Princess' — Open the book, and you won't be disappointed, for what follows is a fascinating adventure with fantastic places and amazing creatures, all to be found just on the verge of reality, if only you could squeeze through the lavender hedge at the bottom of the garden to find it.

8

Q8

James is looking for a book for his granddaughter's fourth birthday present. Ideally, it should be about animals or elves and be a story he can read to her many times.

9

Q9

Susan is twenty-one and works for a multinational company. She likes romance novels very much, especially if they contain descriptions of fashionable clothes, magnificent houses, and parties.

10

Q10

Andre is from Paris and travels across England on business very often. He would like a book that offers accurate information as he sometimes has time for sightseeing between business meetings.

11

Q11

Tia is a chemistry student, but she would like to read science fiction in her free time. She wants to buy a well-written book with a surprise at the end.

12

Q12

Peter wants to buy a book as a present for his friend Robin. Robin is keen on fishing and likes spending time in nature.

PART 3

Questions 13–17

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

I) Examples of customization
II) Unusual keepsakes
III) A new approach
IV) A simple cell phone
V) Unbelievable material
VI) A strange TV
VII) Number of products shown on the festival

13. Paragraph A **14. Paragraph B** **15. Paragraph C**
16. Paragraph D **17. Paragraph E**

SIMPLICITY REIGNS AT LONDON'S BIGGEST DESIGN FESTIVAL.

A. One was the launch of two consumer electronics products designed to simplify and beautify our technology-addled lives. Both chose the new London Design Festival venue of Somerset House to show their wares. The first was a mobile phone launched by Swiss company Punkt and designed by Jasper Morrison that allows users to make calls and texts only (well, it has an alarm clock and an address book too). Punkt founder Petter Neby doesn't believe it will replace your smart phone but suggests users fit it with the same SIM card as your main phone and use it in the evenings, weekends and on holiday.

B. Customizable online furniture was also very much in vogue at this year's festival. But rest assured, weird and unreliable software or off-the-wall designs sent to a 3D printer somewhere and arriving months later, seem to be a thing of the past. Customization may finally have come of age. Two examples were Scandi-brand Hem that combined good design by the likes of Luca Nichetto, Form Us With Love and Sylvain Willenz with affordable price points. The fact that the brand opened a pop-up store in Covent Garden during the festival is a recognition of the importance of both physical and online spaces that work seamlessly together.

C. A definite highlight was the massive space taken over by the Design & Crafts Council of Ireland and filled with weavers and potters doing their thing and showing their wares. Irish Design had another delectable stand over at the Rochelle School in East London too. The Souvenir Project was a series of nine non-cliché souvenirs made in Ireland and included a rainbow plate by Nicholas Mosse Pottery that featured rows of animals, flowers and watering cans and commemorated the legalization of same-sex marriage in Ireland in May 2015.

D. If there was one material that could be said to define the festival it might just be Jesmonite, the wonder man-made building composite. Lighter and more sustainable than concrete, its dramatic capabilities were brought to life by London-based design studio PINCH and their tour-de-force limited edition Nim table and Swedish artist Hilda Hellström's giant colorful volcano made for the restaurant in London's Ace Hotel. A show called Matter of Stuff near Covent Garden was in on the jesmonite act too, but even more intriguingly was presenting vases made out of Propolis, a resinous material collected by bees and used to seal gaps in hives that, according to their designer Marlene Huissoud, behaves like glass.

E. Finally, this was the year that Chinese Design finally displayed a well-edited and inspired showcase of products. Despite the mouthful of a title, Icon Presents: Hi Design Shanghai stand at 100% Design was a meaningful selection of designers exploring materials and ideas. Young design duo Yuue's offerings were the most representative of a new conceptual approach to design that seems to be emerging. Their lamps were functional but also thought-provoking and humorous. What more could one want from the stuff that surrounds us?

PART 4

Questions 18–28

Read the following text for questions 18-28.

SEA MONSTERS

Sea monsters are the stuff of legend – lurking not just in the depths of the oceans, but also the darker corners of our minds. What is it that draws us to these creatures?

"This inhuman place makes human monsters," wrote Stephen King in his novel The Shining. Many academics agree that monsters lurk in the deepest recesses, they prowl through our ancestral minds appearing in the half-light, under the bed – or at the bottom of the sea.

"They don't really exist, but they play a huge role in our mindscapes, in our dreams, stories, nightmares, myths and so on," says Matthias Classen, assistant professor of literature and media at Aarhus University in Denmark, who studies monsters in literature. "Monsters say something about human psychology, not the world."

One Norse legend talks of the Kraken, a deep sea creature that was the curse of fishermen. If sailors found a place with many fish, most likely it was the monster that was driving them to the surface. If it saw the ship it would pluck the hapless sailors from the boat and drag them to a watery grave.

This terrifying legend occupied the mind and pen of the poet Alfred Lord Tennyson too. In his short 1830 poem The Kraken he wrote: "Below the thunders of the upper deep, / Far far beneath in the abysmal sea, / His ancient, dreamless, uninvaded sleep / The Kraken sleepeth."

The deeper we travel into the ocean, the deeper we delve into our own psyche. And when we can go no further – there lurks the Kraken.

Most likely the Kraken is based on a real creature – the giant squid. The huge mollusc takes pride of place as the personification of the terrors of the deep sea. Sailors would have encountered it at the surface, dying, and probably thrashing about. It would have made a weird sight, "about the most alien thing you can imagine," says Edith Widder, CEO at the Ocean Research and Conservation Association.

"It has eight lashing arms and two slashing tentacles growing straight out of its head and it's got serrated suckers that can latch on to the slimiest of prey and it's got a parrot beak that can rip flesh. It's got an eye the size of your head, it's got a jet propulsion system and three hearts that pump blue blood."

The giant squid continued to dominate stories of sea monsters with the famous 1870 novel, Twenty Thousand Leagues Under the Sea, by Jules Verne. Verne's submarine fantasy is a classic story of puny man against a gigantic squid.

The monster needed no embellishment – this creature was scary enough, and Verne incorporated as much fact as possible into the story, says Emily Alder from Edinburgh Napier University. "Twenty Thousand Leagues Under the Sea and another contemporaneous book, Victor Hugo's Toilers of the Sea, both tried to represent the giant squid as they might have been actual zoological animals, much more taking the squid as a biological creature than a mythical creature." It was a given that the squid was vicious and would readily attack humans given the chance.

That myth wasn't busted until 2012, when Edith Widder and her colleagues were the first people to successfully film giant squid under water and see first-hand the true character of the monster of the deep. They realised previous attempts to film squid had failed because the bright lights and noisy thrusters on submersibles had frightened them away.

By quietening down the engines and using bioluminescence to attract it, they managed to see this most extraordinary animal in its natural habitat. It serenely glided into view, its body rippled with metallic colours of bronze and silver. Its huge, intelligent eye watched the submarine warily as it delicately picked at the bait with its beak. It was balletic and mesmeric. It could not have been further from the gnashing, human-destroying creature of myth and literature. In reality this is a gentle giant that is easily scared and pecks at its food.

Another giant squid lies peacefully in the Natural History Museum in London, in the Spirit Room, where it is preserved in a huge glass case. In 2004 it was caught in a fishing net off the Falkland Islands and died at the surface. The crew immediately froze its body and it was sent to be preserved in the museum by the Curator of Molluscs, Jon Ablett. It is called Archie, an affectionate short version of its Latin name Architeuthis dux. It is the longest preserved specimen of a giant squid in the world.

Do the following statements agree with the information given? Choose the correct letter, A, B, C or D.

18 **Matthias Classen is unsure about the possibility of monster's existence**
A) True
B) False
C) Not Given

19 **Kraken is probably based on an imaginary animal**
A) True
B) False
C) Not Given

20 **Previous attempts on filming the squid had failed due to the fact that the creature was scared**
A) True
B) False
C) Not Given

21 **Giant squid was caught alive in 2004 and brought to the museum**
A) True
B) False
C) Not Given

22 **Jon Ablett admits that he likes Archie**
A) True
B) False
C) Not Given

23 **According to Classen, people can be scared both by imaginary and real monsters**
A) True
B) False
C) Not Given

24 **Werner Herzog suggests that Kraken is essential to the ocean**
A) True
B) False
C) Not Given

Choose the correct letter A, B, C or D.

25 **Who wrote a novel about a giant squid?**
A) Emily Alder
B) Stephen King
C) Alfred Lord Tennyson
D) Jules Verne

26 **What, of the featuring body parts, mollusc DOESN'T have?**
A) two tentacles
B) serrated suckers
C) beak
D) smooth suckers

27 **Which of the following applies to the bookish Kraken?**
A) notorious
B) scary
C) weird
D) harmless

28 **Where can we see a giant squid?**

A) at the museum
B) at a seaside
C) on TV
D) in supermarkets

PART 5 Questions 29–35

Read the text below and answer Questions 29-35.

THE END OF THE IPO

Not long ago, if you were a young, brash technologist with a world-conquering start-up idea, there was a good chance you spent much of your waking life working toward a single business milestone: taking your company public.

Though luminaries of the tech industry have always expressed skepticism and even hostility toward the finance industry, tech's dirty secret was that it looked to Wall Street and the ritual of a public offering for affirmation — not to mention wealth.

The delay in I.P.O.s has altered how some venture capital firms do business. Rather than waiting for an initial offering, Maveron, for instance, says it now sells its stake in a start-up to other, larger private investors once it has made about 100 times its initial investment. It is the sort of return that was once only possible after an I.P.O.

But there is also a downside to the new aversion to initial offerings. When the unicorns do eventually go public and begin to soar — or whatever it is that fantastical horned beasts tend to do when they're healthy — the biggest winners will be the private investors that are now bearing most of the risk.

It used to be that public investors who got in on the ground floor of an initial offering could earn historic gains. If you invested $1,000 in Amazon at its I.P.O. in 1997, you would now have nearly $250,000. If you had invested $1,000 in Microsoft in 1986, you would have close to half a million. Public investors today are unlikely to get anywhere near such gains from tech I.P.O.s. By the time tech companies come to the market, the biggest gains have already been extracted by private backers.

Just 53 technology companies went public in 2014, which is around the median since 1980, but far fewer than during the boom of the late 1990s and 2000, when hundreds of tech companies went public annually, according to statistics maintained by Jay Ritter, a professor of finance at the University of Florida.

Initial public offerings were also ways to compensate employees and founders who owned lots of stock, but there are now novel mechanisms — such as selling shares on a secondary market — for insiders to cash in on some of their shares in private companies. Still, some observers cautioned that the new trend may be a bad deal for employees who aren't given much information about the company's performance.

If the delay in I.P.O.s becomes a normal condition for Silicon Valley, some observers say tech companies may need to consider new forms of compensation for workers. "We probably need to fundamentally rethink how do private companies compensate employees, because that's going to be an issue," said Mr. Kupor, of Andreessen Horowitz.

If the private investors are wrong, employees, founders and a lot of hedge funds could be in for a reckoning. But if they're right, it will be you and me wearing the frown — the public investors who missed out on the next big thing.

Choose the correct letter, A, B, C or D.

29 **How much funds would you gain by now, if you had invested 1000$ in the Amazon in 1997?**

A) 250,000$
B) close to 500,000$
C) It is not stated in the text
D) No funds

30 **In which time period was the biggest number of companies going public?**

A) early 1990s
B) late 1900s and 2000s
C) 1980s
D) late 1990s

Complete the sentences below. Write ONLY ONE WORD from the passage for each answer.

SENTENCE COMPLETION

Skepticism was always expected by the **31** _____ of tech industry.

The new aversion to initial offerings has its **32** _____.

Selling shares on a secondary market is considered a **33** _____ mechanism.

Workers' compensation might be an **34** _____

The public investors who failed to participate in the next big thing might be the ones wearing the **35** _____.

MOCK TEST 27

📖 READING

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–8

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

CAN ARMADILLOS SHOW US HOW TO REGROW A LIVER?

What if we could make our **Q1**_____'s old or sick cells act young again? Surprisingly, the **Q2**_____ that cause leprosy may show us how. Previously, we discovered that infecting cells with leprosy bacteria in a laboratory dish "reprogrammed" the cells back to an **Q3**_____ state. The cells may then be able to produce many different types of **Q4**_____ in the body – and maybe even regenerate an organ.

To test this in an actual animal, we infected nine-banded **Q5**_____ with **Q6**_____ bacteria. We compared their livers to the livers of uninfected armadillos. The livers of armadillos infected with leprosy were larger than those of uninfected armadillos. Importantly, these larger **Q7**_____ were healthy, with no signs of damage. We performed genetic analyses on the liver cells to determine which genes were active. Our results show that leprosy infection "reprograms" adult liver cells to make them resemble immature **Q8**_____ cells. Maybe someday we can adapt this natural process to regrow aging and damaged livers in humans.

PART 2

Questions 9–15

Look at the four reviews of smartphone fitness apps, A-D. For which app are the following statements true? Write the correct letter, A-D. You may use any letter more than once.

A) Pacer — Although they were previously split into 'pro' and 'free' versions, Pacer's developer now generously includes all the features in one free app. That means you can spend no money, yet use your smartphone's GPS capabilities to track your jogging routes, and examine details of your pace and calories burned.

B) Beat2 — There is a wealth of running apps available, but Beat2 is a good one. This free app monitors your pace – or if you have a wrist or chest-based heart rate monitor, your beats per minute – and offers up its specially curated playlists to give you the perfect music for the pace you're running at, adding a whole new dimension to your run. The best bit is when you explode into a sprint and the music pounds in your ears. Or if you fancy something different, the app also has In-App Purchases, including tales of past sporting heroes you can listen to while you run.

C) Impel — If you're serious about the sport you do, then you should be serious about Impel. As smartphone fitness tools go it's one of the best, allowing you to track your performance, set goals and see daily progress updates. If you're ever not sure where to run or cycle you can find user-created routes on the app, or share your own. All of that comes free of charge, while a premium version adds even more tools.

D) Fast Track — There are plenty of GPS running apps for smartphones, but Fast Track is an excellent freebie. Although you naturally get more features if you pay for the 'pro' version, the free release gets you GPS tracking, a nicely designed map view, your training history, music, and cheering. Yes, you read the last of those right – you can have friends cheer you on as you huff and puff during a run. If you can afford the 'pro' version, you can add possible routes, voice coaches, smartwatch connectivity and more; but as a starting point, the free app gets you moving.

9 **Q9**
This app can be used for more than one sport.

10 **Q10**
You have to pay if you want this app to suggest where you can go.

11 **Q11**
This app has well-presented visuals.

12 **Q12**
You do not have to pay for any of the features on this app.

13 **Q13**
You can pay to download true stories on this app.

14 **Q14**
You can get ideas about where to go from other people on this app.

15 **Q15**
This app gives you details of the energy you have used.

PART 3

Questions 16–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

i) Limitations in Human Understanding
ii) Great Astronomers
iii) What should humans do if they got the signal from an alien civilization
iv) Project for searching for the aliens' signals
v) How telescope contributes for finding the signals of alien civilization
vi) How finding alien civilization can help humans
vii) Ground rules of SETI scientists

16. Paragraph A **17. Paragraph B** **18. Paragraph C**
19. Paragraph D **20. Paragraph E**

IS THERE ANYBODY OUT THERE? – THE SEARCH FOR EXTRA-TERRESTRIAL INTELLIGENCE

A. Our basic curiosity is being the fundamental reason for human search. This same curiosity about the natural world drives all pure science. We are curious about whether we are alone in the universe. We are having a drive to know if the right conditions are enough to bring out life or is there anything special about earth which fostered a variety of life forms that we are seeing around us. The simple detection of radio signals is enough to satisfy our curiosity. In this way, we can say that SETI is part of the pure science machinery which is continually expanding the horizons of knowledge. There are other reasons also why we are inquiring whether life exists elsewhere. For example, Civilization on earth started only about a few thousand years ago only but our survival disturbed because of pollution and nuclear war that has happened over the last few decades. Can we survive for a few more years or we'll be dead. The lifetime of a planet is about several billion years. If any other civilization survived in our galaxy, then their ages will range from zero to several billion years. We'll have a positive note just by knowing the existence of such civilizations as proof of long-term survival is possible. We might also gain some lessons on how to tackle the threats like nuclear war or global pollution and the threat that we have not encountered as of now, from the experience of older civilization.

B. Most SETI scientists have two ground rules, in the discussion of whether we are alone in the universe. First, most of the scientists ignore UFOs (Unidentified Flying Objects) as they don't have strong evidence, which can be considered seriously. It is still important to have an open mind since any convincing evidence could emerge in future. Second, we have a conservative belief that we are looking for a life form which is similar to ours, so it is difficult to recognize the life form as a life form if it does not resemble us. To put it another way, the life form we are looking for might have blue heads and five legs, still, it nevertheless has similarities to us in that it must communicate with its fellows. It could be interested in the universe, living in a planet orbiting a star like our Sun, and likely it has chemistry based on carbon and water.

C. Though we are making these sorts of assumptions, we have a limited understanding about other life forms. For example, we are lacking knowledge about how many stars have planets or how likely life arises naturally, given the appropriate conditions. When we look at the 100 billion stars in our galaxy and 100 billion galaxies, it is impossible to believe that at least one of the planets does not have a life form on it. Guessing based on our limited knowledge about the conditions for carbon-based life, we can estimate that probably one in 100,000 stars might have a life-bearing planet orbiting it. Perhaps, our nearest neighbour could be a thousand light years away. It is almost like a next door in astronomical terms.

D. An alien civilization could send information by using a variety of ways, across the galaxy. But, either it requires too much energy to send the information or it could be disturbed while travelling through the vast distances across the galaxy. In the frequency range of 1000 to 3000 MHz, radio waves travel the greatest distance. To date, All searches have focused on looking for radio waves in this frequency range. For now, there have been a number of searches done by various groups, like Australian searches using the radio telescope at Parkes, New South Wales. Still now, nothing is detected from the few hundred stars which have been searched. Since 1992, the scale of searches has increased tremendously, as the US Congress voted NASA $10 million per year for ten years to perform a thorough search for extra-terrestrial life. For this project, a lot of money is being spent on developing the special hardware required to search multiple frequencies at the same time. The project constitutes two parts. First part is a targeted search by the means of world's largest radio telescopes. The American operated telescope in Arecibo and the French telescope in France. This part of the project is searching for the signals in the frequency range of 1000 to 3000 MHz, in the nearest 1000 stars. The second part of the project is an undirected search which monitors all of the space with a lower one using the NASA Deep Space Network's smaller antennas.

E. There is a substantial amount of debate happening based on how we must react if we detect a signal from an alien civilization. Everyone agrees that we must not respond immediately. Even if it is not possible to send a reply for a long distance at short notice, there are ethical questions emerging that should be addressed by the global community before sending the reply. Is it that we face a cultural shock if we encounter a superior and much older civilization? Fortunately, there is no urgency about this. We are searching for stars which are hundreds of light years away. So, it takes hundreds of years of time for their signal to reach us. And, it will take a further few hundred years for our reply to reach them. Therefore, it is not important whether there is a delay of a few years or decades, while the human race debates about whether to reply to them or perhaps draft a reply carefully.

PART 4

Questions 21–27

Read the following text for questions 21-27.

IS SCIENCE DANGEROUS?

Wolpert, Lewis. "Is science dangerous?." Journal of molecular biology 319.4 (2002): 969-972.

The idea that scientific knowledge is dangerous is deeply embedded in our culture. Adam and Eve were forbidden to eat

from the Tree of Knowledge, and in Milton's Paradise Lost the serpent addresses the tree as the 'Mother of Science'. Indeed the whole of western literature has not been kind to scientists and is filled with images of them meddling with nature with disastrous results. Just consider Shelley's Frankenstein, Goethe's Faust and Huxley's Brave New World. One will search with very little success for a novel in which scientists come out well – the persistent image is that of scientists as a soulless group unconcerned with ethical issues. And where is there a film sympathetic to science?

Part of the problem is the conflation of science and technology. The distinction between science and technology, between knowledge and understanding on the one hand and the application of that knowledge to making something, or using it in some practical way, is fundamental.

Science produces ideas about how the world works, whereas the ideas in technology result in usable objects. Technology is much older than anything one could regard as science and unaided by any science. Technology gave rise to the crafts of early humans, like agriculture and metalworking. It is technology that carries with it ethical issues, from motorcar production to cloning a human.

By contrast, reliable scientific knowledge is value-free and has no moral or ethical value. Science merely tells us how the world is. That we are not at the centre of the universe is neither good nor bad, nor is the possibility that genes can influence our intelligence or our behaviour.

The social obligations that scientists have as distinct from those responsibilities they share with all citizens comes from them having access to specialised knowledge of how the world works, not easily accessible to others. Their obligation is to both make public any social implications of their work and its possible applications and to give some assessment of its reliability.

It is not easy to find examples of scientists as a group behaving immorally or in a dangerous manner, the classic paradigm being the eugenics movement. The scientific assumptions behind this proposal are crucial; the assumption is that most desirable and undesirable human attributes are inherited. Not only was talent perceived of as being inherited, but so too were insanity and any kind of so-called feeblemindedness. They completely failed to give an assessment of the reliability of their ideas. Quite the contrary, and even more blameworthy, their conclusions seem to have been driven by what they saw as the desirable social implications. By contrast, in relation to the building of the atomic bomb, scientists behaved morally and fulfilled their social obligations by informing their governments about the implications of atomic theory. It was an enormous engineering feat to build the bomb but the decision to do this was taken by politicians, not scientists.

The moralists have been out in force telling us of the horrors of cloning. Many others, national leaders included, have joined in a chorus of horror. But what horrors? What ethical issues? In all the righteous indignation not a single relevant new ethical issue has been spelled out.

Those who propose to clone a human are medical technologists not scientists. It is not, as the bio-moralists claim, that scientific innovation has outstripped our social and moral codes. Just the opposite is the case. Their obsession with the life of the embryo has deflected our attention away from the real issue, which is how children are raised and nurtured. The ills in our society have nothing to do with assisting or preventing reproduction but are profoundly affected by how children are treated.

So what danger does genetics pose? Gene therapy, introducing genes to cure a genetic disease like cystic fibrosis, carries risks, as do all new medical treatments. There may well be problems with the testing of new treatments, but are these difficulties any different from those related to trying out new drugs for AIDS? Anxieties about creating designer babies are at present premature as it is too risky, and we may have, in the first instance, to accept what has been called procreative autonomy, a couple's right to control their own role in reproduction unless the state has a compelling reason for denying them that control. Should the ethical issues relating to the applications of genetics, for example, lead to stopping research in this field? The individual scientist cannot decide, for science, like genetics, is a collective activity with no single individual controlling the process of discovery. It is ethically unacceptable and impractical to censor any aspect of trying to understand the nature of our world.

Do the following statements agree with the information given in the Reading Passage?

21 **The film industry does not make films about science.**
A) True
B) False
C) Not Given

22 **Scientists do not work in unison when deciding what needs to be researched.**
A) True
B) False
C) Not Given

23 **Parents want to have cloned children now.**
A) True
B) False
C) Not Given

24 **Technology was important before the development of science.**
A) True
B) False
C) Not Given

25 **Many people consider cloning to be undesirable.**
A) True
B) False
C) Not Given

26 **Science and Technology must be seen as separate entities.**
A) True
B) False
C) Not Given

Choose the correct letter, A, B, C or D.

27 **According to the writer, Science shows us**
A) our position in the universe.
B) how intelligence affects our behavior.
C) what the world is really like.
D) scientists have special social obligations.

PART 5 Questions 28–35

Read the text below and answer Questions 28-35.

HOW TO RUN A SUCCESSFUL PROJECT

A project manager's main task is to bring a particular project to completion, both on time and within budget. There are many factors that can cause a project to veer off its tracks, but steps can be taken to ensure that your project experiences as little disruption as possible.

1 Prepare the framework

If you get everything down in writing at the beginning of the project, you have an excellent foundation to build upon. Change is inevitable, but you have to maintain control. This is critical to avoid problems of 'scope creep', which is when the company paying for the project asks for 'just one more little thing' repeatedly, until the project becomes unmanageable.

2 Select the team

Gather your human resources, and make sure that their skills align with their roles. This is an important first step: if you assign the wrong person to a task, you are reducing your chances of success.

Make sure each team member is clear on what is expected from them and when. Encourage them to ask questions to clarify anything that may be uncertain, and to always come to you whenever something seems to be out of place or going wrong. Clear communication is critical.

Make sure the whole team and the client company grasp the project's limitations in terms of its achievable outcomes. You can finish a task successfully and on time as long as expectations are reasonable.

3 Staying on track

How can you know if your project is going to be successful if you don't have any way of measuring success? You will need interim milestones, especially for a long-term project, so that you can determine if you are staying on track or straying from the project's goals.

4 Manage project risks

Hopefully you have defined the more likely risks up front during the protect preparation, so you should now put contingency plans in place for certain occurrences. If you can see when a risk is imminent, you can take preventive action to avoid it, but be ready to halt a project if the risk becomes unacceptable.

5 Evaluate the project

Once a project has been completed, it's important to write a report, even if it is only for internal purposes. You can pinpoint what went right or wrong, determine what could have been done differently, and establish the best practices for use in future undertakings.

Complete the flow-chart below. Choose NO MORE THAN TWO WORDS from the text for each answer.

HOW TO RUN A SUCCESSFUL PROJECT

Bear in mind that your aim should be to keep to both the agreed deadline and the **28** _____ for the project.

↓

Fix the details at the start to prevent what is called **29** _____ – the client asking for more and more.

↓

Choose the team members wisely so that their **30** _____ match the duties you want them to take on.

↓

Promote good **31** _____ at all times so everyone knows what you require of them.

↓

Make sure **32** _____ are set so you can check whether the **33** _____ is running to schedule.

↓

Prepare **34** _____ which can be activated if things go wrong on the project.

↓

Once the project is over, produce a **35** _____ outlining its strengths and weaknesses for future reference.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

VIETNAM

After World War II, America did what it could to stop the spread of communism across the globe. The Cold War continued as America tried to **Q1**_____ the Soviet Union's continuous effort to take over noncommunist countries. The country of Vietnam became part of the struggle between the two powerful nations. The Vietnam War was, in part, a result of America's fear of Soviet occupation and the spread of **Q2**_____. In 1964, President Johnson asked Congress to agree to take whatever measures were necessary to stop attacks against the United States' forces. The request came about as a result of reports that North Vietnamese gunboats had fired at destroyers owned by the United States. President Johnson was given the green light to do what was **Q3**_____ to stop military aggression by North Vietnamese troops. By 1968, there were more than 500,000 American soldiers in **Q4**_____ The country had mixed emotions about America's involvement with Vietnam. Some felt the U.S. had to protect South Vietnam. They believed if one country fell to communism, then others would quickly follow. **Q5**_____ wanted Americans removed from Vietnam as **Q6**_____ as possible. The Vietnam War finally ended in 1973 with Vietnam still divided.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) Stephen is looking for a top-quality hotel which is convenient for the airport, to hold a meeting with visiting German publishers. They will stay overnight and want to take some exercise outdoors after the meeting.

B) Karl and Monika want to stay in the city centre at a hotel offering good local food. The next morning they plan to see the main sights. They are not worried about the cost of the hotel.

C) James and Denise want a modern, medium-priced hotel in the city, but will eat out during their stay. They also want to see some films in the evenings, somewhere near their hotel.

D) Cristina wants to visit a museum with her daughter to see how people used to live. They want to have lunch there and buy some presents to take home. They will go by car.

E) David and Katrina have just started work after leaving college and haven't got much money, so they want a reasonably priced hotel. They like country walks and watersports.

F) Joanna wants to visit a museum hotel and see people making things. She has no car and would like to have lunch there.

G) Sue and Belinda want to stay somewhere in the city centre that offers a variety of evening entertainment within the hotel, including live music.

H) Carl's hobby is painting pictures, so he would like to see the work of other painters who live in the area. He wants to have a snack at the museum. He travels by public transport.

I) Duncan wants to find out where local people worked in the past and what they did in their spare time. He wants to buy a book about the exhibition. He travels by bus.

J) The Cannavaro family want to walk around a site which offers opportunities for the whole family to take part in activities. They want somewhere pleasant to eat their own sandwiches. They have a car.

7

The Russell Hotel

The Russell Hotel is close to the airport, and has quiet, comfortable rooms. However, the journey to the city centre can take time, and prices are above average. Delicious local food is served in the restaurant, and its conference rooms and business facilities are excellent. The hotel is surrounded by woodland, offers a golf course, and there are pleasant walks around the nearby lake.

8

The Cumberland Hotel

The Cumberland Hotel is well placed for sightseeing on a busy city street, in a district which is full of interesting shops. Rooms are expensive but comfortable and the hotel serves excellent food, typical of the area. A piano player entertains guests every night in the bar.

9

The Aviemore Hotel

The newly-built Aviemore Hotel is small but in the centre of the city's cinema, restaurant and nightclub district. Rooms are clean, comfortable and reasonably priced, although the food is rather basic. There is an electronic games arcade in the hotel.

10

The Westmore Hotel

The Westmore Hotel is in beautiful countryside to the east of the city. It is peaceful and inexpensive, although the accommodation is basic. There are opportunities nearby for sailing and diving, and a lot of interesting routes to explore on foot.

11

Scotwood Manor

The rooms in Scotwood Manor are furnished as they were 100 years ago. The staff spend the day as people did then and are happy to explain what it was like. There are activity sheets for children and a shop with books, souvenirs and cards, as well as a good café and car park.

12

Fairley Museum

Fairley Museum is arranged like an old-fashioned village. You can see people working at their trades to produce tools, pots and even boats using traditional skills. There is a small picnic area in the car park but most people eat in the excellent café. The museum is on a bus route.

13

Westerleigh Museum

Westerleigh Museum is near the bus station, and contains exhibitions showing the town's development. In a separate room there are works by some well-known artists as well as changing exhibitions of work by local artists. Sandwiches, cakes and hot drinks are on sale in the café.

14

Charberth Museum

Charberth Museum is near the main bus station and has a rich collection of objects, 19th-century paintings and photographs showing life in the town over the centuries – the jobs people did and how they entertained themselves. An accompanying book showing the works on display is available from the Museum Shop as well as some attractive gifts. There is no café.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Town
B) Colonisation
C) Urban devision
D) Architectural home styles
E) Types of settlements
F) Historical foundations
G) Domestic arrangements
H) The residences of rulers

15. Paragraph A **16. Paragraph B** **17. Paragraph C**
18. Paragraph D **19. Paragraph E** **20. Paragraph F**

YORUBA TOWN

A. The Yoruba people of Nigeria classify their towns in two ways. Permanent towns with their own governments are called "ilu", whereas temporary settlements, set up to support work in the country are "aba". Although ilu tend to be larger than aba, the distinction is not one of size, some aba are large, while declining ilu can be small, but of purpose. There is no "typical" Yoruba town, but some features are common to most towns.

B. In the 19th century most towns were heavily fortified and the foundations of these walls are sometimes visible. Collecting tolls to enter and exit through the walls was a major source of revenue for the old town rulers, as were market fees. The markets were generally located centrally and in small towns, while in large towns there were permanent stands made of corrugated iron or concrete. The market was usually next to the local ruler's palace.

C. The palaces were often very large. In the 1930's, the area of Oyo's palace covered 17 acres, and consisted of a series of courtyards surrounded by private and public rooms. After colonisation, many of the palaces were completely or partially demolished. Often the rulers built two storey houses for themselves using some of the palace grounds for government buildings.

D. The town is divided into different sections. In some towns these are regular, extending out from the center of the town like spokes on a wheel, while in others, where space is limited, they are more random. The different areas are further divided into compounds called "ile". These vary in size considerably from single dwellings to up to thirty houses. They tend to be larger in the North. Large areas are devoted to government administrative buildings. Newer developments such as industrial or commercial areas or apartment housing for civil servants tends to be build on the edge of the town.

E. Houses are rectangular and either have a courtyard in the center or the rooms come off a central corridor. Most social life occurs in the courtyard. They are usually built of hardened mud and have roofs of corrugated iron or, in the countryside, thatch. Buildings of this material are easy to alter, either by knocking down rooms or adding new ones. And can be improved by coating the walls with cement. Richer people often build their houses of concrete blocks and, if they can afford to, build two storey houses. Within compounds there can be quite a mixture of building types. Younger well-educated people may have well-furnished houses while their older relatives live in mud walled buildings and sleep on mats on the floor.

F. The builder or the most senior man gets a room either near the entrance or, in a two storied house, next to the balcony. He usually has more than one room. Junior men get a room each and there are separate rooms for teenage boys and girls to sleep in. Younger children sleep with their mothers. Any empty room are used as storage, let out or, if they face the street, used as shops.

PART 4

Questions 21–29

Read the following text and choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

ACTIVITIES FOR CHILDREN

A. Twenty-five years ago, children in London walked to school and played in parks and playing fields after school and at the weekend. Today they are usually driven to school by parents anxious about safety and spend hours glued to television screens or computer games. Meanwhile, community playing fields are being sold off to property developers at an alarming

rate. "This change in lifestyle has, sadly, meant greater restrictions on children," says Neil Armstrong, Professor of Health and Exercise Sciences at the University of Exeter. "If children continue to be this inactive, they'll be storing up big problems for the future."

B. In 1985, Professor Armstrong headed a five-year research project into children's fitness. The results, published in 1990, were alarming. The survey, which monitored 700 11-16-year-olds, found that 48 per cent of girls and 41 per cent of boys already exceeded safe cholesterol levels set for children by the American Heart Foundation. Armstrong adds, "Heart is a muscle and need exercise, or it loses its strength." It also found that 13 per cent of boys and 10 percent of girls were overweight. More disturbingly, the survey found that over a four-day period, half the girls and one-third of the boys did less exercise than the equivalent of a brisk 10-minute walk. High levels of cholesterol excess body fat and inactivity are believed to increase the risk of coronary heart disease.

C. Physical education is under pressure in the UK – most schools devote little more than 100 minutes a week to it in curriculum time, which is less than many other European countries. Three European countries are giving children a head start in PE. France, Austria and Switzerland – offer at least two hours in primary and secondary schools. These findings, from the European Union of Physical Education Associations, prompted specialists in children's physiology to call on European governments to give youngsters a daily PE programme. The survey shows that the UK ranks 13th out of the 25 countries, with Ireland bottom, averaging under an hour a week for PE. From age six to 18 British children received, on average, 106 minutes of PE a week. Professor Armstrong, who presented the findings at the meeting, noted that since the introduction of the national curriculum there had been a marked fall in the time devoted to PE in UK schools, with only a minority of pupils getting two hours a week.

D. As a former junior football international, Professor Armstrong is a passionate advocate for sport. Although the Government has poured millions into beefing up sport in the community, there is less commitment to it as part of the cramped school curriculum. This means that many children never acquire the necessary skills to thrive in team games. If they are no good at them, they lose interest and establish an inactive pattern of behaviour. When this is coupled with a poor diet, it will lead inevitably to weight gain. Seventy per cent of British children give up all sport when they leave school, compared with only 20 per cent of French teenagers. Professor Armstrong believes that there is far too great an emphasis on team games at school. "We need to look at the time devoted to PE and balance it between individual and pair activities, such as aerobics and badminton, as well as team sports. "He added that children need to have the opportunity to take part in a wide variety of individual, partner and team sports.

E. The good news, however, is that a few small companies and children's activity groups have reacted positively and creatively to the problem. Take That, shouts Gloria Thomas, striking a disco pose astride her mini space hopper. Take That, echo a flock of toddlers, adopting outrageous postures astride their space hoppers. "Michael Jackson," she shouts, and they all do a spoof fan-crazed shriek. During the wild and chaotic hopper race across the studio floor, commands like this are issued and responded to with untrammelled glee. The sight of 15 bouncing seven-year-olds who seem about to launch into orbit at every bounce brings tears to the eyes. Uncoordinated, loud, excited and emotional, children provide raw comedy.

F. Any cardiovascular exercise is a good option, and it doesn't necessarily have to be high intensity. It can be anything that gets your heart rate up: such as walking the dog, swimming, miming, skipping, hiking. "Even walking through the grocery store can be exercise," Samis-Smith said. What they don't know is that they're at a Fit Kids class, and that the fun is a disguise for the serious exercise plan they're covertly being taken through. Fit Kids trains parents to run fitness classes for children. "Ninety per cent of children don't like team sports," says company director, Gillian Gale.

G. A Prevention survey found that children whose parents keep in shape are much more likely to have healthy body weights themselves. "There's nothing worse than telling a child what he needs to do and not doing it yourself," says Elizabeth Ward, R.D., a Boston nutritional consultant and author of Healthy Foods, Healthy Kids. "Set a good example and get your nutritional house in order first." In the 1930s and '40s, kids expended 800 calories a day just walking, carrying water, and doing other chores, notes Fima Lifshitz, M.D., a pediatric endocrinologist in Santa Barbara. "Now, kids in obese families are expending only 200 calories a day in physical activity," says Lifshitz. "Incorporate more movement in your family's life: park farther away from the stores at the mall, take stairs instead of the elevator, and walk to nearby friends' houses instead of driving."

Choose the correct letter A, B, C or D.

21 **According to paragraph C, what does Professor Neil Armstrong concern about?**

A) Spending more time on TV affect academic level
B) Parents have less time stay with their children
C) The amount of P.E lessons in various countries
D) Increasing speed of property's development

22 **What does Armstrong indicate in Paragraph B?**

A) We need to take a 10 minute walk everyday
B) We should do more activity to exercise heart
C) Girls' situation is better than boys
D) Exercise can cure many disease

23 **What is aim of Fit Kids' training?**

A) Make profit by running several sessions
B) Only concentrate on one activity for each child
C) To guide parents how to organize activities for children
D) Spread the idea that team sport is better

24 **What did Lifshitz suggest in the end of this passage?**

A) Create opportunities to exercise your body
B) Taking elevator saves your time
C) Kids should spend more than 200 calories each day
D) We should never drive but walk

For questions 25-29, decide if the following statements agree with the information given in the text.

25 **According to Neil Armstrong inactive children may have problem in the future.**

A) True
B) False
C) Not Given

26 **According to Neil Armstrong 40 percent of girls suffer from obesity.**

A) True
B) False
C) Not Given

27 **Majority of children never have enough essential skills for team games.**

A) True
B) False
C) Not Given

28 **Thin children never complain about their health and eyesight.**

A) True
B) False
C) Not Given

29 **Riding a bicycle on regular basis is sometimes harmful for heart.**

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

PARENTING IN THE 21ST CENTURY

I decided to write this book for several reasons. I was dissatisfied with parenting-advice literature, finding it to be riddled with oversimplified messages, and often unrelated to or at odds with current scientific knowledge. I also felt certain after years as a professor, researcher, and author of textbooks on child development, that contemporary theory and research contain many vital, practical messages...ones crucial for parents to understand if they are to effectively help their children develop. Furthermore, I've been approached on countless occasions by uneasy parents, frustrated by a wide array of child-rearing issues. I became convinced, therefore, that parents needed a consistent way of thinking about their role to guide them in making effective decisions.

It's little wonder that parents are perplexed about what approach to take to child rearing. Today's world is one which makes parenting exceedingly difficult. In many industrialised countries, the majority of mothers of preschool children are in the workforce, though not always through choice. This group in particular tends to lament the lack of practical advice for parents in their child-rearing roles. Many parents simultaneously complain that they're busier than ever and that due to the growing demands of their jobs, they have little time for their children. Nations of pressured, preoccupied parents have emerged in an era of grave public concern for the well-being of youth.

It would seem from looking at current media that the younger generation are achieving less well than they should and that they often display a worrying lack of direction, manifested at its worst in a variety of social problems. These problems seem to have infiltrated even the most economically privileged sectors of the population, affecting young people who, on the face of things, have been granted the best of life's chances. Accounts of children being deprived of their childhood and growing up too fast, or the dangers of promoting materialism to young people abound in the media.

In many countries there is a growing sense of 'youth alienation' and parents rightly fear for their own children's futures. But agreement on what parents can and should do to shield children from underachievement and demoralisation eludes those who seek it on the shelves of libraries or bookstores. Parenting advice has always been in a state of flux, at no time more so than the present. While the fundamental goal of parenting – to instil character and moral development – has stood firm amid the various passing fashions in child care over the years, the approach to accomplishing this has varied considerably. Some authors, convinced that parents are in control of what their children become, advise a 'get tough' approach. The educational parallel to this 'parent-power' stance is to train and instruct as early as possible, and this has been justified by claims of maximising brain growth or securing high achievement by starting sooner.

Other authors, however, attribute many of today's social problems to the excessive pressure put on children by parents. According to these 'child-power' advocates, children have their own built-in timetables for maturing and learning. Waiting for cues that children are ready, these experts say, will relieve the stress that fuels youth discontent and rebellion. The reality, however, is that there are no hard-and-fast rules. Current thinking on child-rearing advice mirrors historical shifts in theories of development and education. The most disturbing trend in the literature has been a move to deny that parents make any notable contribution to their children's development. Indeed, according to one highly publicised book, children's genes, and secondarily their peer groups, not parents, dictate how children turn out. This public declaration of parental weakness comes at a time when many busy parents are poised to retreat from family obligations, and, indeed, it grants them licence to do so.

From the multitude of theories on nature and nurture, I have chosen one to serve as the framework for this book: sociocultural theory, which originated with the work of Russian psychologist Lev Vygotsky. Early in the 20th century, he explained how children's social experiences transform their genetic inheritance leading their development forward and ensuring that they become competent, contributing members of society. Vygotsky championed the idea that as children engage in dialogues with more expert members of their culture, they integrate the language of those interactions into their inner mental lives and use it to think, overcome challenges and guide their own behavior.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

PARENTING IN THE 21ST CENTURY – SUMMARY

Majority of parents from the **30** _____ states are obliged to work when their children are due to start school education. In some cases one can be surprised that parents are **31** _____ and they cannot decide which method to choose in order to teach their children some skills. According to the contemporary media the youth are not getting enough education this issues have almost **32** _____ some areas no matter to their good financial development. Recommendation of parents has always been changed soon more than currently. Their **33** _____ aim is to set some concepts which became stable over the past period.

Choose the correct letter A, B, C or D.

34 **What does the author say in the fourth paragraph about parenting advice?**

A) Its core objective has remained constant.
B) Its ideology stems from contemporary social issues.
C) It traditionally placed strong emphasis on the protection of the child.
D) It currently benefits from techniques tried and tested by previous generations.

35 **In the fifth paragraph, what point is the author making about bringing up children?**

A) There is an absence of consensus on child-rearing among the experts themselves.
B) Educational policies should be revised in the light of recent findings.
C) Strict parents tend to have children who are academically unsuccessful.
D) One approach to child-rearing appears to be more effective than all others.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

WATER HYACINTH

The water hyacinth grows in tropical countries. It has beautiful purple-blue flowers, but everybody hates it. Why?

Millions and millions of these plants **Q1**_____ in rivers and lakes. Sometimes the plants become so thick that people can walk on them. People cannot travel in boats on the water, and they cannot fish in it. The **Q2**_____ stop the water from moving. Then the water carries diseases. Farmers cannot use the water on their land.

Now scientists think that **Q3**_____ hyacinths can be useful. The plants are really a tree crop. No one has to take care of them. They just grow and grow and grow. What can **Q4**_____ use them for?

Some fish like to eat them. Farmers can grow these fish in the lakes and rivers. Workers can collect and cut the plants with machines. Then they can make fertilizer to make their crops grow better. They can also make feed for their farm animals. Maybe it will be possible to make methane gas for energy. (We burn gas from petroleum for energy. **Q5**_____ gas comes from plants.)

Then poor tropical countries will not have to buy so much expensive **Q6**_____. Maybe in the future people will love the water hyacinth instead of hating it.

PART 2

Questions 7–14

The people below all want to visit a museum. There are descriptions of museums. Decide which museum would be the most suitable for the following people.

7

Q7

Jake and Maureen have different interests but want to go somewhere they will both enjoy. Jake loves anything to do with the sea, while Maureen's interested in social history and the lives of women.

8

Q8

Melanie is a history teacher. She wants to take her class to a museum where they will be allowed to touch things and have activities to do during their visit.

9

Q9

Roger is keen to find out about different forms of transport in towns over the last hundred years. He would like to attend a talk while he is at the museum.

10

Q10

Kazuko studies English literature and thinks that seeing where writers lived will help her understand their books better. She finds it useful to look at pictures which are connected with the books.

11

Q11

Nick is more interested in learning about the countryside than learning about people from the past. He needs information for some schoolwork he is doing about what happens to rivers and hills over time.

12

Q12

Ingrid's eldest daughter is learning about English history and would like to go somewhere to bring this subject to life. Ingrid is really interested in flowers.

13

Q13

Trevor is an artist and enjoys drawing wildlife. He recently visited a zoo and drew large animals and would like to try sketching something smaller.

14

Q14

Sarah and her husband would like to spend the day outdoors. They don't like going on rides but are both interested in history and how people used to live.

A) Red House — Travel back to the time of the novelist Charlotte Brontë and find out about her friends and local connections. Discover the comforts and discomforts of the 1830s country home where Charlotte sometimes stayed as a guest of Joshua Taylor's family and got ideas for her novel Shirley.

B) Castle Museum — The castle was built looking down on the valley of the River Dean. It is now a museum, where you can learn how the valley has changed over millions of years. There is a collection of interesting rocks and fossils found in the area, and pictures showing how the valley probably looked in prehistoric times.

C) Hillcrest Museum — Enjoy an experience of digging up the past. Handle pieces of ancient pots, tools and other objects from many countries. Learn to date them and see what they tell us about how people lived then. Also try out computer programs which help plan the digging-up of sites. School groups should book in advance.

D) Shandy Hall — Here in the 1760s, Laurence Sterne wrote Tristram Shandy. His fifteenth-century house is now surrounded by a large garden full of beautiful and unusual plants. Inside there is an important collection of Sterne's novels plus the original drawings which were included in his works.

E) Museum of Peace — Situated in beautiful countryside, this is the only museum of its kind in the country. It has a growing collection of art and objects connected with peace history, non-violence and the ending of war. It also has material which can be used after the visit back in the classroom.

F) Fishing Centre — Study the routes used by fishermen over the last two hundred years and see how their ocean-going boats worked. A new exhibition explores the position of wives and mothers in the old fishing towns, giving information about their occupations, and their attitudes to work and home.

G) Viking Centre — Come and experience what life was like 1,200 years ago in this Viking town, rebuilt at the mouth of the river. Our introductory talk will inform you about the close relationship the Vikings had with the sea — they were excellent fishermen, sailors and boat-builders. There are also tools, clothes and everyday items to look at.

H) Horsepower Museum — This museum reminds us just how important horses were to life in the nineteenth and early twentieth centuries. It has a permanent exhibition of old trams and buses, which used to be pulled through the streets by horses. The staff here are very knowledgeable and give daily lectures on this fascinating collection.

I) Warwick Castle — Regarded by many as Britain's greatest Medieval Castle. Visit exhibitions, climb the castle towers, relax as you walk around the gardens, designed and created in 1753 by Capability Brown. Experience the preparations for battle in the Kingmaker exhibition or witness a Victorian Royal Weekend. And if your interest is more in the darker side of the Castle's history visit The Castle Dungeon.

J) Stratford Butterfly Farm — The biggest butterfly farm in Europe. Whatever the weather come and see these beautiful creatures as they would live in their natural environment. Walk around a tropical rainforest as butterflies fly freely around you. See them as they come into the world in the Caterpillar Room. And don't miss Insect City where you can view huge spiders and our very own scorpion colony!

K) Black Country Museum — It's been called Britain's friendliest open-air museum. Come to Black Country Museum and discover an old-fashioned village by the canal. Look around original old-fashioned shops and houses, see what it's like down a mine and take a ride on a tramcar.

L) Drayton Manor — One of the UK's most popular attractions. The park is home to some of the scariest rides you'll find like Stormforce 10 and Apocalypse, which has been voted the UK's most frightening ride. You'll also find an indoor and outdoor play area and of course, Drayton Manor Zoo with over one hundred different species, including twelve rare breeds from across the world.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Guard your time
B) Make a difference
C) Why it's so hard
D) Set a date
E) Get creative
F) Meet likeminded people
G) Change your life
H) Establish your goals
I) Do what you want
J) Plan ahead

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

MAKE MOST OF YOUR FREE TIME

1. Studies say that people nowadays have more free time than ever before. Then why doesn't it feel that way? These days, our free time is usually spent watching television, using computers or communicating on our phones. Images and information are constantly flashing into our brains, so it's no wonder we don't feel as if we have really switched off. To really wind down and help us regain our energy levels, it is important to use our free time wisely.

2. Don't let anything else encroach on your free time. Ignore the washing up and the vacuuming. Don't check your inbox for messages and turn off your mobile phone. Otherwise, the lines between free time and everyday live will begin to blur, and you won't feel refreshed.

3. In many free time activities, we take the role of consumer. When we watch TV, play video games or read, we are only passively involved. Take on the role of producer for a change. Build a model, write a blog or make an animation film. You will use a different part of your brains and will feel more energised as a result.

4. But don't go overboard. Many people worry too much about their free time activities. They want to do things that will impress their friends, look good on their résumés or help them get a better job. But free time isn't about that. It is about doing an activity for enjoyment's sake, so don't let outside pressures influence your choice.

5. You'll really know you're using your time wisely if what you're doing helps other people. So find out what's going on in the community and lend a hand. Visit the elderly or help out in a children's club. If socialising's not your thing, why not volunteer for a wildlife organisation?

6. Once you're relaxed and energised, you can think about what you'd like to improve in your life. Want to get fit? Learn a skill? Improve your job prospects? There are plenty of groups, clubs and classes you can join that will set you on a completely new life path. So what are you waiting for? Get out there and enjoy yourself!

PART 4 Questions 21–29

Read the following text for questions 21-29.

EL NINO AND SEABIRDS

A. Rhythm of the seasons cannot always be relied upon. At times the tropical Pacific Ocean and large expanses of the global atmosphere seem to be marching to the beat of a different drummer, disrupting the normal patterns of countless species of plants and animals along with hundreds of millions of human beings. So they want anticipate these occasional lapses in the march of the seasons and help societies plan accordingly, scientists are seeking to understand these competing rhythms: the strongest of which is the alternation between the "normal climate" and a different but still recurrent set of climatic conditions in the Pacific region called El Nino.

B. Seabirds are prominent and highly visible components of marine ecosystems that will be affected by global climate change. The Bering Sea region is particularly important to seabirds; populations there are larger and more diverse than in any similar region in North America—over 90% of seabirds breeding in the continental United States are found in this region. Seabirds, so named because they spend at least 80% of their lives at sea, are dependent upon marine resources for food. As prey availability changes in response to climatically driven factors such as surface sea temperature and extent of sea ice, so will populations of seabirds be affected.

C. Seabirds are valued as indicators of healthy marine ecosystems and provide a "vicarious use value" or existence value—people appreciate and value seabirds simply because they are there and enjoy them through venues such as pictures, nature programs, and written accounts without ever directly observing seabirds in their native environment. A direct measure of this value is demonstrated by Federal legislation that established specific national wildlife refuges to protect seabirds and international treaty obligations that provide additional protection for seabirds. Seabirds are also an important subsistence resource for many who live within the Bering Sea Region. Furthermore, the rich knowledge base about seabirds makes them a valuable resource as indicator species for measurement of change in the marine environment.

D. The most abundant breeding species in Alaska are northern fulmars, storm-petrels, kittiwakes, murres, auklets and puffins. These species also form the largest colonies. Fulmars, storm-petrels and kittiwakes are surface feeders, picking their prey from the surface or just below the surface; murres, auklets, and puffins dive for their food. Fulmars nest primarily on island groups in and around the Bering Sea. They take a wide variety of prey (e.g., fish, squid, zooplankton, jellyfish) from the surface or just below the surface. Storm-petrels are strictly nocturnal and nest below ground in either burrows or crevices between rocks. They forage on zooplankton and squid; in some areas they are dependent upon small fish such as capelin and sand lance caught at the surface. Black-legged kittiwakes are widespread throughout Alaska, Canada and Eurasia while red-legged kittiwakes are found only in the Bering Sea region. Both are surface feeders although black-legged kittiwakes feed primarily on small fish and forage over the continental shelf and shelf break; red-legged kittiwakes feed primarily on myctophids and will forage beyond the shelf break.

E. Marine mammals have exhibited similar signs of food stress in recent years. Harbor seals at Tugidak Island in the Gulf of Alaska declined by about 85% between 1976 and 1988. Steller sea lion populations declined by 36% in the Gulf of Alaska between 1977 and 1985, and by another 59% between 1985 and. Northern fur seals declined about 35% by 1986 from their average numbers in the 1970s, although numbers had rebounded somewhat (20%) by 1990. Associated with the declines in Steller sea lions are declines in birth rate, fewer breeding females, fewer pups, decreased adult body condition, decreased juvenile survival, and a change in population age structure.

F. Walker noticed that monsoon seasons with low-index conditions are often marked by drought in Australia, Indonesia, India, and parts of Africa. He also claimed that low-index winters tend to be unusually mild in western Canada. One of his British colleagues chided him in print for suggesting that climatic conditions over such widely separated regions of the globe could be linked. In his reply Walker predicted, correctly, that an explanation would be forthcoming, but that it would require a knowledge of wind patterns above ground level, which were not routinely being observed at that time.

G. The need for long-term time series It seems obvious that without good baseline data ornithologists are doomed to be surprised by the arrival of El Nino every few years. Even when ornithologists and ecologists are at hand to take advantage of an incoming El Nino, lack of preexisting data, and of monitoring afterwards, makes it difficult 134 F.M. Jaksic & J.M. Farina to understand responses of birds to the successive El Nino, La Nina, and "normal" years. Indeed, according to Jaksic, during the last century there were 12 El Nino years and 12 La Nina years, thus leaving about 76 'normal' years in between. Thus, by heavily concentrating attention on only 12% of the time span El Nino, and of neglecting possibly another 12%, ornithologists are essentially ignoring what happens during 76% of the time. This situation may be remedied only as long as data are logged on a regular or continuous basis, that is, as long-term time series. The recipe prescribed by Schreiber & Schreiber to understand El Nino, effects on birds still stands: "...carry out long-term studies that will shed further light on the interactions between global atmospheric cycles, oceanographic phenomena, and avian populations."

H. Populations of seabirds in Alaska are larger and more diverse than any similar region in the Northern Hemisphere. The extensive coastal estuaries and offshore waters of Alaska provide breeding, feeding and migrating habitats for 66 species of seabirds. At least 38 species of seabirds, over 50 million individuals, breed in Alaska. Eight Alaskan species breed only here and in adjacent Siberia. Five additional species range through the North Pacific, but their populations are concentrated in Alaska. In addition to breeding grounds, Alaskan waters also provide important wintering habitat for birds that breed in Canada and Eurasia. Shearwaters, which breed in the southern hemisphere, are the most numerous species in Alaskan waters during the summer.

I. As another indication that food has been limiting in recent years, several largescale die-offs of seabirds, mostly surface-feeding species, have been observed in the Gulf of Alaska during the last decade, most notably in 1983, 1989, and 1993. But Hatch thinks that it is too early to decide the these die-offs reports are somehow connected with the effect of El Nino. Byrd and Tobish believe that high rainfall can affect survival of chicks in earthen burrows, and incidence of big storms with high winds during the chick-rearing period can cause mortality for chicks of species nesting on cliff-ledges, but this view has not been considered as convincing evidence.

Choose the correct letter A, B, C or D.

21 Why do scientists want to investigate El Nino phenomenon at beginning of the paragraph?

A) To learn patterns of creatures that live in marine environment.
B) Assist us to map out because it disturbs normal cycle of for wildlife and human.
C) It has profound theory for both the academic side and practical side.
D) Tropical Pacific Ocean is where El Nino affects most.

22 Why do scientists use seabirds as important subjects when observe climate change world-widely?

A) Seabirds affected by prey changes according to the temperature and ice.
B) Its size is large enough to be observed.
C) El Nino affects seabirds more than other sea creatures.
D) North America is situated in the area where El Nino affects most.

23 What happened for Marine mammals that live in Tugidak Island in Gulf of Alaska?

A) Number of seals declined about 85% from the mid of 20th century.
B) Number of Steller sea lion declined while Number seals grew.
C) Birth rate and breeding females declined on the Tugidak Island.
D) The situation of mammals on the island is not that worse than we expected.

24 According to J. Walker, what happens in the monsoon seasons notably?

A) Flood and drought seriously damage almost everywhere of the planet.
B) Walker's prediction would soon come true.
C) Drought only affects some parts of Africa.
D) Drought will affect somewhere of the earth such as Australia and Indonesia.

Do the following statements agree with the claims of the writer in Reading Passage?

25 Seabirds are regarded as precious indicators of changes in oceanic environment.

A) True
B) False
C) Not Given

26 Seabirds such as Fulmars and Murres feed by the characteristic of prey in different ways.

A) True
B) False
C) Not Given

27 Steller sea lions only decline in birth rate and fewer pups, but the whole population wouldn't be affected by the changes.

A) True
B) False
C) Not Given

28 With reply of Walker's colleague, knowledge of wind patterns will be very helpful.

A) True
B) False
C) Not Given

29 It is difficult to investigate El Nino for ornithologists and ecologist because lack of available statistics and inspections.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

ENSURING OUR FUTURE FOOD SUPPLY

Climate change and new diseases threaten the limited varieties of seeds we depend on for food. Luckily, we still have many of the seeds used in the past–but we must take steps to save them.

Six miles outside the town of Decorah, Iowa in the USA, an 890-acre stretch of rolling fields and woods called Heritage Farm is letting its crops go to seed. Everything about Heritage Farm is in stark contrast to the surrounding acres of intensively farmed fields of corn and soybean that are typical of modern agriculture. Heritage Farm is devoted to collecting rather than growing seeds. It is home to the Seed Savers Exchange, one of the largest non government-owned seed banks in the United States.

In 1975 Diane Ott Whealy was given the seedlings of two plant varieties that her great grandfather had brought to America from Bavaria in 1870: Grandpa Ott's morning glory and his German Pink tomato. Wanting to preserve similar traditional varieties, known as heirloom plants, Diane and her husband, Kent, decided to establish a place where the seeds of the past could be kept and traded. The exchange now has more than 13,000 members, and the many thousands of heirloom varieties they have donated are kept in its walk-in coolers, freezers, and root cellars the seeds of many thousands of heirloom varieties and, as you walk around an old red barn that is covered in Grandpa Ott's beautiful morning glory blossoms, you come across the different vegetables, herbs, and flowers they have planted there.

"Each year our members list their seeds in this," Diane Ott Whealy says, handing over a copy of the Seed Savers Exchange 2010 Yearbook. It is as thick as a big-city telephone directory, with page after page of exotic beans, garlic, potatoes, peppers, apples, pears, and plums– each with its own name and personal history. For example, there's an Estonian Yellow Cherry tomato, which was brought to the seed bank by "an elderly Russian lady" who lived in Tallinn, and a Persian Star garlic from "a bazaar in Samarkand." There's also a bean donated by archaeologists searching for pygmy elephant fossils in New Mexico.

Heirloom vegetables have become fashionable in the United States and Europe over the past decade, prized by a food movement that emphasizes eating locally and preserving the flavor and uniqueness of heirloom varieties. Found mostly in farmers' markets and boutique groceries, heirloom varieties have been squeezed out of supermarkets in favor of modern single-variety fruits and vegetables bred to ship well and have a uniform appearance, not to enhance flavor. But the movement to preserve heirloom varieties goes way beyond the current interest in North America and Europe in tasty, locally grown food. It's also a campaign to protect the world's future food supply. Most people in the well-fed world give little thought to where their food comes from or how it's grown. They wander through well-stocked supermarkets without realizing that there may be problem ahead. We've been hearing for some time about the loss of flora and fauna in our rainforests. Very little, by contrast, is being said or done about the parallel decline in the diversity of the foods we eat.

Food variety extinction is happening all over the world – and it's happening fast. In the United States an estimated 90 percent of historic fruit and vegetable varieties are no longer grown. Of the 7,000 different apple varieties that were grown in the 1800s, fewer than a hundred remain. In the Philippines thousands of varieties of rice once thrived; now only about a hundred are grown there. In China 90 percent of the wheat varieties cultivated just a hundred years ago have disappeared. Experts estimate that in total we have lost more than 50 percent of the world's food varieties over the past century.

Why is this a problem? Because if disease or future climate change affects one of the handful of plants we've come to depend on to feed our growing planet, we might desperately need one of those varieties we've let become extinct. The loss of the world's cereal diversity is a particular cause for concern. A fungus called Ug99, which was first identified in Uganda in 1999, is spreading across the world's wheat crops. From Uganda it moved to Kenya, Ethiopia, Sudan, and Yemen. By 2007 it had jumped the Persian Gulf into Iran. Scientists predict that the fungus will soon make its way into India and Pakistan, then spread to Russia and China, and eventually the USA. Roughly 90 percent of the world's wheat has no defense against this particular fungus. If it reached the USA, an estimated one billion dollars' worth of crops would be at risk. Scientists believe that in Asia and Africa alone, the portion currently in danger could leave one billion people without their primary food source. A famine with significant humanitarian consequences could follow, according to Rick Ward of Cornell University.

The population of the world is expected to reach nine billion by 2045. Some experts say we'll need to double our food production to keep up with this growth. Given the added challenge of climate change and disease, it is becoming ever more urgent to find ways to increase food yield. The world has become increasingly dependent upon a technology-driven, one-size-fits-all approach to food supply. Yet the best hope for securing our food's future may depend on our ability to preserve the locally cultivated foods of the past.

Complete the notes below. Choose ONE WORD AND/OR A NUMBER from the passage for each answer.

THE FOOD WE GROW AND EAT

Supermarkets

• sell fruit and vegetables that transport well

• want fruit and vegetables to be standard in their **30** _____

Public awareness

• while people know about plants disappearing from **31** _____ very few know about the decline in fruit and vegetable varieties

Extinction of food varieties

• less than 100 of the types of **32** _____ once available in the USA are still grown

• over **33** _____ of food varieties around the world have disappeared in the last 100 years

Current problems in food production

• a particular fungus is attacking wheat in various countries

• Rick Ward believes the threat to food supplies in Asia and Africa might lead to a **34** _____

Food production in the future

• climate change and disease may put pressure on food production

• twice the amount of food may be needed because of an increase in **35** _____

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

GLASS

Glass, in one form or another, has long been in noble service to humans. As one of the most widely used of manufactured materials, and certainly the most versatile, it can be as imposing as a telescope mirror the width of a tennis court or as small and simple as a marble rolling across dirt. The uses of this adaptable **Q1**_____ have been broadened dramatically by new technologies: glass fibre optics — more than eight million miles — carrying telephone and television signals across nations, glass ceramics serving as the nose cones of missiles and as crowns for teeth; tiny glass beads taking radiation doses inside the body to specific organs, even a new type of glass fashioned of nuclear waste in order to dispose of that unwanted material.

On the horizon are optical computers. These could store programs and process information by means of light - pulses from tiny lasers - rather than electrons. And the pulses would travel over glass **Q2**_____s, not copper wire. These machines could function hundreds of times faster than today's electronic computers and hold vastly more **Q3**_____. Today fibre optics are used to obtain a clearer image of smaller and smaller objects than ever before - even bacterial viruses. A new generation of optical instruments is emerging that can provide detailed imaging of the inner workings of cells. It is the surge in fibre optic use and in liquid crystal displays that has set the U.S. glass industry (a 16 billion dollar business employing some 150,000 workers) to building new plants to meet demand.

But it is not only in technology and commerce that glass has widened its **Q4**_____s. The use of glass as art, a tradition spins back at least to Roman times, is also booming. Nearly everywhere, it seems, men and women are blowing **Q5** _____ and creating works of art. «I didn't sell a piece of glass until 1975,» Dale Chihuly said, smiling, for in the 18 years since the end of the dry spell, he has become one of the most financially successful artists of the 20th century. He now has a new commission - a glass sculpture for the headquarters building of a pizza company - for which his fee is half a million dollars.

Today, scientists continue to experiment with new glass mixtures and building designers test their imaginations with applications of special types of glass. Think of how the tall buildings in New York could perform a symphony of colours as the glass in them is made to change **Q6**_____ instantly. Glass as instant curtains is available now, but the cost is exorbitant. As for the glass changing colours instantly, that may come true. Mike Davies's vision may indeed be on the way to fulfilment.

PART 2

Questions 7–14

The people below all want to find some caves that they could visit (Q7-11) or suitable accommodation (Q12-14). There are descriptions of caves A-H and accommodation I-M. Decide which would be the most suitable for the following people.

A) Hatton Hole — The area here isn't attractive, but the temperature inside is comfortable – there's even a stream for swimming! These caves have been made larger for the music shows held here. Cave paintings can be seen further underground, and there are books available.

B) Mara Hollow — You'll need to know all about going into caves to visit this place, as there's no guide. You can walk comfortably for hundreds of metres, but some sections are quite narrow. There's a great display of the caves' history, with paintings and photos showing the first people to enter the caves during the 20th century.

C) Maribu Caves — These caves are perfect for experienced people wishing to visit caves by themselves, as they're quite safe. And there's plenty to see as the colourful rocks inside look like strange objects - animals, birds or even vegetables! There's also a big natural pool you can dive into, so take your costumes.

D) Trussack Cavern — These huge old caves go underground for miles, and when the temperature drops outside, it's actually warmer inside! The guides know everything about the caves, from how they were used thousands of years ago to their recent discovery. The natural swimming pool and scenery outside are beautiful - perfect for photos.

E) Kemble Caves — You'll need a guide round these caves. They're not deep, but they're narrow, with streams running through them. However, the rock shapes you'll see hanging from the roof are amazing! The views outside are beautiful, and there's a great exhibition about people living in the caves centuries ago.

F) Dragon's Nook — These caves are surrounded by beautiful trees and waterfalls. They were made larger recently to let visitors enter easily, and they're now big enough to hold exhibitions and concerts - from pop to classical! Visitors can walk around without a guide. Take your camera for the original wall paintings.

G) Sorian Hill — This is a great place for a swim! Waterfalls flow into rocky pools outside the entrance. Inside, rock has been removed to make a wonderful space for visitors, although photography isn't allowed. In here Classical music plays as you walk around by yourselves.

H) Canran's Den — These large, deep caves with waterfalls are perfect for photos of the strange rock shapes. There are pictures on the rock walls done by people living here centuries ago. Who's find the caves nowadays haven't changed at all – including the low temperatures. Visitors are accompanied by guides.

I) We have a lovely four-bedroom house away from the city centre. There's a garage, a garden and antique furniture. The location offers easy access to several beautiful historical houses by road with a leisure centre and pool just ten minutes away on foot. We have a dog that needs looking after.

J) I live on the top floor of an old town house in a busy street in central London. It's a small but very modern flat with blinds and wooden floors. There are lots of small art galleries nearby and a bus to Camden market. Just around the corner is a gym.

K) We live in a large two-bedroom flat on the third floor of a block in the centre. There's a balcony, from which you can see many famous buildings and luxury curtains and carpets in all rooms. Several popular London theatres are just a short walk away. We'd rather not have visitors with pets.

L) We live in a cottage opposite a large forest with a beautiful lake where you can try different water sports. You can borrow our bikes to get around the area or take one of the regular trains to the city centre. There are two first floor bedrooms and an attic which can be used as a small bedroom.

M) I have a one-bedroom flat with central heating and great views of south London in a quiet, safe street. You can try the European restaurants nearby or take a train to central London. It's close to Wimbledon tennis club and an hour from the coast. A spare duvet, blanket and a fan are available.

7

Q7

Marek and his family often visit caves, so would prefer not to have a guide. They'd like to find caves with interesting rock shapes, and where they could have a swim.

8

Q8

Jane and her family want a tour of caves that look just as they did when they were discovered, with original cave paintings. They like caves with water flowing through them.

9

Q9

Mario and his family will be visiting caves during the winter, and don't want anywhere cold inside or very small. They'd like to have someone show them the caves and explain their history.

10

Q10

Twins Henry and Karina are keen on photography and want to take good pictures inside and outside the caves they visit. Their parents would like to attend a music performance inside the caves.

11

Q11

Justine and her family are experienced at visiting caves, and want to find some that go a long way underground. They'd also like to see an exhibition about how the caves were discovered.

12

Q12

Fernando and Manuela would like to be in a central location where they can enjoy views of the city centre. They are hoping to see several musicals. Manuela doesn't like cats.

13

Q13

Ben and Lynne want a house where they can drive to places outside London and learn about how people used to live. Their two sons want to be able to play tennis and go swimming. They don't mind pets.

14

Q14

Claire and Tom have two young children. They are an active family who want to see both the countryside and central London. They don't have a car so will need to use other transport.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Questions arise to be answered
B) Contrast data between present and past
C) Initial response of association on the village
D) Origin of a certain ancient building
E) Inner structure of the building
F) Layout of the village to persist in micro-environment
G) Terms of the village explained
H) Definition of village type
I) Difference between village and town

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

EXPLORING BRITISH VILLAGE

1. The Neolithic longhouse was a long, narrow timber dwelling built by the first farmers in Europe beginning at least as early as the period 5000 to 6000 BC. The origin of the name blackhouse is of some debate. It could be less than 150 years old and may have been synonymous with inferior. On Lewis, in particular, it seems to have been used to distinguish the older blackhouses from some of the newer white-houses (Scottish Gaelic: taigh-geal, Irish: tí geal, tí bán), with their mortared stone walls. There may also be some confusion arising from the phonetic similarity

between the 'dubh', meaning black and taghadh meaning thatch. The houses in Scotland were built high rather than wide; however, some were built small and wide.

2. The buildings were generally built with double-wall dry-stone walls packed with earth and wooden rafters covered with a thatch of turf with cereal straw or reed. The floor was generally flagstones or packed earth and there was a central hearth for the fire. There was no chimney for the smoke to escape through. Instead, the smoke made its way through the roof. The blackhouse was used to accommodate livestock as well as people. People lived at one end and the animals lived at the other with a partition between them.

3. It is estimated that there are over ten thousand villages in Britain, yet defining the term 'village' isn't as simple as it may at first sound. When does a hamlet become a village? And when does a village become a town?

4. Strictly speaking the term 'village' comes from the Latin 'villaticus', which roughly translates as 'a group of houses outside a villa farmstead'. Today a village is understood as a collection of buildings (usually at least 20) that is larger than a hamlet, yet smaller than a town, and which contains at least one communal or public building. This is most commonly the parish church, though it can be a chapel, school, public house, shop, post office, smithy or mill. Villagers will share communal resources such as access roads, a water supply, and usually a place of worship.

5. A hamlet is a smaller grouping of buildings that don't necessarily have any public or service buildings to support it. A significant difference is that it won't have a parish church like a village does, and most hamlets contain only between three and twenty buildings.

6. The point at which a village becomes a town is difficult to determine and is probably best defined by those who live there. However, since the Middle Ages, the term 'town' has been a legal term that refers to the fact that the community has a borough charter. The situation is confused by the fact that there are many town-like suburban communities calling themselves villages (for example, Oxton Village in Birkenhead), as well as designed suburban 'villages' such as those built under the Garden Village Movement.

PART 4

Questions 21–29

Read the following text for questions 21-29.

AUSTRALIA'S MEGAFAUNA CONTROVERSY

Just how long did humans live side by side with megafauna in Australia? Barry Brook, Richard Gillespie and Paul Martin dispute previous claims of a lengthy coexistence.

Over the past 50 millennia, Australia has witnessed the extinction of many species of large animals, including a rhinoceros-sized wombat and goannas the size of crocodiles. Debate about the possible cause of these extinctions has continued for more than 150 years and one the crucial questions raised is how long humans and megafauna coexisted in Australia. We need to know the overlap of time to make an informed choice between the two main theories regarding the causes of these extinctions. If humans and megafauna coexisted for a protracted period then climate change is the more likely cause. However, if the megafauna became extinct shortly after the arrival of humans, then humans are the likely culprits.

The archaeological site at Cuddie Springs in eastern Australia appears to be well preserved. This dusty claypan holds within its sediments a rich cache of flaked stone and seed-grinding tools, and side by side with these clear signals of human culture are the bones of a dozen or more species of megafauna. Drs Judith Field and Stephen Wroe of the University of Sydney, who excavated the site, claim that it provides unequivocal evidence of a long overlap of humans and megafauna, and conclude that aridity leading up to the last Ice Age brought about their eventual demise. In the long-standing explanation of this site, artefacts such as stone tools and extinct animals remain were deposited over many thousands of years in an ephemeral lake — a body of water existing for a relatively short time — and remained in place and undisturbed until the present day.

There is no disputing the close association of bones and stones at Cuddie Springs, as both are found 1 to 1.7 metres below the modern surface. The dating of these layers is accurate: ages for the sediments were obtained through radiocarbon dating of charcoal fragments and luminescence dating of sand grains from the same levels (revealing when a sample was last exposed to sunlight). Intriguingly, some of the stone show surface features indicating their use for processing plants, and a few even have well-preserved blood and hair residues suggesting they were used in butchering animals.

But is the case proposed by Field and Wroe clear-cut? We carried out a reanalysis of the scientific data from Cuddie Springs that brings into question their conclusions. The amount of anthropological evidence found at the site is remarkable: we estimate there are more than 3 tonnes of charcoal and more than 300 tonnes of stone buried there. Field and Wroe estimate that there are approximately 20 million artefacts. This plethora of tools is hard to reconcile with a site that was only available for occupation when the lake was dry. Furthermore, no cultural features such as oven pits have been discovered. If the sediment layers have remained undisturbed since being laid down, as Field and Wroe contend, then the ages of those sediments should increase with depth. However, our analysis revealed a number of inconsistencies.

First, the charcoal samples are all roughly 36,000 years old. Second, sand in the two upper levels is considerably younger than charcoal from the same levels. Third, Field and Wroe say that the tools and seed-grinding stones used for plant and animal processing are ancient, yet they are very similar to implements found elsewhere that were in use only a few thousand years ago. Also of interest is the fact that a deep drill core made a mere 60 metres from the site recovered no stone artefact or fossil bones whatsoever. These points suggest strongly that the sediments have been moved about and some of the old charcoal has been re-deposited in younger layers. Indeed, one sample of cow bone found 1 metre below the surface came from sediments where charcoal dated at 6,000 and 23,000 years old is mixed with 17,000-year-old sand. The megafauna bones themselves have not yet been dated, although new technological developments make this a possibility in the near future.

We propose that the archaeologists have actually been sampling the debris carried by ancient flood channels beneath the site, including charcoal transported from bushfires that

intermittently occurred within the catchment. Flood events more likely explain the accumulation of megafauna remains, and could have mixed old bones with fresh deposits. European graziers also disturbed the site in 1876 by constructing a well to provide water for their cattle. Given the expense of well-digging, we speculate that the graziers made sure it was protected from the damage caused by cattle hooves by lining the surface with small stones collected from further afield, including prehistoric quarries. This idea is consistent with the thin layer of stones spread over a large area, with cattle occasionally breaking through the gravel surface and forcing the stone and even cattle bones deeper into the waterlogged soil.

The lack of conclusive evidence that humans and megafauna coexisted for a lengthy period casts doubt on Field and Wroe's assertion that climate change was responsible for the extinction of Australia's megafauna. However, we do not suggest that newly arrived, well-armed hunters systematically slaughtered all the large beasts they encountered. Recent studies based on the biology of modern-day large mammals, combined with observations of people who still practise a traditional hunter-gatherer lifestyle, reveal an unexpected paradox and suggest a further possible explanation as to what happened. Using a mathematical model, it was found that a group of 10 people killing only one juvenile Diprotodon each year would be sufficient to bring about the extinction of that species within 1,000 years. This suggests that here, as in other parts of the world, the arrival of humans in lands previously inhabited only by animals created a volatile combination in which large animals fared badly.

Note: The Diprotodon (a rhinoceros-sized wombat), an example of Australia's now extinct megafauna.

Do the following statements agree with the claims of the writer in the Reading Passage?

21 **Field and Wroe argue that findings at the Cuddie Springs site show that people lived in this area at the same time as megafauna.**

A) True
B) False
C) Not Given

22 **Field and Wroe believe it is likely that smaller megafauna species survived the last Ice Age.**

A) True
B) False
C) Not Given

23 **The writers believe that the dating of earth up to 1.7m below the present surface at Cuddie Springs is unreliable.**

A) True
B) False
C) Not Given

24 **Some artefacts found at Cuddie Springs were preserved well enough to reveal their function.**

A) True
B) False
C) Not Given

Choose the correct letter, A, B, C or D.

25 **What conclusions did the writers reach about the inconsistencies in the data from Cuddie Springs?**

A) The different layers of sediment have been mixed over time.
B) The sand evidence is unhelpful and should be disregarded.
C) The area needs to be re-examined when technology improves.
D) The charcoal found in the area cannot be dated.

26 **According to the writers, what impact could a natural phenomenon have had on this site?**

A) Floods could have caused the death of the megafauna.
B) Floods could have disturbed the archaeological evidence.
C) Bushfires could have prevented humans from settling in the area for any length of time.
D) Bushfires could have destroyed much of the evidence left by megafauna and humans.

27 **What did the writers speculate about the people who lived at this site in 1876?**

A) They bred cattle whose bones could have been confused with megafauna.
B) They found that the soil was too waterlogged for farming.
C) They allowed cattle to move around freely at the site.
D) They brought stones there from another area.

28 **In the final paragraph what suggestion do the writers make about Australia's megafauna?**

A) A rapid change in climate may have been responsible for the extinction of the megafauna.
B) Megafauna could have died out as a result of small numbers being killed year after year.
C) The population of humans at that time was probably insufficient to cause the extinction of the megafauna.
D) The extinction of ancient animals should not be compared to that of modern-day species.

29 **Which of the following best represents the writers' criticism of Field and Wroe?**

A) Their methods were not well thought out.
B) Their excavations did not go deep enough.
C) Their technology failed to obtain precise data.
D) Their conclusions were based on inconsistent data.

PART 5 Questions 30–35

Read the following text for questions 30-35.

CAN SCIENTISTS TELL US: WHAT HAPPINESS IS?

Economists accept that if people describe themselves as happy, then they are happy. However, psychologists differentiate between levels of happiness. The most immediate type involves a feeling; pleasure or joy. But sometimes happiness is a judgment that life is satisfying, and does not imply an emotional state. Esteemed psychologist Martin Seligman has spearheaded an effort to study the science of happiness. The bad news is that we're not wired to be happy. The good news is that we can do something about it. Since its origins in a Leipzig laboratory 130 years ago, psychology has had little to say about goodness and contentment. Mostly psychologists have concerned themselves with weakness and misery. There are libraries full of theories

about why we get sad, worried, and angry. It hasn't been respectable science to study what happens when lives go well. Positive experiences, such as joy, kindness, altruism and heroism, have mainly been ignored. For every 100 psychology papers dealing with anxiety or depression, only one concerns a positive trait.

A few pioneers in experimental psychology bucked the trend. Professor Alice Isen of Cornell University and colleagues have demonstrated how positive emotions make people think faster and more creatively. Showing how easy it is to give people an intellectual boost, Isen divided doctors making a tricky diagnosis into three groups: one received candy, one read humanistic statements about medicine, one was a control group. The doctors who had candy displayed the most creative thinking and worked more efficiently. Inspired by Isen and others, Seligman got stuck in. He raised millions of dollars of research money and funded 50 research groups involving 150 scientists across the world. Four positive psychology centres opened, decorated in cheerful colours and furnished with sofas and baby-sitters. There were get-togethers on Mexican beaches where psychologists would snorkel and eat fajitas, then form "pods" to discuss subjects such as wonder and awe. A thousand therapists were coached in the new science.

But critics are demanding answers to big questions. What is the point of defining levels of haziness and classifying the virtues? Aren't these concepts vague and impossible to pin down? Can you justify spending funds to research positive states when there are problems such as famine, flood and epidemic depression to be solved? Seligman knows his work can be belittled alongside trite notions such as "the power of positive thinking". His plan to stop the new science floating "on the waves of self-improvement fashion" is to make sure it is anchored to positive philosophy above, and to positive biology below.

And this takes us back to our evolutionary past. Homo sapiens evolved during the Pleistocene era (1.8 m to 10,000 years ago), a time of hardship and turmoil. It was the Ice Age, and our ancestors endured long freezes as glaciers formed, then ferocious floods as the ice masses melted. We shared the planet with terrifying creatures such as mammoths, elephant-sized ground sloths and sabre-toothed cats. But by the end of the Pleistocene, all these animals were extinct. Humans, on the other hand, had evolved large brains and used their intelligence to make fire and sophisticated tools, to develop talk and social rituals. Survival in a time of adversity forged our brains into a persistent mould. Professor Seligman says: "Because our brain evolved during a time of ice, flood and famine, we have a catastrophic brain. The way the brain works is looking for what's wrong. The problem is, that worked in the Pleistocene era. It favoured you, but it doesn't work in the modern world".

Although most people rate themselves as happy, there is a wealth of evidence to show that negative thinking is deeply ingrained in the human psyche. Experiments show that we remember failures more vividly than success. We dwell on what went badly, not what went well. Of the six universal emotions, four — anger, fear, disgust and sadness — are negative and only one, joy, is positive. (The sixth, surprise, is neutral). According to the psychologist Daniel Nettle, author of Happiness, and one of the Royal Institution lectures, the negative emotion each tells us "something bad has happened" and suggest a different course of action.

What is it about the structure of the brain that underlies our bias towards negative thinking? And is there a biology of joy? At Iowa University, neuroscientist studied what happens when people are shown pleasant and unpleasant pictures. When subjects see landscapes or dolphins playing, part of the frontal lobe of the brain becomes active. But when they are shown unpleasant images — a bird covered in oil, or a dead soldier with part of his face missing — the response comes from more primitive parts of the brain. The ability to feel negative emotions derives from an ancient danger-recognition system formed early in the brain's evolution. The pre-frontal cortex, which registers happiness, is the part used for higher thinking, an area that evolved later in human history.

Our difficulty, according to Daniel Nettle, is that the brain systems for liking and wanting are separate. Wanting involves two ancient regions — the amygdala and the nucleus accumbens — that communicate using the chemical dopamine to form the brain's reward system. They are involved in anticipating the pleasure of eating and in addiction to drugs. A rat will press a bar repeatedly, ignoring sexually available partners, to receive electrical stimulation of the "wanting" parts of the brain. But having received brain stimulation, the rat eats more but shows no sign of enjoying the food it craved. In humans, a drug like nicotine produces much craving but little pleasure.

In essence, what the biology lesson tells us is that negative emotions are fundamental to the human condition and it's no wonder they are difficult to eradicate. At the same time, by a trick of nature, our brains are designed to crave but never really achieve lasting happiness.

Complete the following summary of the paragraphs of the Reading Passage. Using NO MORE THAN FOUR WORDS from the Reading Passage for each answer.

CAN SCIENTISTS TELL US: WHAT HAPPINESS IS? – SUMMARY

A few pioneers in experimental psychology study what happens when lives go well. Professor Alice divided doctors, making a tricky experiment, into three groups: besides the one control group, the other two either are asked to read humanistic statements about drugs or received **30** _____. The latter displayed the most creative thinking and worked more efficiently. Since critics are questioning the significance of the **31** _____ for both levels of happiness and classification for the virtues. Professor Seligman countered in an evolutional theory: survival in a time of adversity forged our brains into the way of thinking for what's wrong because we have **32** _____.

There is bountiful evidence to show that negative thinking is deeply built in the human psyche. Later, at Iowa University, neuroscientists studied the active parts in brains to contrast when people are shown pleasant and unpleasant pictures. When positive images like **33** _____ are shown, part of the frontal lobe of the brain becomes active. But when they are shown unpleasant image, the response comes from **34** _____ of the brain.

Choose the correct letter A, B, C or D.

35 **According to Daniel Nettle in the last two paragraphs, what is true as the scientists can tell us about happiness:**

A) Brain systems always mix liking and wanting together.

B) Negative emotions can be easily rid of if we think positively.

C) Happiness is like nicotine we are craving for but get little pleasure.

D) The inner mechanism of human brains does not assist us to achieve durable happiness.

MOCK TEST 31

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1 — Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

AVIATION AND NET-ZERO EMISSIONS

The Earth's temperature is increasing. Many countries do not want the **Q1**_____ to become too warm. That is why they have set a goal to limit how much the **Q2**_____ increases. To reach their goal, the world must reach net-zero greenhouse gas emissions. That means that the amount of greenhouse gases released into the atmosphere is the same as the amount removed from the atmosphere.

The aviation industry produces a significant amount of carbon dioxide. This is a **Q3**_____ gas. Airplanes use fossil fuels as an energy source. Burning fossil fuels releases greenhouse gases. Scientists predict that the total greenhouse gas emissions released by **Q4**_____ will increase. That's because more people are traveling by air.

How can the aviation industry reach net-zero greenhouse gas emissions? There are many options. One way is for people to fly less. Another one is to make more efficient airplanes. **Q5** _____ option is to offset the carbon dioxide produced by air travel. That means that the industry pays someone else to remove carbon dioxide from the atmosphere. But this can be tricky if it is not done correctly. The last option is to switch the fuel used by airplanes. Instead of fossil fuels, planes could use a **Q6**_____ that does not produce greenhouse gases when used.

PART 2 — Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) Your daughter has a talent and wants to master it.

B) This school is suitable for one gender.

C) A lot of children join this school after the age of 11.

D) This school has no big classes which helps them to keep focus.

E) This school is in a nice district and has good variety of subjects.

F) You want to study out of the country to study languages there.

G) Your 20 years old girl has just won a scholarship.

H) You want to know more about out of the country language courses.

I) This school pays for a particular skill.

J) This school is for sports only.

7

Q7

Prior's Field School, Godalming, Surrey GU7 2RH. Independent Boarding School and Day School for girls aged 11-18 years.

8

Q8

Study Languages in Europe. Language courses abroad for business or pleasure, all ages including French for juniors in Montpellier. We can help you find the course to meet your personal requirements.

9

Q9

CIFE colleges: students come because they want to be taught in small groups, receive more individual attention, and study in a mature, supportive and focused environment.

10

Q10

Language courses abroad: holidays, revision courses, gap year and more programmes. Fantastic summer offers available. Call or email for a free brochure.

11

Q11

Cranleigh Preparatory School: a boarding and day school for 7-13 year olds. 11+ a popular entry point.

12

Q12

S. Anselm's: one of the very best prep schools in England. Happy family atmosphere, outstanding academic record, beautiful Peak District setting, excellent sport, music, drama, art.

13

Q13

Haberdashers' Monmouth Schools: with dedicated professional staff and superb facilities, the schools are confident they can develop your child's talents.

14

Q14

The Oratory School. Good at sports? Sports scholarships available.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) One product — many dishes
B) Simple to prepare
C) Once local — now global
D) Good for everyone
E) More than food
F) Impossible to grow
G) Synonymous to food
H) Different table manners

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

RICE AROUND THE WORLD

I. Over the centuries, rice has become a part of the traditions of many cultures. In some societies, it is traditional to throw a handful of rice on newlywed couples, symbolizing the wish for a large family and prosperity. In India, rice is traditionally the first food that bride offers her new husband. It is typical for people to leave offerings of rice in Buddhist temples.

II. The basic recipe for cooking rice is easy. First you need to bring 2 cups of water to boil. When the water is boiling, add 1 cup of rice. Cover the pot. As soon as the water boils again, reduce the heat. Let the rice cook for 15 to 20 minutes. The rice is ready when all the water is absorbed.

III. Rice is the primary source of nutrition for more than half of the world's population. Countries as different as Japan, India, Nigeria and Mexico use rice in their national cuisine. In Chinese, the word for rice is the same as the word for food.

IV. Many people consider rice to be one of the healthiest possible food choices. It has no sodium or cholesterol, and almost no fat. One half cup of rice has approximately 100 calories, and those calories are rich in important vitamins and minerals, including folic acid, iron and zinc.

V. Archeologists believe that rice has been grown as a source of food for at least 4000 years. It was first grown in China, and then introduced to India. Over the centuries the practice of growing rice has spread globally.

VI. One of the amazing things about rice is how adaptable it is. It is an essential ingredient in cuisines all around the world. Every country in West Africa has its own version of regional rice dishes, and rice is used in many forms from sushi to side dishes.

PART 4

Questions 21–29

Read the following text for questions 21-29.

CLIMATE CHANGE AND ECONOMIC RISK

New modelling finds risk to global economies much worse than previously thought, but group of central banks says even this may be an underestimate.

The physical shocks caused by climate breakdown will hit global economic growth by a third, according to a risk assessment by a network of central banks. The rise in the estimated hit to the world's economies as a result of the shocks from flooding, droughts, temperature rises, and mitigating and adapting to extreme weather was the result of new climate modelling published this year.

The Network for Greening the Financial System, a membership body of global banks and financial organisations, said in a report this week that the huge increase in the risk from physical shocks to the economy marked a considerable change in the overall severity of the damage caused. The report was published as the business losses alone from the devastating floods in Valencia, which killed more than 200 people, were calculated at well over €10bn.

Despite the increase in risk to global economies, some experts say the analysis is a huge underestimate of the impact climate breakdown will wreak on economic growth. Sandy Trust, an actuary who works on sustainability and the climate crisis, said the small print in the report revealed they had failed to take in to account the impact of climate tipping points, sea temperature rises, migration and conflict as a result of global heating, human health impacts or biodiversity loss.

Climate tipping points, for example the melting of the Greenland ice sheet, are critical thresholds that, if crossed, will lead to huge changes in the climate system. Trust said this was a massive one-third hit from physical damage on GDP and had increased more than five times from about 6% to 33%.

The NGFS is a group of global banks that provide environmental and climate risk modelling in the financial sector. Its update on climate risks using the new methodology foresees more than 30% losses due to climate crisis by 2100 from a 3C rise in global average surface temperatures.

Yet the group warned that the future economic outlook may be significantly worse. It cannot be excluded that the economic effects of climate change might turn out to be even more severe than visualised under the NGFS scenarios, for instance, if certain tipping points are reached.

Choose the correct letter A, B, C or D.

21 **According to the passage, the climate change ...**
A) is going to rise by a third in the near future.
B) is not a risk but an opportunity for bankers and investors.
C) is to affect economies negatively soon.
D) has been calculated as a foe which bankers fought before.

22 **We can infer from the passage that the flood in Valencia...**
A) didn't affect people much.
B) is going to cause a major financial shock.
C) has been a severe humanitarian and economical disaster.
D) has been assessed by more than 200 people.

23 **In the passage, Sandy Trust ...**

A) warns that the climate change will vanish after some major catastrophes occur.

B) claims that underestimating climate change will lead to negative consequences.

C) states that after some tipping points there will be no major changes.

D) is critical of the climate change threshold idea.

24 **According the passage, global heating with some factors leads to ...**

A) more conflict and wars in the world.

B) the climate change.

C) more floods in some areas.

D) major economic changes.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 **The Network for Greening the Financial System is the founder of global banks and other financial companies.**

A) True

B) False

C) Not Given

26 **The Network for Greening the Financial System calculates that, by 2100, climate change reduces by 30%.**

A) True

B) False

C) Not Given

27 **After reaching certain tipping points, effects of climate change may lead even bigger consequences than previously thought.**

A) True

B) False

C) Not Given

28 **Before the current report, global banks and other financial organizations had never predicted effects of climate change.**

A) True

B) False

C) Not Given

29 **Major ecological disasters was the reason of the new climate modelling.**

A) True

B) False

C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE FORGOTTEN ROLE OF WOMEN IN MEDIEVAL ARTS

A team of archaeologists recently and unexpectedly revealed direct archaeological evidence of the involvement of medieval women in the production of manuscripts. This challenges the widespread assumptions that men were the sole producers of books throughout the period in European history known as the Middle Ages. They did so by identifying particles of blue pigment in the fossilised dental plaque of a medieval woman as lapis lazuli, an extremely valuable stone at the time.

This discovery was made possible by applying technological advances in archaeological science to tartar on teeth. In most societies today, oral hygiene practices are part of our daily routine, meaning that dental plaque is regularly removed and does not have a chance to build up on our teeth. This was not the case in the past. Plaque built up and mineralised over the course of people's lives and can preserve tiny particles over very long periods.

The team analysed the skeletal remains of a female individual, known as B78, who lived in the 11th-12th century. She was buried in the grounds of a former women's monastery in Dalheim, Germany. They found well over 100 bright blue particles throughout the tartar that was still preserved on her teeth.

To be sure about the nature of the particles, a range of microscopy techniques were used. Results showed the blue specks were lazurite, the blue portion of lapis lazuli stone, a substance more precious than gold in Medieval Europe. Afghanistan was the only source of the stone at the time, and preparing the pigment took great skill.

The most likely explanation is that this woman was an artist who repeatedly used her lips to make a fine point on the end of her brush in order to paint intricate details on manuscripts. This finding suggests that women were more involved in the production of books throughout the Middle Ages than tends to be thought.

Additionally, artists are largely invisible in both historical and archaeological records, as they rarely signed their work before the 15th century. The work strongly points to the possibility of using microscopic particles trapped in ancient tartar to track artists and reveal the invisible workforce behind many forms of art.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

LAPIS LAZULI

A blue pigment used to create artworks in Europe in the Middle Ages was derived from a stone called lapis lazuli. In medieval times, even **30**_____ was not as valuable. Lapis lazuli could only be found in Afghanistan and a lot of **31**_____ was needed to make the pigment from the stone.

The procedure used to do this appeared much later in the manuals used by European artists and this suggests that the powder came to their countries as an imported powder. Artists often had to make a **32**_____ on their brushes using their mouths, which then enabled them to produce the fine features needed for **33**_____ and books.

Choose the correct letter A, B, C or D.

34 **What did the skeleton of B78 suggest about her?**

A) She had not been very old when she died.

B) Her life had not been very physically demanding.

C) Her teeth had more tartar than most skeletons of that age.

D) She had been given a grander burial than other women of her time.

35 **What problem does the writer highlight about medieval artists in the last paragraph?**

A) The poor facilities available to females in the profession.
B) The small number of projects available to them.
C) The difficulties locating their skeletal remains for study.
D) The lack of evidence for their contribution to books.

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

ELECTIONS AND DISINFORMATION IN 2024

The year 2024 will be the biggest ever year for voting. National elections will take place in around 64 countries, as well as in the European Union. An estimated two billion people - almost half the global population - could **Q1**_____ at some time this year. The results of these polls will bring big changes for the future of many **Q2**_____. Voters in the world's four largest electoral blocs - the EU, India, Indonesia and the USA - will be casting their votes.

One of the first contests will be in Taiwan on January the 13th. For much of the **Q3**_____, eyes will be focused on events in the US. In November, there will be a repeat of the 2020 election if Donald Trump runs for President again.

Journalists are worried about how free and fair many **Q4** _____ will be. The website Bloomberg.com has already posed a question that is on the lips of many people. It asked: "Will 2024 be the year fake news destroys democracy?" Bloomberg said bad actors will use artificial intelligence to change the way people vote via fake **Q5**_____ articles. It said there will be "a storm of disinformation". It added that **Q6** _____ has already begun to spread, and that this "gets harder to spot as fake with every passing month".

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You are seeking a tropical retreat.

B) You want a fun-filled family getaway.

C) You want to relax and relieve your stress.

D) You want to enjoy doing something that's fun and active.

E) You need to relax doing a sport that requires attention and fun.

F) You are freshly married. You want to go somewhere for you and your wife.

G) You want to explore and know about nature as well as doing some outdoor activities.

H) You want an expensive and qualified rest.

I) Your librarian friend wants to go somewhere. He would like to see places he only sees from books.

J) You and your friends want to go there to escape from summer as well as doing some extreme sports.

18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

SCHOOL FEEDING AND EDUCATION IN MALAWI

I. There are not enough classrooms at the Msekeni primary school, so half the lessons take place in the shade of yellow-blossomed acacia trees. Given this shortage, it might seem odd that one classroom has been emptied and turned into a storeroom for sacks of grain. But it makes sense. Food matters more than shelter.

II. Msekeni is in one of the poorer parts of Malawi, a landlocked southern African country of exceptional beauty and great poverty. No war lays waste Malawi, nor is the land unusually eroded or infertile, but Malawians still have trouble finding enough to eat. Half of the children under five are underfed to the point of stunting. Hunger blights most aspects of Malawian life, so the country is as good a place as any to investigate how nutrition affects development, and vice versa.

III. The headmaster at Msekeni, Bernard Kumanda, has strong views on the subject. He thinks food is a priceless teaching aid. Since 1999, his pupils have received free school lunches. Donors such as the World Food Programme provide the food: those sacks of grain in that converted classroom. Local volunteers do the cooking - turning the dry ingredients into a bland but nutritious slop and spooning it out on to plastic plates. The children line up in large crowds, cheerfully singing a song called "We are getting porridge".

IV. When the school's feeding programme was introduced, enrolment at Msekeni doubled. Some of the new pupils had switched from nearby schools that did not give out free porridge, but most were children whose families had previously kept them at home to work. These families were so poor that the long-term benefits of education seemed unattractive when setting against the short-term gain of sending children out to gather firewood or help in the fields. One plate of porridge a day completely altered the calculation. A child fed at school will not howl so plaintively for food at home. Girls, who are more likely than boys to be kept out of school, are given extra snacks to take home.

V. When a school takes in a horde of extra students from the poorest homes, you would expect standards to drop. Anywhere in the world, poor kids tend to perform worse than their better-off classmates. When the influx of new pupils is not accompanied by an increase in the number of teachers, as was the case at Msekeni, you would expect standards to fall even further. But they have not. Pass rates at Msekeni improved dramatically, from 30% to 85%. Although this was an exceptional example, the nationwide results of school feeding programmes were still pretty good. On average, after a Malawian school started handing out free food it attracted 38% more girls and 24% more boys. The pass rate for boys stayed about the same, while for girls it improved by 9.5%.

VI. On a global scale, the good news is that people are eating better than ever before. Homo sapiens has grown 50% bigger since the industrial revolution. Three centuries ago, chronic malnutrition was more or less universal. Now, it is extremely rare in rich countries. In developing countries, where most people live, plates and rice bowls are all fuller than ever before. The proportion of children under five in the developing world who are malnourished to the point of stunting fell from 39% in 1990 to 30% in 2000, says the World Health Organisation (WHO). In other places, the battle against hunger is steadily being won. Better nutrition is making people cleverer and more energetic, which will help them grow more prosperous. And when they eventually join the ranks of the well off, they can start fretting about growing too fast.

PART 4

Questions 21–29

Read the following text for questions 21-29.

CAUSES OF OVERPOPULATION

Firstly it is decline in the Death Rate: At the root of overpopulation is the difference between the overall birth rate and death rate in populations. If the number of children born each year equals the number of adults that die, then the population will stabilize. Talking about overpopulation shows that while there are many factors that can increase the death rate for short periods of time, the ones that increase the birth rate do so over a long period of time. The discovery of agriculture by our ancestors was one factor that provided them with the ability to sustain their nutrition without hunting. This created the first imbalance between the two rates.

Following this came the industrial revolution and better Medical Facilities. Technological advancement was perhaps the biggest reason why the balance has been permanently disturbed.

Science was able to produce better means of producing food, which allowed families to feed more mouths. Medical science made many discoveries thanks to which they were able to defeat a whole range of diseases. Illnesses that had claimed thousands of lives till now were cured because of the invention of vaccines. Combining the increase in food supply with fewer means of mortality tipped the balance and became the starting point of overpopulation.

However, when talking about overpopulation we should understand that there is a psychological component as well. For thousands of years, a very small part of the population had enough money to live in comfort. The rest faced poverty and would give birth to large families to make up for the high infant mortality rate. Families that have been through poverty, natural disasters or are simply in need of more hands to work are a major factor for overpopulation. As compared to earlier times, most of these extra children survive and consume resources that are not sufficient in nature. With latest technological advancement and more discoveries in medical science particularly in Fertility Treatment, it has become possible for couples who are unable to conceive to undergo fertility treatment methods and have their own babies. Today there are effective medicines which can increases the chance of conception and lead to rise in birth rate. Moreover, due to modern techniques pregnancies today are far safer.

Another cause of overpopulation is immigration. Many people prefer to move to developed countries like US, UK, Canada and Australia where best facilities are available in terms of medical, education, security and employment. The end result is that those people settle over there and those places become overcrowded. Difference between the number of people who are leaving the country and the number of people who enter narrows down which leads to more demand for food, clothes, energy and homes. This gives rise to shortage of resources. Though the overall population remains the same, it just affects the density of population making that place simply overcrowded.

The last thing that affects overpopulation is lack of Family Planning. Most developing nations have large number of people who are illiterate, live below the poverty line and have little or no knowledge about family planning. Getting their children married at an early age increase the chances of producing more kids. Those people are unable to understand the harmful effects of overpopulation and lack of quality education prompts them to avoid family planning measures.

Choose the correct letter A, B, C or D.

21 What created the first imbalance between the overall birth rate and death rate in populations?

A) The discovery of medicals.
B) Talking about overpopulation.
C) Talking about ecological problems.
D) The discovery of agriculture by our ancestors.

22 What did medical science do?

A) Produced better means of producing food.
B) Combined the increase in food supply with fewer means of mortality.
C) Made many discoveries which were able to defeat a whole range of diseases.
D) Increased the industrial revolution.

23 To what did it lead when families in poverty gave birth to large families?

A) It led to psychological component.
B) They made up high infant mortality rate.
C) It led to the need of more hands to work.
D) It led to consumption of resources.

24 What does changing the place of living affect?

A) It affects the density of population.
B) It makes the place simply overcrowded.
C) It leads to more demand for food, clothes, energy and homes.
D) It gives rise to shortage of resources.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 The discovery of agriculture allowed our ancestors to satisfy their hunger without hunting.

A) True
B) False
C) Not Given

26 Human progress is the biggest reason why birth and death rates doesn't differ nowadays.

A) True
B) False
C) Not Given

27 For thousands of years, people had less children while nowadays, they are born more and more.

A) True
B) False
C) Not Given

28 Many people from UK, USA and Australia fear that they will have to leave because of overcrowding.

A) True
B) False
C) Not Given

29 When the vaccine invented and other medical advancements were made, overpopulation issue simultaneously started to become an issue.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

MAMMOTH KILL 2

Like their modern relatives, mammoths were quite large. The largest known species reached heights in the region of 4 m at the shoulder and weighs up to 8 tonnes, while exceptionally large males may have exceeded 12 tonnes. However, most species of mammoth were only about as large as a modern Asian elephant. Both sexes bore tusks. A first, small set appeared at about the age of six months and these were replaced at about 18 months by the permanent set. Growth of the permanent set was at a rate of about 1 to 6 inches by year. Based on studies of their close relatives, the modern elephants, mammoths probably had a gestation period of 22 months, resulting in a single calf being born. Their social structure was probably the same as that of African and Asian elephants, with

females living in herds headed by a matriarch, whilst bulls lived solitary lives or formed loose groups after sexual maturity.

MEXICO CITY - Although it's hard to imagine in this age of urban sprawl and automobiles, North America once belonged to mammoths, camels, ground sloths as large as cows, bear-sized beavers and other formidable beasts. Some 11,000 years ago, however, these large-bodied mammals and others - about 70 species in all - disappeared. Their demise coincided roughly with the arrival of humans in the New World and dramatic climatic change - factors that have inspired several theories about the die-off. Yet despite decades of scientific investigation, the exact cause remains a mystery. Now new findings offer support to one of these controversial hypotheses: that human hunting drove this megafaunal menagerie to extinction. The overkill model emerged in the 1960s when it was put forth by Paul S. Martin of the University of Arizona. Since then, critics have charged that no evidence exists to support the idea that the first Americans hunted to the extent necessary to cause these extinctions. But at the annual meeting of the Society of Vertebrate Paleontology in Mexico City last October, paleoecologist John Alroy of the University of California at Santa Barbara argued that, in fact, hunting-driven extinction is not only plausible, but it was only unavoidable. He has determined, using a computer simulation, which even a very modest amount of hunting would have wiped these animals out.

Assuming an initial human population of 100 people that grew no more than 2 percent annually, Alroy determined that if each band of, say, 50 people killed 15 to 20 large mammals a year, humans could have eliminated the animal populations within 1,000 years. Large mammals, in particular, would have been vulnerable to the pressure because they have longer gestation periods than smaller mammals and they're young require extended care.

Not everyone agrees with Alroy's assessment. For one, the results depend in part on population-size estimates for the extinct animals - figures that are not necessarily reliable. But a more specific criticism comes from mammalogist Ross D. E. MacPhee of the American Museum of Natural History in New York City, who points out that the relevant archaeological record contains barely a dozen examples of stone points embedded in mammoth bones (and none, it should be noted, are known from other megafaunal remains) - hardly what one might expect if hunting drove these animals to extinction. Furthermore, some of these species had huge ranges - the giant Jefferson's ground sloth, for example, lived as far north as the Yukon and as far south as Mexico - which would have made slaughtering them in numbers sufficient to cause their extinction rather implausible, he says.

Macphee agrees that humans most likely brought about these extinctions (as well as others around the world that coincided with human arrival), but not directly. Rather he suggests that people may have introduced hyper lethal disease, perhaps through their dogs or hitchhiking vermin, which then spread wildly among the immunologically naive species of the New World. As in the overkill model, populations of large mammals would have a harder time recovering. Repeated outbreaks of a hyper disease could thus quickly drive them to the point of no return. So far MacPhee does not have empirical evidence for the hyper disease hypotheses, and it won't be easy to come by hyper lethal disease would kill far too quickly to leave its signature on the bones themselves. But he hopes that analyses of tissue and DNA from the last mammoths to perish will eventually reveal murderous microbes.

The third explanation for what brought on this North American extinction does not involve human beings. Instead, its proponents blame the loss on the water. The Pleistocene epoch witnessed considerable climatic instability, explains palaeontologist Russell W. Graham of the Denver Museum of Nature and Science. As a result, certain habitats disappeared, and species that had once formed communities split apart. For some animals, this change brought opportunity. For much of the megafauna, however, the increasingly homogeneous environment left them with shrinking geographical ranges - a death sentence for large animals, which need large ranges. Although these creatures managed to maintain viable populations through most of the Pleistocene, the final major fluctuation - the so-called Younger Dryas event - pushed them over the edge, Graham says.

For his part, Alroy is convinced that human hunters demolished the titans of the Ice Age. The overkill model explains everything the disease and climate scenarios explain, he asserts, and makes accurate predictions about which species would eventually go extinct. "Personally, I'm a vegetarian," he remarks, "and I find all of this kind of gross - but believable."

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

COMPETING EXPLANATIONS FOR MAMMOTH EXTINCTION

The reason why giant mammals became extinct 11,000 years ago is under hot debate. The first explanation is that **30**_____ of human-made pressure caused it. Another assumption promoted by MacPhee is that deadly **31**_____ from human causes their demises. However, his hypothesis required more **32**_____ evidence to testify its validity. Graham proposed a third hypothesis that climatic **33**_____ in Pleistocene epoch drove some species disappear.

Choose the correct letter A, B, C or D.

34 **In this passage, Russell W. Graham argues that ...**

A) doubt raised through the study of several fossil records.
B) human hunting well explained which species would finally disappear.
C) climate shift is the main reason for extinction.
D) illness rather than hunting caused extensive extinction.

35 **In this passage, the writer ...**

A) argues that instead of hunting mammoths into extinction, they were dead on their own.
B) criticizes the role of human nature on mammoths' die-off.
C) praises the work of mammologists and other scientists on mammoth study field.
D) acknowledges the different views about mammoths' eventual extinction.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

ANIMAL BEHAVIOR AND GENES

Have you ever wondered why animals act the way they do? Their genes play a huge role in shaping their behavior. All the (1)**Q1** _____ together act like a big book of instructions. They tell the body what to do and the mind how to behave. There are different versions of the same gene; each version comes from (2)**Q2** _____ parent. These variants can affect things like the color of the eyes or the texture of the hair. They can also (3)**Q3** _____ memory and how the animals respond to their surroundings. Imagine these variants like having two apps on your phone for doing the same task, like for listening to music.

But here's the fascinating part: it's not just about having these genes. The environment around them can switch these genes on or off. Think about it like using one of the music apps for streaming and the other for listening to downloaded songs. If you have a good internet connection (environment), it is better to use the first app. Where there is poor (4)**Q4** _____ connection (different environment), you prefer the other (5)**Q5** _____

We call the on- and off-switches epigenetics. This is like an extra layer on top of genes that can also change how animals behave. For instance, when rat moms take care of their babies, it can change how their (6)**Q6** _____ act when they grow up and become moms themselves. So, the environment plays a big role in behavior, too!

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You need a Victorian apartment with a single bed.

B) The buyer becomes a member on this site.

C) These apartments are suitable for romantic couples.

D) You want to escape to a beautiful countryside.

E) You want something closer to the underground.

F) You want to live in a villa near the coast.

G) A fully serviced retirement home.

H) You can buy an apartment which is located in a historical site.

I) These eastern houses are designed unique.

J) These houses are near a river and a forest.

7

Q7

SHEPHERD'S BUSH NO CHAIN £699,950 Recently refurbished 5 bed-room Victorian 3 storey, bay fronted house finished to an exceptional standard. 5 mins to underground. Viewing highly recommended. Contact: 07802 23577

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) potential threat to buildings and crops despite of benefit
B) the cycle of sand moving forward with wind
C) the most common sand type.
D) scientists simulate sand move and build model in lab
E) sand composition explanation
F) singing sand dunes
G) other types of sand dunes
H) reasons why sand dunes form

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

SAND DUNES

I. One of the main problems posed by sand dunes is their encroachment on human habitats. Sand dunes move by different means, all of them aided by the wind. Sand dunes threaten buildings and crops in Africa, the Middle East, and China. Preventing sand dunes from overwhelming cities and agricultural areas has become a priority for the United Nations Environment Program. On the other hand, dune habitats provide niches for highly specialized plants and animals, including numerous rare and endangered species.

II. Sand is usually composed of hard minerals such as quartz that cannot be broken down into silt or clay. Yellow, brown and reddish shades of sand indicate their presence of iron compounds. Red sand is composed of quartz coated by a layer of iron oxide. White sands are nearly pure gypsum. Sand with a high percentage of silicate can be used in glassmaking. Sandstone is created by sand, mixed with lime, chalk or some other material that acts as a binding agent, that is deposited in layers at the bottom of a sea or other area and pressed together into rock by the great pressure of sediments that are deposited on top of it over thousands or millions of years.

III. The most common dune form on Earth and on Mars is crescentic. Crescent-shaped mounds are generally wider than they are long. The slipfaces are on the concave sides of the dunes. These dunes form under winds that blow consistently from one direction, and they also are known as barchans or transverse dunes. Some types of crescentic dunes move more quickly over desert surfaces than any other type of dune. A group of dunes moved more than 100 metres per year between 1954 and 1959 the China's Ningxia Province, and similar speeds have been recorded in the Western Desert of Egypt. The largest crescentic dunes on Earth, with mean crest-to-crest widths of more than 3 kilometres, are in China's Taklamakan Desert.

IV. Radially symmetrical, star dunes are pyramidal sand mounds with slipfaces on there or more arms that radiate from the high center of the mound. They tend to accumulate in areas with multidirectional wind regimes. Star dunes grow upward rather than laterally. They dominate the Grand Erg Oriental of the Sahara. In other deserts, they occur around the margins of the sand seas, particularly near topographic barriers. In the southeast Badain Jaran Desert of China, the star dunes are up to 500 metres tall and may be the tallest dunes on Earth. Straight or slightly sinuous sand ridges typically much longer than they are wide are known as linear dunes. They may be more than 160 kilometres (99 mi) long. Some linear dunes merge to form Y-shaped compound dunes. Many forms in bidirectional wind regimes. The long axes of these dunes extend in the resultant direction of sand movement. Linear loess hills known as pahas are superficially similar.

V. Once sand begins to pile up, ripples and dunes can form. Wind continues to move sand up to the top of the pile until the pile is so steep that it collapses under its own weight. The collapsing sand comes to rest when it reaches just the right steepness to keep the dune stable. This angle, usually about 30-34°, is called the angle of repose. Every pile of loose particles has a unique angle of repose, depending upon the properties of the material it's made of, such as the grain size and roundness. Ripples grow into dunes with the increase of wind and sand input.

VI. The repeating cycle of sand inching up the windward side to the dune crest, then slipping down the dune's slip face allows the dune to inch forward, migrating in the direction the wind blows. As you might guess, all of this climbing then slipping leaves its mark on the internal structure of the dune. The image on the right shows fossil sand dune structure preserved in the Merced Formation at Fort Funston, Golden Gate National Recreation Area. The sloping lines or laminations you see are the preserved slip faces of a migrating sand dune. This structure is called cross-bedding and can be the result of either wind or water currents. The larger the cross-bedded structure, however, the more likely it is to be formed by wind, rather than water.

PART 4

Questions 21–29

Read the following text for question 21-29.

CHLOE KELLING INTERVIEW

I arrive for my interview with Chloe Kelling and I'm asked to wait in the garden. I hardly have time to start looking round at the carefully tended flowerbeds when Chloe appears. Every bit as tall and striking as I'd expected, Chloe emerges from the house wearing an oversized man's jacket, a delicately patterned top and jeans. Chloe is known for her slightly quirky sense of fashion

and, of course, she looks great as she makes her way towards me through the flowerbeds.

'Let's talk in my office,' she says, leading the way not back to the house, but instead to an ancient caravan parked up next to it. As we climb inside the compact little van, the smell of fresh baking greets us. A tiny table is piled high with cupcakes, each iced in a different colour. Chloe's been busy, and there's a real sense of playing tea parties in a secret den! But what else should I have expected from a woman with such a varied and interesting career?

Chloe originally trained as a make-up artist, having left her home in the country at nineteen to try and make her name as a model in London, and soon got work in adverts and the fashion business. 'I went to Japan to work for a short period, but felt very homesick at first,' she recalls. 'It was very demanding work and, though I met loads of nice people, it was too much to take in at nineteen. If I'd stayed longer, I might have settled in better.'

Alongside the modelling, Chloe was also beginning to make contacts in the music business. 'I'd been the typical kid, singing with a hairbrush in front of the mirror, dreaming of being a star one day,' she laughs. She joined a girl band which 'broke up before we got anywhere', before becoming the lead singer with the band Whoosh, which features on a best-selling clubbing album. Unusually though, Chloe also sings with two other bands, one based in Sweden and another in London, and each of these has a distinct style.

It was her work with Whoosh that originally led to Chloe's link with Sweden. She was offered a song-writing job there with a team that was responsible for songs for some major stars, but gradually became more involved in writing music for her own band.

Although she now divides her time between London and Sweden, her first stay there turned out to be much longer than she'd bargained for. 'The rooms are very tall over there and so people have these rather high beds that you climb up to,' she explains. 'I fell as I climbed up the ladder and cracked three ribs. Although the people at the hospital were very kind, I was stuck there for a while, which was very frustrating. Sneezing and laughing were so painful at first, let alone singing!'

It was while recovering from her injuries that Chloe hit upon the idea of staging what she calls vintage fairs. 'It was snowing in Sweden and I wanted something nice to look forward to.' Chloe had always loved vintage clothes, particularly from the 1950s, and decided to stage an event for others who shared her passion. The first fair was held in her home village and featured stalls selling all sorts of clothes and crafts dating back to the 1950s. It was a huge hit, with 300 people turning up.

'When I had the idea of the first fair, it was only meant to be a one-off, but we had so many compliments, I decided to go ahead with more,' says Chloe. 'There's something for all ages and people find old things have more character than stuff you buy in modern shops. It also fits perfectly with the idea of recycling.' Looking round Chloe's caravan, I can see what she means.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 What does Chloe say about her trip to Japan?

A) She soon got used to her life there.
B) She felt lonely most of the time there.
C) She wishes she'd done the work better.
D) She wasn't old enough to appreciate it fully.

22 In the fourth paragraph, we find out that Chloe

A) gave up modelling to become a singer.
B) had always had ambitions to be a singer.
C) has now left the first successful band she joined.
D) sings in three bands that have a very similar sound.

23 Chloe ended up in hospital in Sweden after

A) breaking a rib whilst trying to move her bed.
B) hurting her leg in a fall from her bed.
C) falling off a ladder in her bedroom.
D) tripping over in her room at night.

24 What does Chloe say about her 'vintage fairs'?

A) Her main aim is to raise awareness of environmental issues.
B) She has responded to positive feedback from customers.
C) Certain shops are now showing interest in the idea.
D) They are mostly popular with older people.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 When Chloe was modelling, she was also in the music business.

A) True
B) False
C) Not Given

26 When she traveled Japan for the first time, she missed her home very much.

A) True
B) False
C) Not Given

27 When she was in Sweden, she bought jackets.

A) True
B) False
C) Not Given

28 She traveled a lot with her music band.

A) True
B) False
C) Not Given

29 She has always wanted to stage vintage fairs.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

HENRY PROGRAM

City's Henry programme gives children choices while helping parents stay in the driving seat

Leeds has become the first city in the UK to report a drop in childhood obesity after introducing a programme called 'Henry'

to help parents set boundaries for their children and put them off sweets and junk food. Only a few cities in the world, notably Amsterdam, have managed to cut child obesity. As in Amsterdam, the decline in Leeds is most marked among families living in the most deprived areas, where the problem is worst and hardest to tackle.

'The improvement in the most deprived children in Leeds is startling,' said Susan Jebb, a professor of diet and population health at Oxford University, whose team has analysed the city's data. Over four years, obesity has dropped from 11.5% to 10.5% and the trajectory is steadily downwards. Among the more affluent families, there was also a decline from 6.8% to 6%. Overall the drop was from 9.4% to 8.8%. The data comes from the national child measurement programme (NCMP), which requires all children to be weighed at the start and end of primary school. The biggest decline in obesity in Leeds is 6.4% in the reception class, at about the age of four.

No such data has been reported elsewhere in the UK, where childhood obesity is a major concern. The measurement programme shares the progress made in each city with those considered comparable. For Leeds, the 15 closest 'neighbours' at the start of its study period in 2009 were Sheffield, Kirklees, Bristol, Newcastle upon Tyne, Coventry, Bolton, Wakefield, Derby, Bradford, Dudley, Medway, Liverpool, Swindon, County Durham and Warrington. The obesity rates there and across the country have not shifted. Susan Jebb added that the dropping rate in Leeds appeared to be a trend. 'This is four years, not one rogue data point,' she said at the European Congress on Obesity in Glasgow where she presented the research.

Jebb, a former government adviser, says they cannot be sure what has turned the tide in Leeds - but it could involve a programme called 'Henry' that the city introduced as the core of its obesity strategy in 2009, focusing particularly on the youngest children and poorest families. 'Henry' (Health, Exercise, Nutrition for the Really Young) supports parents in setting boundaries for their children and taking a positive stance on issues from healthy eating to bedtimes.

'Henry's' chief executive, Kim Roberts, said the drop in obesity in Leeds was 'unprecedented ... The indicators are that this isn't happening in other cities'. The programme encourages authoritative rather than authoritarian parenting, she said. 'Authoritarian parenting is when children are told what to eat and what to do, such as being banned from leaving the table until they have eaten their sprouts,' said Roberts. 'Permissive parenting is asking children what they want to do. But 'Henry' encourages a third approach known as authoritative parenting, where parents make it clear they are in charge, but also respond to their children.' Instead of being asked what vegetable they want with dinner, children might be asked whether they would like carrots or broccoli. Instead of being told to go to bed, they are asked where they want to read their story beforehand.

Lisa, who joined a 'Henry' parenting course when her oldest daughter was two, is enthusiastic about her family's experience of the programme. She learned a lot about healthy eating, saved money by planning meals and lost two stone herself. 'I think it made me a better parent because of all the parenting skills stuff. I was able to share some of the ideas with my partner and as a result the kids became calmer and happier, which helped us feel less stressed too,' she said.

Janice Burberry, the head of public health at Leeds city council, said the early years were a good time to intervene to support families. 'Parents want to do the best for their children,' she said. 'We wanted to focus on prevention because it's very, very difficult when obesity has taken hold to tackle it. We understand that there is no magic bullet here. Parents are experts in their own lives, and they know what they can and can't achieve. The strategy of 'Henry' is about sitting alongside parents and thinking through what's right for them.'

The public health minister, Seema Kennedy, was enthusiastic. 'There are some fantastic pockets of work happening in early years already, and while still in the early phases, it is encouraging to see what can be achieved locally through interventions like this,' she said. 'I know how hard it can be for busy parents to make healthy choices for their families, so anything that can make it easier is a real lifeline.'

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

THE 'HENRY' PROGRAMME

'Henry' was used in Leeds from 2009 in the fight against childhood obesity. The programme focuses on situations such as mealtimes and bedtimes, and it encourages parents to set firm **30** _____ during these periods. According to Kim Roberts, 'Henry' aims to help people become more **31** _____ as parents. In this way, they do not instruct children to do things, nor give them total freedom of choice as in a **32** _____ parenting style. Instead, they allow children to make some decisions for themselves. This might be a choice of vegetable at the dinner table or a decision about where a **33** _____ should be enjoyed in the evening.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **According to the writer, the NCMP data indicate that**

A) children should be weighed more frequently.
B) most primary school children need to lose weight.
C) children from wealthy families have less weight to lose than others.
D) the youngest children show the highest levels of weight loss.

35 **Which title is the most suitable for the text?**

A) A look at what 'Henry' has achieved in Leeds
B) 'Henry's the best,' according to Leeds children
C) Leeds parents discuss how 'Henry' has helped them
D) It's all about saying 'no', according to 'Henry'

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

A PICNIC ON STARFISH ISLAND

Last weekend, my family and I took a small boat to a beautiful island. The **Q1**_____ was known for its soft sand and clear blue waters. As we arrived, we found the perfect place to set up our picnic under a shady tree near the shore. Children played on the **Q2**_____, building castles and collecting starfish. The **Q3**_____ were bright orange and lay gently on the wet sand. We reminded the kids to look but not touch, as the starfish are living creatures. After enjoying our **Q4**_____, we took a walk around the island. We discovered another quiet **Q5**_____ where the sand was even softer, and the view of the sea was breathtaking. We watched as a small **Q6**_____ passed by, its sail catching the wind. It was a wonderful day filled with laughter, nature, and the simple joys of a family picnic on a peaceful island.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A place where people can come together to enjoy live music, socialize, and dance the night away.

B) A group of passionate individuals who train together, honing their skills in teamwork and goal scoring.

C) A place where players of all levels come together to challenge themselves physically and mentally, enjoying the camaraderie of fellow tennis enthusiasts.

D) A place where the sound of shuttlecocks hitting rackets and friendly competition fill the air.

E) A group of graceful individuals who express themselves through movement and rhythm, learning various dance styles and performing with passion and precision.

F) A group of adventurous individuals who enjoy exploring the great outdoors and tackling challenging hikes.

G) A group of skilled craftspeople who gather to create beautiful and functional objects using traditional techniques.

H) A group of dedicated athletes who work hard to perfect their strokes and improve their endurance in the water.

I) A haven for finding inner peace through stretching, breathing, and relaxation.

J) A disciplined group where students learn self-defense techniques, improve their fitness, and gain confidence through rigorous training.

7

Q7

The badminton club is a lively place, filled with the sound of shuttlecocks hitting rackets and the friendly chatter of players. They play on a court, moving quickly and strategically to hit the shuttlecock over the net. It's a great way to get some exercise, improve your reflexes, and enjoy some friendly competition.

8

Q8

The yoga studio is a peaceful haven, where people come to stretch their bodies and calm their minds. The instructor guides the class through a series of poses, focusing on breathing and relaxation. It's a great way to build strength and flexibility, while also finding a sense of inner peace.

9

Q9

The football club is a passionate group, full of energy and enthusiasm for the sport. They practice on a field, honing their skills in passing, shooting, and teamwork. It's a great way to get involved in a team sport, learn valuable life skills, and enjoy the thrill of scoring goals.

10

Q10

The swimming club is a group of dedicated athletes, who train hard to improve their strokes and endurance. They practice in a pool, gliding through the water with grace and efficiency. It's a great way to get a full-body workout, improve your fitness, and learn valuable water safety skills.

11

Q11

The tennis club is a competitive group, where players of all levels come together to test their skills. They play on a court, rallying back and forth with powerful shots and clever tactics. It's a great way to challenge yourself physically and mentally, while also enjoying the camaraderie of other tennis enthusiasts.

12

Q12

The hiking club is a group of adventurous souls, who love to explore the outdoors. They hike through forests, mountains, and valleys, enjoying the beauty of nature and the challenge of a good trek. It's a great way to stay active, get fresh air, and connect with the natural world.

13

Q13

The martial arts club is a disciplined group, where students learn the techniques and philosophy of their chosen art. They practice self-defense skills, improve their fitness, and gain confidence through rigorous training. It's a great way to learn a new skill, challenge yourself physically and mentally, and find a sense of purpose.

14

Q14

The dance club is a group of graceful individuals, who express themselves through movement and rhythm. They learn various dance styles, from ballroom to hip hop, and perform with passion and precision. It's a great way to improve your coordination, build confidence, and enjoy the beauty of movement and music.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Reasons to be afraid
B) Fight your fear
C) A place of wonders
D) How to say thank you
E) Visiting for wild life and animals
F) Learn to be grateful
G) It's never late to learn
H) Reading non-verbal language

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

THOUGHTS, FEARS, AND WONDERS OF LIFE

15. Nowadays when it's all too easy to send an email or text, the best way to show that you are grateful to somebody is to actually mail a hand-written card. The person who gets it will know you took the extra time and thought to write a card and put it in the mail with a nice stamp. That person will appreciate your efforts much more. Plus, you'll get the added bonus of feeling grateful a little longer than usual as you write out each note and wait for it to arrive.

16. Music is a noble passion, and people who can play a musical instrument have always been seen as intelligent people. Learning how to play a musical instrument is far more efficient if you do it in childhood. However, there are millions of adults who learn to enjoy music throughout their lives. Moreover, they don't focus on just one instrument, but specialize in two or even more, if they have the time and the necessary ambition.

17. Millions of people avoid air travel each year because of their fear of flying. The fear of accidents happening is probably the most common fear among air travellers. It is an understandable fear, since there have been many aviation accidents throughout history. Some people may have a fear that the plane has some type of malfunction or breakdown, while others may have a fear that the weather or turbulence will affect the plane.

18. Try to understand that being scared is just an illusion that makes you limited and miserable. Take control of your mind and don't let your imagination create frightening pictures in your head. If you cannot deal with it, you should make attempts to leave your comfort zone. Choose things and activities you are afraid of and meet your worries face to face, because it is impossible to run away from them. Just face your troubles no matter how powerful they may seem.

19. When you get chronically bored with something, your mind gets used to seeing the world negatively. It is necessary to break the chain of negative thoughts and train your mind to notice the best. Just write down 5 things you are thankful for. This way, your mind will change for the better in a while. The thankfulness will open your eyes to the beauty of the world around you and will help you to focus on positive moments in your life.

20. If you go to Ireland, go to isolated distant places in the country, talk to the locals and they will tell you the stories about the mythical Irish place, called the Otherworld. They believe that it is the land of paradise and happiness. In Irish poetry and tales, it is described as a series of islands near Ireland where the various fairytale creatures lived. Also the Otherworld seemed to be able to move from one location to another.

PART 4

Questions 21–29

Read the following text for question 21-29.

OUTDOOR EXERCISE

In an age of gym memberships, online fitness classes, and high-tech workout machines, many people have rediscovered a much simpler and more natural way to stay healthy—exercising outdoors. Whether it's jogging through a park, hiking in the mountains, cycling along a countryside path, or simply doing yoga in a quiet garden, outdoor exercise is gaining popularity around the world. Advocates claim it improves not just physical health, but mental and emotional well-being as well.

One of the major benefits of outdoor exercise is its impact on mental health. Numerous studies have shown that spending time in natural environments helps reduce stress, anxiety, and symptoms of depression. Exposure to natural light stimulates the production of serotonin, a chemical in the brain that promotes a positive mood. In contrast, indoor environments—especially those with artificial lighting and poor ventilation—can feel restrictive and may even increase feelings of fatigue and boredom during workouts.

In terms of physical health, outdoor activities often provide more diverse movements than indoor workouts. For example, running on a trail with natural inclines, uneven surfaces, and obstacles engages different muscle groups and improves balance more than running on a treadmill. Moreover, outdoor exercise often combines both cardiovascular and strength training without the need for machines. It also encourages people to stay active for longer periods, especially when they are distracted by scenic views or social interaction.

Indoor exercise, however, offers its own unique advantages. Gyms provide controlled environments where individuals can work out regardless of the weather. Equipment like treadmills, stationary bikes, and weight machines allow for targeted

training. In addition, many people find motivation through structured fitness classes or personal trainers. For beginners or those with physical limitations, indoor spaces can offer safer and more manageable routines.

Nevertheless, outdoor workouts are often more cost-effective and accessible. No membership is required to walk through a forest or run in a park. People of all ages and fitness levels can participate without the need for expensive gear. Outdoor exercise also fosters a stronger connection to the environment and one's community. Group hikes, running clubs, and outdoor boot camps are becoming increasingly popular in urban areas, providing both fitness and social benefits.

Experts suggest that combining both types of exercise—indoor and outdoor—may be the most effective approach. While indoor training allows for consistency and goal-based tracking, outdoor workouts offer variety and mental refreshment. The key is to create a balanced routine that suits one's lifestyle, preferences, and health goals. Seasonal changes and location may also affect which option is more practical at different times of the year.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 **According to the passage, what is one major psychological benefit of exercising outdoors?**

A) Improved ability to set goal-based targets
B) Higher production of serotonin that lifts mood
C) Greater accuracy in tracking workout data
D) Guaranteed reduction in physical fatigue

22 **Which statement best explains why trail running may develop more muscle groups than treadmill running?**

A) Trails motivate people to run faster than treadmills do.
B) Natural inclines and uneven ground activate additional stabilising muscles.
C) Treadmills restrict the length of a workout session.
D) Treadmills provide less cushioning than outdoor surfaces.

23 **The passage lists which of the following as an important advantage of indoor exercise?**

A) Lower long-term cost
B) Better air quality than the outdoors
C) Freedom from weather interruptions
D) Higher calorie burn per minute

24 **What overall recommendation do experts give at the end of the text?**

A) Focus on indoor training during winter and outdoor training during summer.
B) Alternate weekly between indoor and outdoor workouts to avoid boredom.
C) Combine indoor and outdoor exercise to create a balanced routine.
D) Choose outdoor exercise unless you have serious physical limitations.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **Exposure to natural light can stimulate the brain chemical serotonin.**

A) True
B) False
C) Not Given

26 **Outdoor exercise is always less expensive than purchasing a gym membership.**

A) True
B) False
C) Not Given

27 **The passage suggests that some indoor environments may feel restrictive and lead to boredom.**

A) True
B) False
C) Not Given

28 **Indoor facilities can be safer and easier for beginners or people with physical limitations.**

A) True
B) False
C) Not Given

29 **According to the text, outdoor boot camps are becoming less popular in most large cities.**

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

FALCONS: MASTERS OF PRECISION HUNTING

Falcons are known for their exceptional speed, vision, and hunting skills. Unlike many other birds of prey, they do not rely solely on surprise or brute strength; instead, they use high-altitude flight, aerial dives, and astonishing precision to catch their prey mid-air. These characteristics make falcons, particularly peregrine falcons, some of the most efficient hunters in the bird kingdom.

One of the most remarkable features of a falcon is its beak structure. While most birds of prey have strong, curved beaks for tearing flesh, falcons possess a special 'tomial tooth'—a sharp notch on the side of their upper beak. This allows them to kill prey instantly by severing the spinal cord at the neck. Unlike hawks or eagles, which often use their powerful talons to crush or immobilize prey, falcons rely more on their beak for the kill. This makes their hunting technique both cleaner and faster. Falcons usually hunt small- to medium-sized birds, such as pigeons, doves, and starlings. They are also known to eat small mammals, including mice and bats, depending on availability. Their diet is strictly carnivorous, and they prefer fresh, warm meat. A falcon rarely eats carrion, as it prefers to catch its food alive using speed and surprise. While hunting, a falcon can reach speeds of over 300 km/h during a stoop—a high-speed dive used to strike prey in flight.

What distinguishes falcons from other birds of prey is their unique flight strategy. Many raptors soar or glide to locate prey below. Falcons, however, often hunt at high altitudes, then dive steeply toward the target. This vertical dive gives them both speed and force, allowing them to knock prey unconscious or dead instantly. Their long, pointed wings and streamlined bodies are perfectly adapted for this purpose. Moreover, their nostrils have bony structures that prevent damage from intense air pressure during dives—a feature not seen in most other birds.

After a successful hunt, falcons usually retreat to a quiet perch—a tree branch, cliff edge, or high tower—where they consume

their meal undisturbed. They prefer solitude while eating and may cache leftovers for later consumption. Falcons eat around once or twice a day, depending on the energy spent and the size of the prey.

Despite being high-energy hunters, falcons know when to rest. They conserve energy during the heat of the day by perching in shaded areas, often motionless for hours. This not only helps them avoid overheating but also allows them to recover strength for the next hunt. During molting season or poor weather, falcons reduce their activity significantly and rely on stored body fat. Some species, like the saker falcon, have been observed sleeping for short intervals during the day, though they remain alert to any danger.

In summary, falcons are finely tuned predators that combine physical adaptations with behavioral intelligence. Their unique use of the tomial tooth, extreme dive speed, and calculated resting habits set them apart from other birds of prey. Every aspect of a falcon's life—from how it hunts to how it rests—is designed for efficiency, precision, and survival.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

FALCONS

Falcons use a sharp structure on their beak called a (30)**30** _____ to kill prey quickly. During a high-speed dive, falcons can reach speeds over (31)**31** _____ kilometers per hour. A physical feature in a falcon's nose protects it from damage caused by high (32)**32** _____. Falcons usually rest in the shade to avoid excessive (33)**33** _____ during hot periods.

For questions 34-35, choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

34 How does a falcon's hunting style differ from that of most other birds of prey?

A) It uses stronger talons instead of its beak
B) It attacks prey while gliding from low altitudes
C) It dives vertically at high speed to hit prey mid-air
D) It relies on group coordination to corner prey

35 What is the main idea of the passage?

A) Falcons are social hunters that rely on teamwork and vocal calls
B) Falcons' behavior and body are adapted for precision and survival
C) Falcons are less efficient than hawks but faster than eagles
D) Falcons rely on talon strength rather than specialized beaks

OLIVIA AND SMALL TOWNS

Traveling gives Olivia joy and a sense of freedom. She prefers exploring a small town rather than a busy city. Olivia says every **Q1**_____ has its own story, culture, and charm. The town she went to last summer was quiet, beautiful, and full of friendly people.

Olivia enjoys meeting **Q2**_____ and hearing about their lives. She also loves taking photos of interesting places like old markets, narrow streets, and traditional houses.

During her trip, she took a lot of **Q3**_____ and wrote in her journal every evening. The **Q4**_____ helped her remember the details of her journey and how each moment made her feel. She also made short videos about the culture and traditions of the town she stayed in.

Olivia believes that when you travel slowly and observe carefully, you can learn a lot. She often travels alone, but she never feels lonely in small towns. She says when she travels to a **Q5** _____, people are too busy to talk. But when she visits a small town, people invite her to their homes and treat her like family.

She is already planning her next **Q6**_____. This time, she hopes to explore another peaceful place, meet more kind-hearted people, and add new stories to her journal.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You want an authentic cooking class to learn local recipes and techniques.

B) You want a guided hiking tour through scenic mountains with a local expert.

C) You want to learn to play traditional instruments with skilled musicians in your area.

D) You want a small-group photography workshop focusing on capturing local architecture.

E) You want a relaxing painting retreat with professional instruction.

F) You want to volunteer on a local farm, helping with daily tasks and learning about agriculture.

G) You want a weekend pottery course to create and decorate your own ceramic pieces.

H) You are looking for a place to hold your child's birthday party with fun interactive activities.

I) You want to practice your foreign language skills with native speakers in an informal setting.

J) You want a short dance workshop featuring local folk dances.

7

Q7

Mountain Spice Cookery

Short, hands-on cooking sessions highlighting our region's well-known dishes. Each class includes a local market visit and step-by-step guidance from an experienced chef.

8

Q8

Peak Discovery Hikes

Enjoy an unforgettable half-day trek in the nearby mountains. Our certified guide will lead you through scenic routes, identifying local flora and fauna. All fitness levels welcome.

9

Q9

TradBeats School

Join our weekend program and learn to play heritage instruments from master musicians. Small groups, friendly atmosphere, and all materials provided.

10

Q10

Frames & Angles Workshop

This specialized course focuses on photographing our historic old-town buildings. Perfect for anyone keen to refine architectural photography skills.

11

Q11

Clay Art Retreat

Two-day pottery course teaching basic techniques, glazing, and firing. Suitable for beginners or those wanting to polish their craft.

12

Q12

HappyKids Events Center

An indoor-and-outdoor celebration zone offering mini-golf, karaoke, face painting, and other child-friendly activities. Party packages available year-round!

13

Q13

Brush & Calm Studio

Immerse yourself in a tranquil painting retreat under the guidance of a professional artist. Capture our region's beautiful landscapes in a relaxed setting.

14

Q14

LinguaMeet Cafe

Casual language exchange evenings. Practice speaking foreign languages with locals and travelers in a friendly, comfortable environment. Free admission.

List of Headings:

A) One product — many dishes
B) Simple to prepare
C) Once local — now global
D) Good for everyone
E) More than food
F) Impossible to grow
G) Synonymous to food
H) Different table manners

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

RICE

15. Over the centuries, rice has become a part of the traditions of many cultures. In some societies, it is traditional to throw a handful of rice on newlywed couples, symbolizing the wish for a large family and prosperity. In India, rice is traditionally the first food that bride offers her new husband. It is typical for people to leave offerings of rice in Buddhist temples. In Thailand, the annual Royal Plowing Ceremony has taken place in front of the Grand Palace in Bangkok for seven centuries.

16. The basic recipe for cooking rice is easy. First you need to bring 2 cups of water to boil. When the water is boiling, add 1 cup of rice. Cover the pot. As soon as the water boils again, reduce the heat. Let the rice cook for 15 to 20 minutes. The rice is ready when all the water is absorbed. It's now possible to buy rice cooking machines that cook perfect rice every time, especially in large quantities. This is particularly helpful in Asian cultures, where families often eat rice with every meal. In these countries, rice is also used to make pancakes, sweets and wine — indeed almost anything!

17. Rice is the primary source of nutrition for more than half of the world's population. Countries as different as Japan, India, Nigeria and Mexico use rice in their national cuisine. In Chinese, the word for rice is the same as the word for food. And in Thailand, when you call your family to a meal, you say 'eat rice.' So it's easy to understand why the 2008 global rice shortage was a real crisis for billions of people. In some countries the shortage led to big price increases. Some governments had to control the sale of rice.

18. Many people consider rice to be one of the healthiest possible food choices. It has no sodium or cholesterol, and almost no fat. One half cup of rice has approximately 100 calories, and those calories are rich in important vitamins and minerals, including folic acid, iron and zinc. Many athletes eat rice because as a carbohydrate it is a great source of energy. Rice even has certain chemicals in it that are supposed to improve your mood. Brown rice is the healthiest of all because it is 100% grain.

19. Archeologists believe that rice has been grown as a source of food for at least 4000 years. It was first grown in China, and then introduced to India. Over the centuries the practice of growing rice has spread literally across the globe. Today rice is grown in Peru, Egypt, and even the United States, but over 90% of the world's rice is still grown in Asian countries. Rice is best grown in wet, sub-tropical climates, and in many countries it is still cultivated using intensive human and animal labor. For this reason, large families are still typical, and the water buffalo is a valued possession.

20. One of the amazing things about rice is how adaptable it is. It is an essential ingredient in cuisines all around the world — cuisines as different as Japanese, Mexican, and West African. The Japanese combine sticky rice with raw fish to create numerous varieties of sushi. Mexican rice, flavored with cumin and tomatoes, is a colorful side dish. Every country in West Africa has its own version of a regional rice dish called jollof, often served with fried plantain, a kind of banana.

PART 4

Questions 21–29

Read the following text for question 21-29.

DEADLY CROP

When the war in Afghanistan began last year, Fahzel Rahman went to his cellar and got some tiny yellow seeds. He planted the seeds in his garden. Now he has a garden full of poppy plants. "You'd be stupid not to grow opium," he said, looking at the plants growing out of the dry earth. "If the Americans give us some money, we'll stop planting poppy." Mr Rahman lives in Singesar, a dusty village near the southern desert city of Kandahar. The village is famous because Mullah Mohammed Omar, the Taliban's leader, lived here in the past. Two years ago Mullah Omar stopped opium production in Afghanistan, which was then the world's largest producer of heroin. "I grew tomatoes and other garden vegetables last year," Mr Rahman said. United Nations officials last month said that poppy production in Afghanistan fell by 91% last year from 82,172 hectares to 7,606. But now that the Taliban's rule has ended, farmers all over Afghanistan have begun to plant poppy seeds again. "I can make $1,600 from this small poppy field here," Mr Rahman said, pointing to his small kitchen garden. "If I sell all of the grapes over there, I'll only make a fraction of that," he added. Another opium farmer, Abdul Ali, says that the harvest season between May and July is a happy time in Singesar. "We all collect the poppy resin together, including the children. Even women do it, because the crop grows very high and nobody can see their faces. We are pleased to have the money." Stopping the production of opium is one of the first big tests for Hamid

Karzai, leader of Afghanistan's new government. He says he is against drugs and wants all poppy production to stop. But he does not control the whole country, his government does not have much money and people are not afraid of the new police authorities in the same way that they were afraid of the Taliban. United Nations officials think that Afghanistan will produce an enormous opium crop this year. Mr Karzai's local representatives are doing their best. This month Kandahar's new governor, Gul Agha, closed down the city's opium bazaar. "There is nothing left for us now but to sit and drink tea," said Shau Ali, 35, sitting on the carpet of his empty shop. "We are very sad because we don't have a job any more. We are asking the government to let us sell our remaining stocks of opium." Mr Ali said a kilogram of opium now costs between $2,200 and $2,700, down from last year's price of $3,300 when there was no prospect of a new crop this year. Gul Agha knows that if he tells his officials to dig up the poppy fields, he will be very unpopular with the farmers. They have already planted this year's crop so it is too late to change the situation. Now that the Taliban are gone, it will be difficult to stop the production of opium in Afghanistan. Three years ago, the opium trade was worth $98m to Afghanistan's farmers. Most of the people who buy the opium are rich businessmen from Iran and Pakistan. Opium has grown in Afghanistan since the time of Alexander the Great. It needs little water and grows easily in the dry climate. Not many people believe that Mr Karzai can stop its production.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 **According to the text, what was Mullah Mohammed Omar's action two years ago?**

A) He encouraged farmers to plant opium.
B) He made growing tomatoes compulsory.
C) He ordered a complete ban on opium production.
D) He offered financial help to poppy farmers.

22 **Why do many farmers in Afghanistan choose to plant poppy rather than other crops?**

A) Poppy seeds are easily available in cellars.
B) The Taliban demands that they grow poppy.
C) They can make much more money from poppy.
D) Grapes need more water to grow.

23 **Stopping opium production is a big test for Hamid Karzai mainly because ...**

A) the Taliban still controls most of the country.
B) the government lacks money and nationwide authority.
C) poppy does not grow well in the dry climate.
D) United Nations officials do not support him.

24 **According to the text, why might it be difficult to eliminate opium production in Afghanistan?**

A) Farmers are forced by the new governor to plant poppy.
B) Opium production only takes place in one region.
C) It does not bring in enough profit for farmers to care.
D) Opium has been grown there for centuries and needs little water.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **Mr Rahman says he will stop growing poppy if he receives financial support from the Americans.**

A) True
B) False
C) Not Given

26 **The price of opium increased after the fall of the Taliban.**

A) True
B) False
C) Not Given

27 **In Singesar, women do not take part in collecting the poppy resin.**

A) True
B) False
C) Not Given

28 **Hamid Karzai's government has already destroyed all the poppy fields.**

A) True
B) False
C) Not Given

29 **The text says that opium has been grown in Afghanistan since the time of Alexander the Great.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

UNDERSTANDING HARES

Like many herbivores, brown hares spend a relatively large amount of their time feeding. They prefer to do this in the dark, but when nights are short, their activities do spill into daylight hours. Wherever they live, hares appear to have a fondness for fields with a variety of vegetation, for example short as well as longer clumps of grasses. Studies have demonstrated that they benefit from uncultivated land and other unploughed areas on farms, such as field margins. Therefore, if farmers provided patches of woodland in areas of pasture as well as assorted crops in arable areas, there would be year-round shelter and food, and this could be the key to turning round the current decline in hare populations. Brown hares have a number of physical adaptations that enable them to survive in open countryside. They have exceptionally large ears that move independently, so that a range of sounds can be pinpointed accurately. Positioned high up on their heads, the hares' large golden eyes give them 360° vision, making it hard to take a hare by surprise. Compared to mammals of a similar size, hares have a greatly enlarged heart and a higher volume of blood in their bodies, and this allows for superior speed and stamina. In addition, their legs are longer than those of a rabbit, enabling hares to run more like a dog and reach speeds of up 70 kph. Brown hares have unusual lifestyles for their large size, breeding from a young age and producing many leverets (babies). There are about three litters of up to four leverets every year. Both males and females are able to breed at about seven months old,

but they have to be quick because they seldom live for more than two years. The breeding season runs from January to October, and by late February most females are pregnant or giving birth to their first litter of the year. So it seems strange, therefore, that it is in March, when the breeding season is already underway, that hares seemingly go mad: boxing, dancing, running and fighting. This has given rise to the age-old reference to 'mad March hares'. In fact, boxing occurs throughout the breeding season, but people tend to see this behaviour more often in March. This is because in the succeeding months, dusk – the time when hares are most active – is later, when fewer people are about. Crops and vegetation are also taller, hiding the hares from view. Though it is often thought that they are males fighting over females, boxing hares are mostly females fighting off males. Hares are mostly solitary, but a female fights off a series of males until she is ready to mate. This occurs several times through the breeding season because, as soon as the female has given birth, she will be ready to mate again. But how can females manage to do this while simultaneously feeding themselves and rearing their young? The reason is that hares have evolved such self-sufficient young. Unlike baby rabbits, leverets are born furry and mobile. They weigh about 100 g at birth and are immediately left to their own devices by their mothers. A few days later, the members of the litter creep away to create their own individual resting places, known as 'forms'. Incredibly, their mother visits them only once every 24 hours, and even then, she only suckles them for a maximum of five minutes each. This lack of family contact may seem harsh to us, but it is a strategy that draws less attention from predators. At the tender age of two weeks, leverets start to feed themselves, while still drinking their mother's milk. They grow swiftly and are fully weaned at four weeks, reaching adult weight at about six months.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

BROWN HARES

Brown hares generally prefer to feed in the (30)**30** _____. They have a fondness for areas that contain both short and long (31)**31** _____ of grasses. Farmers can help reverse the decrease in hare populations by ensuring year-round (32)**32** _____. A hare's ears can move (33)**33** _____, making it easier to locate sounds.

For questions 34-35, choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

34 **According to the text, why do people often witness 'boxing' among hares in March?**

A) Hares rarely produce any leverets outside of March.
B) They do not hide behind tall plants at that time.
C) They run about in large groups in early spring.
D) They only begin their breeding season in March.

35 **Which of the following is true of leverets?**

A) They are fully grown by the age of three weeks.
B) They remain together until they become adults.
C) They need constant attention from the mother.
D) They start eating vegetation when still very young.

MOCK TEST 36

READING

5 parts · 35 questions

60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

COMPUTERS

A computer is a machine that helps people do many tasks. It can process data, run programs, and show information on a screen. Every **Q1**_____ has parts like a keyboard, screen, and mouse. The **Q2**_____ lets the user type words and numbers into the computer.

Q3_____ use computers at home, in schools, and at work. A user can write documents, play games, or watch videos. Each program on the computer helps the user do something special. For example, one **Q4**_____ may help with drawing, while another helps with math.

The **Q5**_____ shows what the computer is doing. It displays data like pictures, text, and videos. When the user types on the keyboard, the computer takes that **Q6**_____ and shows it on the screen.

In today's world, computers are important tools. They help us learn, work, and have fun.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A bustling hub of activity, where shoppers gather to fill their baskets with everyday essentials and fresh ingredients.

B) A DIY enthusiast's paradise, filled with tools, materials, and expert advice for tackling any home improvement project.

C) Where fashion meets elegance, a place to discover the latest trends and express your unique style.

D) A haven for bookworms seeking solace and adventure within pages.

E) A kaleidoscope of sights, smells, and sounds, a marketplace where you can find anything and everything.

F) A time machine to the past, filled with forgotten treasures and whispered stories of bygone eras.

G) A place where you can enjoy a delicious meal, from fast food to fine dining.

H) A bustling hub of technology, where you can find the latest gadgets and electronic devices.

I) A journey into the world of art, where creativity and beauty are on display for all to appreciate.

J) A sanctuary for caffeine lovers, writers, and artists seeking inspiration and a warm, comforting atmosphere.

7

Q7

Walking into the bookshop feels like entering the past. The shelves are full of old, dusty books that seem to whisper old stories. The smell of aged paper and leather fills the air and invites you to explore. You could spend hours wandering around and finding special or forgotten books.

8

Q8

The market is full of noise, colors, and movement. Sellers shout out prices, bargaining with shoppers. The air smells like fresh fruits, spices, and cooking food. It's a lively, busy place where you can buy everything from exotic fruits to handmade items.

9

Q9

The boutique is perfect for fashion lovers. Stylish clothes and accessories are shown beautifully under soft lighting. The staff are helpful and know fashion well. They're ready to help you choose the best outfit for any event.

10

Q10

The coffee shop is a relaxing place for writers, artists, or anyone who needs coffee. The smell of fresh coffee mixes with quiet conversations. Soft lights and cozy chairs make it a warm spot to enjoy your drink and maybe read a book.

11

Q11

The hardware store is great for people who enjoy fixing things themselves. It's full of tools, paint, and materials for building. The staff know their stuff and are ready to help. It's the ideal place to find everything for home projects.

12

Q12

Entering the art gallery feels magical. The walls are covered with colorful art, sculptures, and photos, each showing the artist's ideas. Soft lighting makes the fine details stand out and helps you admire the talent behind each piece.

13

Q13

The grocery store is always busy. People walk through the aisles, picking up food and daily needs. You hear chatting, carts moving, and cheerful checkout staff. It's a place full of movement and sounds.

14

Q14

The antique store feels like a place full of old memories. You see dusty furniture, vintage items, and old photos that tell silent stories. The air smells like old wood and books. It's the perfect spot to find rare items and add vintage style to your home.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Diseases
B) Habitats
C) Origin of the term
D) Fighting
E) Poisoning
F) Genetics
G) Necessary activities
H) Behaviour

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

CATS

15. The English word 'cat' (Old English catt) is introduced to many languages of Europe from Latin cattus and Byzantine Greek katta, including Portuguese and Spanish gato, French chat, German Katze, Lithuanian kate and Old Church Slavonic kotka, among others. The ultimate source of the word is Afroasiatic, presumably from Late Egyptian caute, the feminine of caus 'wildcat'. The word was introduced, together with the domestic animal itself, to the Roman Republic by the first century BC.

16. The domesticated cat and its closest wild ancestor are both organisms that possess 38 chromosomes and roughly 20,000 genes. About 250 heritable genetic disorders have been identified in cats, many similar to human inborn errors. The high level of similarity allows many of these diseases to be diagnosed using genetic tests that were originally developed for use in humans.

17. Cats as well as humans can experience some illnesses. Cats can suffer from a wide range of health problems, including infectious diseases, parasites, injuries, and chronic disease. Vaccinations are available for many of these diseases, and domestic cats are regularly given treatments to eliminate parasites such as worms and fleas.

18. In addition to obvious dangers, cats may be poisoned by many chemicals usually considered safe by their human guardians, because their livers are less effective at some forms of detoxification than those of many other animals, including humans and dogs. Cats may be particularly sensitive to environmental pollutants. When a cat has a sudden or prolonged serious illness without any obvious cause, it has possibly been exposed to a toxin.

19. Domestic cats use many vocalizations for communication, including purring, trilling, hissing, growling or snarling, grunting, and several different forms of meowing. By contrast, feral cats are generally silent. Their types of body language, including position of ears and tail, relaxation of whole body, and kneading of paws, are all indicators of mood. The tail and ears are particularly important social signal mechanisms.

20. Among domestic cats, males are more likely to fight than females. Among feral cats, the most common reason for cat fighting is competition between two males. In such cases, most fights are won by the heavier male. Another common reason for fighting in domestic cats is the difficulty of establishing territories within a small home. Female cats also fight over territory or to defend their kittens.

PART 4

Questions 21–29

Read the following text for question 21-29.

JASON

Jason sat up in bed and rubbed his eyes. It was unusually dark for 7 a.m., and his phone screen wouldn't turn on. He reached over to check the lamp on his bedside table, but it didn't work either. 'Power cut,' he thought, but something about the silence in the house felt wrong. Normally, he could hear the hum of the fridge or the sound of his neighbor's dog barking. But this morning, everything was still. Strangely still.

He pulled the curtain aside. The street outside looked exactly the same as always-except for one thing: it was completely empty. No early walkers. No delivery vans. Not even the usual cat that crossed his yard every morning. The houses around him looked dark, their curtains still drawn. He checked his watch-8:10. People should have been awake by now.

Jason pulled on a hoodie and jeans and went downstairs. As he passed the hallway mirror, he noticed something odd-his reflection looked slightly distorted, as if the glass was bending the image. He stared at it for a few seconds, then shook his head. 'Maybe I didn't sleep well,' he muttered.

The kitchen was no better. The fridge was silent, and when he turned the tap, no water came out. He picked up his phone again-still no signal. Not even emergency calls. That had never happened before. He tried turning on the radio, hoping to catch a news broadcast, but it only gave static. He felt a knot forming in his stomach.

He stepped outside. The air felt heavy, thick-like just before a thunderstorm. There were no sounds, not even birds. It was like the world had been placed on mute. He walked slowly toward the end of his street, passing familiar houses that now looked strangely unfamiliar.

Then he heard it. Footsteps behind him. Not rushed-calm, slow, steady. He turned sharply. No one. But just as he was about to convince himself it was nothing, he saw someone standing at

the far corner. A tall figure in a long, dark coat. Not moving. Just... watching.

Jason froze. Something about the figure made him uneasy. He couldn't see their face-it was covered by a hood-but he could feel the stare. Then the figure slowly lifted a hand and waved.

He took a few steps backward, unsure whether to shout or run. Suddenly, a hand grabbed his shoulder from behind. He jumped and spun around, fists clenched.

It was Leo.

'Man, relax! It's just me,' Leo said, wide-eyed.

Jason let out a breath. 'You scared me to death. Where have you been?'

'I woke up like you. No power, no people. I tried calling you, but I couldn't get through. What's happening?'

Jason pointed toward the corner. 'Did you see that guy?'

Leo nodded. 'Yeah. I saw him earlier. He was standing outside my window.'

They both looked back at the corner. The figure was gone.

Suddenly, a loud, deep hum filled the air. It was like the sound of a distant engine, but it seemed to come from everywhere at once. The ground vibrated slightly beneath their feet.

Jason and Leo looked at each other.

'What if... this isn't just a blackout?' Jason whispered.

Leo's face was pale. 'Then we're not just dealing with a power cut.'

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 What is Jason's first indication that something is seriously wrong?

A) He sees a man standing in his hallway
B) Everything is unusually silent and the power seems out
C) A neighbor warns him about an emergency
D) He hears a loud hum as soon as he wakes up

22 Which detail in the text suggests that something more than an ordinary blackout might be occurring?

A) The neighbors are using candles in their windows
B) The street lamps are still on
C) Jason's reflection in the mirror looks slightly distorted
D) Jason hears the noise of a thunderstorm approaching

23 What happens when Jason first notices the mysterious figure in the dark coat?

A) The figure calls out to Jason
B) The figure immediately disappears
C) The figure waves from a distance but doesn't approach
D) The figure approaches Jason and demands help

24 How do Jason and Leo react when they hear the loud, deep hum?

A) They ignore it because they assume it's a distant truck engine
B) They realize it might mean more than a simple power outage
C) They call the police to report the unusual sound
D) They rush inside and turn on the television for news

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 Jason notices that there is no usual morning barking from the neighbor's dog.

A) True
B) False
C) Not Given

26 The text says that water from the kitchen tap runs but comes out ice cold.

A) True
B) False
C) Not Given

27 Jason sees the neighborhood cat crossing his yard, as it normally does.

A) True
B) False
C) Not Given

28 Leo mentions that the same tall figure stood outside his window earlier.

A) True
B) False
C) Not Given

29 By the end of the text, the identity of the tall, hooded figure is revealed.

A) True
B) False
C) Not Given

PART 5 — Questions 30–35

Read the following text for questions 30-35.

VERTICAL FARMING

As urban populations grow and arable land becomes increasingly limited, the demand for alternative methods of food production is higher than ever. Among these innovative approaches, vertical farming has gained significant attention. This method involves cultivating crops in vertically stacked layers, often within controlled indoor environments such as repurposed warehouses, skyscrapers, or specially designed containers. Unlike traditional agriculture, which relies heavily on sunlight, rainfall, and vast expanses of land, vertical farming utilizes LED lighting, climate control systems, and hydroponic or aeroponic techniques to grow food more efficiently and in less space.

The appeal of vertical farming lies largely in its resource efficiency. In conventional agriculture, vast amounts of water are required, much of which is lost through evaporation or poor irrigation methods. Vertical farms, however, use closed-loop irrigation systems that recycle water and nutrients, resulting in up to 95% less water usage. Moreover, because the growing environment is completely enclosed, crops are protected from pests and diseases, drastically reducing or even eliminating the need for chemical pesticides. This not only lowers environmental damage but also contributes to healthier produce.

Another key advantage of vertical farming is its potential to shorten supply chains. In many urban regions, fresh produce must travel hundreds or even thousands of kilometers before reaching consumers. This long-distance transportation not only

increases food prices but also contributes significantly to greenhouse gas emissions. Vertical farms can be located directly in cities-sometimes within supermarkets or on rooftops-allowing produce to be harvested and sold locally, often on the same day. This reduces spoilage, enhances freshness, and offers a more sustainable alternative to long-distance food distribution.

Despite its promise, vertical farming faces several technological and economic challenges. The cost of establishing a vertical farm can be prohibitive, particularly in areas where real estate prices are high. Specialized equipment, advanced climate control technologies, and energy consumption-especially from artificial lighting-can lead to high operational expenses. Although some farms have begun using solar panels or other renewable energy sources to reduce their carbon footprint, the reliance on electricity remains a major obstacle to scalability.

Additionally, vertical farming is currently limited in terms of the variety of crops it can support. Fast-growing, low-height crops such as lettuce, kale, spinach, and herbs thrive in vertical systems. However, crops like corn, wheat, rice, and fruit-bearing trees require much more space and energy to cultivate, making them unsuitable for vertical environments in their current form. As a result, vertical farming is best viewed as a supplement to traditional agriculture, rather than a full replacement.

Proponents of vertical farming argue that as technological innovations continue, costs will decrease, and efficiency will increase. Developments in automation, robotics, artificial intelligence, and renewable energy integration could help overcome many of the current limitations. For example, AI-driven monitoring systems can precisely control temperature, humidity, and nutrient levels, ensuring optimal growth conditions while reducing waste.

Critics, however, caution against overestimating the benefits of vertical farming without considering its energy dependence and limited crop diversity. They argue that placing such systems in densely populated areas may also compete with other urban development needs, such as housing and infrastructure. Furthermore, the ecological cost of producing artificial materials for building and maintaining vertical farms should not be overlooked when calculating their long-term sustainability.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

VERTICAL FARMING

Vertical farming allows food to be produced in places like skyscrapers and containers using (30)**30**_____ systems to control environmental conditions. Due to closed-loop irrigation, vertical farms can reduce water usage by up to (31)**31**_____ percent. Growing crops directly in cities helps cut down transport-related (32)**32**_____ emissions. One major drawback of vertical farming is its high reliance on (33)**33**_____ for lighting and other systems.

For questions 34-35, choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

34 Why is vertical farming not considered a complete substitute for traditional agriculture?

A) It cannot grow any vegetables.
B) It produces higher amounts of waste.
C) It requires too many people to manage.
D) It is unsuitable for many common crops.

35 What is the writer's attitude toward the future of vertical farming?

A) Skeptical, due to its failure in many cities
B) Hopeful, because innovation may solve its current problems
C) Neutral, as vertical farming has already replaced old methods
D) Negative, as energy use outweighs all the benefits

MOCK TEST 37

READING

5 parts · 35 questions

60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

EMMA'S ADVENTURE ACROSS THE SAVANNA

Emma's dream was to travel across the African savanna. Early one morning, she arrived at a wide **Q1**_____ full of golden grass and tall trees. As Emma walked, she saw herds of zebras grazing quietly. The black and white stripes of the **Q2**_____ looked beautiful against the yellow grass. Nearby, a group of elephants was moving slowly across the savanna. Emma watched the **Q3**_____ use their trunks to pull leaves from the trees. Later, Emma decided to explore a small lake by renting a boat. She gently sailed the **Q4**_____ across the calm water, feeling the warm breeze. At night, Emma sat outside her camp, looking up at the sky filled with bright stars. The **Q5**_____ over the savanna were clearer and closer than she had ever seen before. When she felt hungry, Emma visited a cozy local restaurant. There, she tasted traditional African dishes, full of spices and fresh ingredients. At the end of her trip, Emma boarded a small train that crossed the savanna. As the **Q6**_____ moved through the grasslands, Emma watched the zebras, elephants, and endless beauty of the land disappear into the distance.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) They provide medical care and support services for people of all ages.

B) These airlines operate long-haul flights across continents, connecting major cities around the world.

C) This term is often used to refer to budget airlines, focusing on keeping prices low by offering minimal services and potentially charging for extras.

D) These airlines specialize in transporting cargo rather than passengers.

E) These airlines offer low-cost flights by focusing on efficiency and cutting back on extra services.

F) They offer spacious seats, gourmet meals, and premium amenities, making for a more enjoyable travel experience.

G) They offer a wide range of courses for adults, including language classes, cooking classes, and fitness classes.

H) These airlines try to combine the benefits of both budget and luxury airlines, offering affordable fares but also prioritizing passenger comfort and a high level of service.

I) These airlines operate shorter flights within a specific region, often connecting smaller cities and towns to larger hubs.

J) They usually fly to a wide range of domestic and international destinations and often focus on connecting their country to the world.

7

Q7

These airlines reduce ticket prices by focusing on operational efficiency and limiting extra services. They often use smaller airports and may charge extra fees for things like luggage or preferred seating.

8

Q8

Luxury carriers focus on providing maximum comfort and personalized attention. They offer wide seats, high-quality meals, and premium features to ensure a top-tier travel experience.

9

Q9

These airlines are typically state-owned or strongly backed by their government. They operate both domestic and international routes and aim to connect their country with global destinations.

10

Q10

These carriers handle short-distance flights within a particular area, often linking smaller towns to larger airports. They're mainly used for quick connections or short trips.

11

Q11

These airlines manage long-distance flights that link major global cities. They provide a broad range of services and typically maintain a large number of aircraft.

12

Q12

This term refers to airlines that aim to keep fares as low as possible by limiting services and often charging extra for optional add-ons.

13

Q13

These airlines blend features of low-cost and premium services, offering reasonable prices while still focusing on passenger comfort and quality service.

14

Q14

These carriers focus on shipping freight instead of transporting passengers. They operate large aircraft and emphasize timely, efficient delivery of goods.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) How New Audiences Shape Artistic Careers
B) Short-Form Creativity in the Digital Era
C) The Growing Importance of Intellectual Property
D) Modern Methods of Artistic Collaboration
E) Digital Platforms Driving Learning Accessibility
F) How Technology Affects Creative Exposure
G) Decline of Traditional Art Exhibitions
H) Building a Long-Term Career from Artistic Passion

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

ONLINE CREATIVITY

15. Short visual clips and rapid storytelling have become a dominant form of creative expression online. Artists now work within limited time frames, often just a few seconds, to convey emotions or ideas to wide audiences. This compressed format challenges traditional forms of art, requiring speed, simplicity, and instant connection to the viewer.

16. Many individuals who once shared their artistic hobbies casually now depend on their creative work for a living. Through clever self-promotion and audience engagement, they secure financial support, brand partnerships, and product sales. However, sustaining a long-term career demands constant innovation, strategic thinking, and personal branding beyond pure artistic talent.

17. Learning creative skills used to require enrolling in expensive schools or relocating to artistic hubs. Today, anyone with an internet connection can join expert-led classes, gaining the technical knowledge needed to improve their craft. This shift has allowed aspiring creators from all over the world to access opportunities that were once geographically or financially out of reach.

18. Working together across countries has become effortless for today's artists. Musicians, filmmakers, and designers collaborate in real-time without ever meeting face-to-face. This has not only expanded access to global perspectives but also introduced fresh ideas by blending diverse cultural backgrounds into new works.

19. The success of a creative project online often depends less on quality and more on invisible digital patterns. These complex systems prioritize some works over others based on hidden criteria like user preferences and activity history. As a result, gaining visibility today requires not just creativity, but also an understanding of how online exposure really works.

20. Sharing art across online platforms brings significant risks for creators. Ideas, designs, and original works can easily be copied or redistributed without permission. As a result, modern artists must find ways to safeguard their intellectual property, using technological tools and legal strategies to defend their ownership rights.

PART 4

Questions 21–29

Read the following text for question 21-29.

GENETICALLY MODIFIED FOODS

The development of genetically modified (GM) foods has been one of the most significant scientific advances in agriculture over the past few decades. By altering the genetic structure of plants and animals, scientists have created new varieties that are resistant to pests, diseases, and extreme weather conditions. Supporters argue that GM foods have the potential to enhance food security, reduce the environmental impact of farming, and improve nutritional content for populations around the world.

One of the primary motivations behind genetic modification is to increase crop yields. Traditional farming methods are often vulnerable to factors such as drought, insects, and plant diseases, which can significantly reduce harvests. By introducing specific genes into crops like corn, soybeans, and rice, scientists have developed strains that can survive harsh conditions and require fewer chemical treatments. This, in turn, can lead to lower costs for farmers and a reduction in the use of pesticides and herbicides, benefiting both human health and the environment.

Advocates also highlight the potential of GM foods to address nutritional deficiencies. For instance, "Golden Rice" has been engineered to contain higher levels of Vitamin A, aiming to combat deficiencies in regions where malnutrition remains a severe problem. Proponents believe that biofortified crops like these could play a crucial role in reducing global health inequalities and improving the quality of life in developing countries.

Despite these potential advantages, the use of GM technology in food production remains highly controversial. Critics argue that not enough is known about the long-term health effects of consuming genetically modified organisms (GMOs). Although numerous scientific studies have found no conclusive evidence that GM foods are harmful, public skepticism persists, fueled by concerns about the influence of large biotechnology corporations and the perceived unnaturalness of genetic modification.

Environmental concerns are another area of debate. Some researchers worry that GM crops could crossbreed with wild plants, leading to unintended ecological consequences such as the creation of "superweeds" that are resistant to conventional herbicides. Others raise ethical questions about the patenting of living organisms and the potential monopolization of the global food supply by a small number of powerful companies.

The issue of labeling GM foods has sparked further controversy. In many countries, consumers demand the right to know whether the products they purchase contain genetically modified ingredients. However, labeling regulations vary widely across different regions. While the European Union mandates clear labeling of GM products, other regions, including parts of

North America, have more flexible policies, leading to confusion and debate over consumer rights and transparency.

As scientific innovation continues to advance, the future of GM foods will depend on balancing technological possibilities with ethical considerations, environmental protection, and public trust. Greater investment in independent research, open dialogue between stakeholders, and comprehensive regulatory frameworks may help address concerns and ensure that the benefits of genetic modification are realized in a responsible and sustainable manner.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 Why were genetically modified crops mainly developed?

A) To help crops grow faster no matter the season
B) To help crops survive in tough weather and environment
C) To use more artificial fertilizers on farms
D) To remove the need for farmers to work in the fields

22 Which example shows that GM foods can make nutrition better?

A) Corn that can survive without much water
B) Golden Rice that has extra Vitamin A
C) Soybeans that resist herbicides
D) Wheat that can fight diseases

23 What are critics worried about with GM foods in the long run?

A) GM foods will completely replace natural farming
B) Eating GM foods might cause unknown health problems later
C) GM foods will need more chemical fertilizers
D) GM crops will be too costly for small farmers

24 What does the passage say about how GM food labels differ in different places?

A) North America bans GM foods but Europe allows them
B) Europe has strict labeling rules, but North America is more relaxed
C) Every country has exactly the same labeling rules
D) Only Asian countries ask for GM ingredients to be listed

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 GM crops are often designed to reduce farmers' reliance on chemical pesticides.

A) True
B) False
C) Not Given

26 There is strong, conclusive scientific evidence that GM foods are dangerous for human health.

A) True
B) False
C) Not Given

27 The passage states that public trust in GM technology has significantly increased over the past decade.

A) True
B) False
C) Not Given

28 Patent issues surrounding GM foods have raised ethical questions.

A) True
B) False
C) Not Given

29 Some critics fear that GM crops could breed with wild plants, causing unexpected ecological problems.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

VOLUNTEERING

For almost every person there will be a time in their life when they decide that they want to volunteer. There could be numerous reasons why you want to start doing volunteering work - from retirement to plain old fashioned good will. Different people may find different arguments in favour of doing this kind of work or service, if I can put it this way. But how do you get into the world of volunteering?

First of all, you need to make time to volunteer and before you can start approaching organizations and enquiring about volunteering opportunities, you need to first figure out how much of your time you can dedicate to volunteering. If you are working, then ask your employer if you can have consistent weekdays off, so you can then have regular time to volunteer each week. When you can promise a set amount of time to an organization, then they are much more likely to offer you a volunteering position. So think twice whether you can allocate enough time to this work before you start, otherwise it can be very disappointing for both sides. Next, it is time to think about why you want to volunteer. This may sound obvious, but have a good long think about the reasons why you are volunteering. Is it because you're passionate about helping others? Is it because you want to meet and spend time with new people? Or is it because you want to gain further experience and qualifications? Knowing your motives can help you decide which organizations and roles are best suited to your wants. Mind there are more opportunities for volunteering than you might know about or imagine.

The next step is to find an organization to volunteer with. You can volunteer at a local homeless shelter or at a charity shop. Maybe you like working with children, in which case the local youth center would be an ideal place to start with. Perhaps animals are more your thing, so you could ask a local animal shelter if they need a hand. As it was mentioned before, there are plenty of places you could volunteer to work with. Simply do your research, find the place that suits you and get in touch. Many organizations don't advertise that they're looking for volunteers, so it may be up to you to make the first move and contact them.

So, now you know how much time you can dedicate to volunteering, as well as why you want to volunteer and where you want to do it. The next step is to secure your position working within that organization by writing a CV. This may not be a paid position, but that doesn't mean you should be less ambitious than you normally would be when approaching a potential employer. In your CV you should outline any

experience you've had that is relevant to your voluntary position, explain why you want to volunteer and how you would benefit the company. State clearly how much free time you have to dedicate and how long you would be comfortable to work for the organization in terms of days, weeks, and months.

Laying out these clear ground rules will prevent you from being taken advantage of and overworked, and will also help your potential employer understand your needs. Apart from being rewarding in many ways (though not in the financial one), volunteering is often envisaged as an important part of social and personal maturing. No wonder there are so many volunteers among the young people in many countries of the world.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

VOLUNTEERING STEPS

Before seeking volunteering opportunities, you should determine how much (30)**30** _____ you can offer regularly. Understanding your personal (31)**31** _____ for volunteering can help you choose the right organization and role. Some organizations may not (32)**32** _____ their need for volunteers, so candidates must be proactive. Writing a clear (33)**33** _____ helps secure a volunteering position and protects your working conditions.

For questions 34-35, choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

34 According to the passage, what is a benefit of defining your availability and expectations before volunteering?

A) It makes it easier to request a salary later.
B) It helps avoid being exploited by the organization.
C) It guarantees a permanent job offer.
D) It reduces the need to write a formal application.

35 What is the writer's main aim in the passage?

A) To encourage readers to volunteer in animal shelters
B) To warn about the legal risks of volunteering
C) To explain practical steps for becoming a successful volunteer
D) To highlight the financial advantages of volunteering

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

HONEY

Honey is a sweet and natural food made by bees. **Q1** _____ collect nectar from flowers and bring it back to their hive. Inside the **Q2**_____, the bees change the nectar into thick, golden honey. This process is fascinating, and many scientists study how bees work together. A group of **Q3** _____ recently discovered that each bee in the colony has a special job. Some bees fly out to find flowers, while others protect the hive or store the **Q4**_____. To make a small jar of honey, thousands of bees must visit millions of **Q5** _____ The **Q6**_____ they collect is carried in their tiny bodies. Once they return, they pass it from one bee to another, slowly turning it into honey.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A cozy spot near a fireplace, perfect for enjoying a warm drink and a good book.

B) A unique dining experience with breathtaking city views, a cool breeze, and a touch of romance.

C) A breathtaking experience with panoramic views, fresh mountain air, and a feeling of accomplishment.

D) A bustling marketplace with vibrant stalls, delicious street food, and a lively atmosphere.

E) A tranquil spot by a lake, perfect for a relaxing afternoon with loved ones.

F) A peaceful escape surrounded by towering trees and lush greenery, offering a magical atmosphere.

G) A casual and convenient option, ideal for a quick bite and people-watching in the city.

H) A leisurely picnic with a scenic backdrop, featuring a flowing river and the sound of water.

I) A tranquil escape surrounded by blooming flowers and fragrant herbs, perfect for a romantic date.

J) A quintessential summer experience with the sound of waves crashing and the warmth of the sun.

7

Q7

This picnic spot next to a quiet lake is peaceful and beautiful. You can lay out your blanket on soft grass, listen to calm waves, and enjoy the clean air. It's the perfect place to relax and spend quality time with your loved ones.

8

Q8

This forest picnic area is calm and full of tall trees and greenery. Sunlight shines through the leaves, making it feel magical. You can enjoy nature's beauty, hear birds singing, and have a quiet meal in a peaceful place.

9

Q9

If you want a simple and quick picnic, this park bench is perfect. Grab some snacks or a takeaway sandwich and enjoy your food while watching people and the park. It's a nice spot in the middle of the city to rest and unwind.

10

Q10

A picnic on the beach gives you the full summer feeling. You can hear the waves, feel the warm sun, and smell the sea. Enjoy your food with a view of the ocean, build sandcastles, and relax under the sun.

11

Q11

Take your picnic to the top of a mountain for amazing views. After a good hike, enjoy the fresh mountain air and feel proud of reaching the top. It's a perfect place for a picnic with a view you won't forget.

12

Q12

Hidden in a quiet garden, this picnic spot is peaceful and surrounded by flowers and nice smells. It's great for a calm afternoon with friends or a sweet date in a relaxing garden setting.

13

Q13

Have a picnic by a flowing river, sitting on soft grass. You can relax while listening to the water, watch boats pass by, and enjoy the lovely view. It's perfect for a calm picnic in nature.

14

Q14

Try something different with a picnic on a rooftop. Enjoy amazing views of the city, feel the cool wind, and have a special meal. It's great for a romantic night or celebrating a special event under the stars.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) For adventurous skiers
B) Especially good in autumn
C) For the rich and lazy
D) Not just for gamblers
E) Like an island in heaven
F) Film-makers like it
G) Looking down from up there
H) Probably the best one of five

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

CANADA'S MUST-VISIT TOURIST DESTINATIONS

15. If you go to the Insular Mountain Range of Vancouver Island and face the open Pacific Ocean, be ready to experience the magnificent natural and cultural heritage of Canada's west coast. If you decide to go deeper into the island, you will find a lush coastal rainforest that gives way to bountiful and diverse intertidal and subtidal areas. And to top it all off, there are breathtaking beaches that make this an island paradise.

16. The resort town of Whistler is about a two-hour drive from Vancouver. Whistler offers visitors fine food and spas, but mostly it is popular among tourists for the opportunities it offers for adventure. Whistler and Blackcomb Mountains make Whistler one of the best destinations in the world for first-class skiing. The passage between the two mountains creates a unique terrain one mile above the village, providing a year-round skiable territory.

17. A prized national treasure, Banff National Park is one of five national parks in the Canadian Rocky Mountains. It attracts millions of visitors each year for camping, hiking, biking, skiing, fishing or just relaxing. A full range of accommodation, restaurants and shops can be found in the resort. Two of the most famous and historic Canadian hotels, the Fairmont Banff Springs and the Chateau Lake Louise, are located in these towns as well.

18. Niagara Falls is maybe the most famous in the world, attracting millions of tourists each year. However, it has a certain reputation for being partly a small-scale Las Vegas and a theme park, because in addition to Niagara Falls the tourists can visit a casino resort with fine hotels and restaurants. Although this area is improving very quickly and everyone can easily find what they like, the Niagara region as a whole is worth deeper exploration.

19. Tourists are naturally drawn to tall buildings where they can get a bird's eye view of a city. The CN tower, located in downtown Toronto, is the tallest free standing structure in the world. Unfortunately, elevated observation usually comes at an equally elevated price, and the CN Tower is no different. However, tourists love it and the glass elevator takes them to the glass-floored outdoor observation deck which is a real thrill for both kids and grownups.

20. The 300 km long Cabot Trail is famous for its panorama views of the Atlantic Ocean. The trail is especially popular in the fall when the views are the most spectacular. Even though the drive into this area usually takes a few hours, once there, tourists can spend a day or two stopping in at one or two of the towns along the trail, relaxing and enjoying the magnificent nature all around.

PART 4

Questions 21–29

Read the following text for question 21-29.

EMILY

Emily woke up before her alarm went off and knew instantly something wasn't quite right in the house. Bailey, her chocolate-coloured pet Labrador, should have been there at the bedroom door demanding food but there was no sound of him. She decided to get up and go and see where he was. It felt cold in the hall but she knew she had left the heating on last night. As she walked down the stairs she heard a noise in the kitchen; the strange feeling that something was wrong was getting stronger. What was going on? She got to the bottom of the stairs and opened the door to the living room, which led to the kitchen. Why was the door closed? She always left it open. Bailey was nowhere to be seen and his toys, which were usually all over the living room floor, were in a neat pile in the corner next to his basket. Had they been there when she had gone to bed last night? She couldn't remember.

She walked into the kitchen and turned the light on, it didn't work, nothing happened. She stood very still and listened, nothing. There wasn't a sound. That was really strange; she lived in the middle of a busy city, there were always people around. She woke up to the sound of traffic, car horns, police cars, her neighbours shouting in the house next door, how could there be silence at 8 o'clock on a Friday morning? She went back into the living room and turned the TV on, but again nothing happened. She went back into the kitchen and looked out of the window; it was a bright clear day. The back door was shut but when she tried the handle she realised it was unlocked. She walked out into the tiny back garden and opened the back gate; still nothing, not a sound and no sign of Bailey. She called him but he didn't come. She went back into the house and what she realised she should have done as soon as she got up and called her mother. But there was no answer. She called her boyfriend but his mobile was switched off and she got the answer phone message. She tried a couple of other numbers but with equal success. She sat down on the sofa and thought about what she could do. She couldn't decide if she should stay at home or go out and find someone. Just as she decided the best thing would be to stay at home and wait, there was a loud banging on the front door. She jumped up and ran to the door. "Who is it?" she shouted through the door.

"It's me," came the reply. But she had no idea who "me" was. She didn't want to open the door until she was sure she knew who it was, not with all the other strange things that were happening this morning, and she didn't want to shout through the thick front door, so she walked back into the living room and tried to look through the front window to see who was standing at the front door. It was a man but she couldn't make out who he was; he didn't look familiar. He was tall and was wearing a big coat with a hood over his head. Just as she was thinking of

running out the back door she saw that the man had Bailey with him, and Bailey seemed quite happy, which meant that the man had to be someone he knew and liked; he would have been barking at him otherwise. She still wasn't taking any chances though; she put the safety latch on the door and opened it just enough to see who was there. She was instantly relieved; it was her brother, who lived just a few streets away. She opened the door all the way and let him in. As he walked through the door he was almost knocked over by Bailey jumping up and looking more pleased than ever to see her. "So what's going on?" she asked her brother. He looked at her as if she was stupid. "Haven't you heard?"

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 What was the first thing Emily noticed that made her feel something was wrong that morning?

A) The living room door was wide open.
B) Bailey wasn't waiting outside her room asking for food.
C) She heard loud music coming from the kitchen.
D) The heating system wasn't working.

22 Which part of the story shows that Emily was shocked by how quiet everything was?

A) She lives in a quiet place in the countryside.
B) She expected it to be noisier since it was a busy Friday morning.
C) That time of day is always quiet with no people or cars.
D) She got up much earlier than she usually does.

23 How did Emily realize that the power might be out?

A) She tried to turn on the heat but it didn't work.
B) The kitchen lights wouldn't come on.
C) She switched on the TV but only saw static.
D) The home phone had no signal.

24 What made Emily finally open the front door?

A) She clearly heard her brother calling her.
B) She saw that Bailey was calmly standing beside the man.
C) The man outside said he would break the door.
D) She remembered someone was supposed to visit.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 Emily finds Bailey's toys lying scattered around the living room floor.

A) True
B) False
C) Not Given

26 Emily attempts several phone calls but cannot get through to anyone.

A) True
B) False
C) Not Given

27 The text states that Emily's mother left her a message on the voicemail.

A) True
B) False
C) Not Given

28 The stranger at the door turns out to be Emily's brother.

A) True
B) False
C) Not Given

29 Emily had locked the back door before going to bed.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

MIGRATORY LIFESTYLE

Out of a world population of 7.5 billion, around 30 million people currently lead a migratory lifestyle. Every continent has nomadic groups, leading a life very different from the sedentary communities they come into contact with. Almost all migratory communities are in steady decline for a wide range of reasons: climate change, political unrest, forced resettlement and armed conflict have all impacted on these traditional communities, diminishing their numbers year on year. However, the lure of the travelling lifestyle is as strong as ever. The 'gypsy lifestyle' continues to inspire people - especially the young - who crave the freedom of unstructured movement. Backpacking has become almost a rite of passage for the young. 'Gap years' between school and university often stretch to two years, or even more, as young people become addicted to the culture of travelling light and moving on.

Traditional nomads may be seen as 'wanderers', but their movement is not as unstructured as it may appear. Most nomadic communities are, or were, herdsmen, leading their animals across fixed routes based on pastures. Their societies were based on strong bonds of kinship. According to 14th-century social historian Ibn Khaldun, the Bedouin community owed their success in battle to assobiyo or 'group feeling', which enhanced their ability to protect the group from outsiders. This, along with excellent horsemanship and the rigours of a harsh lifestyle, based around constant alertness needed to protect livestock, made them formidable adversaries in war when compared to their more settled counterparts.

Far from the desert-dwelling Bedouin live a different kind of nomad: the Moken, or sea gypsies, of the Mergui Archipelago between Myanmar and the islands of Thailand's North Andaman coast. During the dry season, they live on traditional houseboats, and during the monsoon season they build temporary villages on sheltered stretches of beach. Theirs is a culture of sharing and giving, to the extent that their language contains no words for individual possessions. These indigenous people have a great understanding of and respect for their environment, making use of over 80 plant species for food and more than 100 for shelter, handicrafts and other purposes. However, the Moken's lifestyle has more recently been affected by government restrictions on their hunter-gathering activities, and legal disputes over ownership of their traditional lands. Somewhat inevitably, they have become a focus for tourism in the area, which they have embraced to some extent as they try to adapt to the modern world. Nomadic communities exist in Europe too. In the tundras and taigas of northern Scandinavia live a reindeer-herding community, the Sami. Originally

travelling freely across the areas which now belong to Norway, Sweden, Finland and Russia, this subculture has had its traditional lifestyle curtailed by the creation of national borders.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

NOMADIC LIFE

Migratory lifestyles (30)**30** _____ the youth who are eager to have unplanned travel. Nomadic herders tend to choose their way taking (31)**31** _____ into account. The Bedouin community had to be cautious all the time to (32)**32** _____ their farm animals. The Moken have no words for (33)**33** _____ property.

For questions 34-35, choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

34 **According to the passage, the Moken ...**

A) hardly share their own possessions.
B) live on the sea during the rainy season.
C) changed their lifestyle because of restrictions.
D) escaped to become accustomed to the modern world.

35 **What is the writer's purpose in the reading passage?**

A) to explain the future of backpacking culture
B) to compare the success of different nomadic groups
C) to criticize the lack of tolerance for travelling communities
D) to highlight the current state of traditional travelling cultures

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

EARTHQUAKES

Scientists say we need a new category for earthquakes. This is because tectonic activity is causing more powerful quakes. The **Q1**_____ want to extend the current 1 to 10 scale used to measure earthquakes. A category 10 is currently the strongest. This is when magnitudes reach 9.0 on the Richter scale. The scientists say a new category of 11 is needed for magnitudes of over 9.5. They say that in the past decade, there have been several **Q2**_____ that would be a category 11. Earthquakes can occur anywhere in the world, but are most common along **Q3**_____ plate boundaries.

A seismologist said the USA's Geological Survey would need to start researching intense quakes to create the **Q4**_____ 11. He wants more discussions, "about how to better prepare for risk in a tectonically active world". He said human activities, such as mining and reservoir-induced seismicity, are increasing the chances of stronger quakes. This is causing more energy to be released, which makes earthquakes more powerful. The **Q5** _____ thinks there will be more "mega-quakes" in the future. He said: "These **Q6**_____ keep getting stronger as tectonic activities increase."

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You require a highly portable laptop that is lightweight and ideal for frequent travel.

B) You are in search of a high-performance laptop capable of handling intensive gaming and multimedia applications.

C) You prioritize a laptop with exceptional battery longevity, suitable for prolonged use without access to power sources.

D) You seek a cost-effective laptop that offers essential features, making it an excellent choice for students on a budget.

E) You need a laptop with an expansive, high-definition display tailored for graphic design and detailed visual work.

F) You are looking for a robustly built laptop, engineered to withstand rigorous and demanding usage.

G) You require a laptop that seamlessly integrates within the Apple ecosystem, enhancing connectivity with other Apple devices.

H) You prefer a laptop equipped with sophisticated security features, designed for professional and business environments.

I) You are interested in a versatile 2-in-1 laptop that also functions as a tablet for enhanced flexibility.

J) You prioritize a laptop that is optimized for seamless video conferencing and virtual meetings, ensuring superior online communication.

7

Q7

The FlexiPad Pro is a versatile 2-in-1 device that can function both as a laptop and a tablet. With its detachable keyboard and touchscreen, it's perfect for those who need flexibility in their computing tasks.

8

Q8

Built to last, the RuggedBook 14 is designed to withstand harsh conditions. Whether you're working outdoors or in a demanding environment, this laptop's reinforced chassis and water-resistant keyboard offer superior durability.

9

Q9

The MacBook Air M2 is perfect for those who are deeply integrated into the Apple ecosystem. With seamless connectivity to other Apple devices, including iPhones and iPads, this laptop offers a smooth and intuitive experience.

10

Q10

Equipped with a 17-inch 4K display, the DesignPro 17 is the ideal choice for graphic designers and visual artists. Its high-resolution screen ensures that every detail is crystal clear, and the powerful GPU accelerates rendering tasks.

11

Q11

For gamers and multimedia enthusiasts, the PowerPlay X15 delivers high-end performance with its latest Intel i9 processor and NVIDIA RTX graphics card. It's built to handle demanding games and multimedia tasks with ease, offering a truly immersive experience.

12

Q12

The StudyMate Pro is tailored for students who need a reliable yet affordable laptop. With a balance of performance and price, it comes with the essential features for studying, such as a comfortable keyboard, a clear display, and a long battery life.

13

Q13

SecurePro Business is tailored for professionals who prioritize security in an affordable price. It features advanced encryption, fingerprint scanning, and secure boot options, making it the ideal choice for business users where data protection is critical.

14

Q14

Weighing just under 2 pounds, the TravelMate Ultra is designed for those who are constantly on the go. Its slim profile and lightweight build make it the perfect companion for frequent travelers. With up to 10 hours of battery life, it ensures you stay powered throughout the day.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

List of Headings:

A) Musical performance
B) Captivating landscape
C) Ideal holidays
D) Girl's portrait
E) Family-friendly film
F) Thrilling hobby
G) Vibrant festival
H) Engaging book

19. Tourists are naturally drawn to tall buildings where they can get a bird's eye view ... CN Tower ... glass-floored outdoor observation deck ...

20. The 300 km long Cabot Trail ... especially popular in the fall ...

PART 4

Questions 21–29

Read the following text for questions 21-29.

RAISINS

Few foods can claim a history as long as the humble raisin. Long before refrigeration or canning existed, people discovered that grapes left in the sun would shrink, darken and keep for months. Archaeological evidence suggests that ancient civilisations in the Middle East were sun-drying grapes as early as 2000 BC, and the practice soon spread across the Mediterranean. The Phoenicians and Armenians carried them along their trade routes, the Romans offered them as prizes in sporting contests, and medieval European physicians prescribed them for everything from coughs to poor digestion. Today raisins are produced and eaten on every inhabited continent, which makes them one of the oldest preserved foods still in daily use.

For the modern food industry, the raisin's greatest asset is its durability. Because most of the water has been removed, raisins resist the growth of bacteria and mould and, if stored correctly, remain edible for up to a year without refrigeration. This long shelf life lowers storage and transport costs, allowing manufacturers to ship them across the globe with little waste. Their versatility is equally valuable: raisins appear in breakfast cereals, cakes, bread, biscuits, sauces and even savoury rice dishes such as Uzbek plov. As a natural sweetener, they also allow producers to reduce the amount of refined sugar added to their products.

Production is dominated by a handful of countries, with Turkey, the United States, Iran and Uzbekistan among the largest suppliers. In California, which grows almost all American raisins, grapes are still largely dried in the open air on paper trays laid between the vines. While this traditional technique has hardly changed, the way the grapes are grown certainly has. The majority of large companies rely on conventional farming, using chemical fertilisers and pesticides to maximise yields. Organic methods, though increasingly popular with consumers, are practised by only a small minority of growers, largely because they require more labour and produce smaller harvests.

This intensive approach comes at a cost. Growing grapes year after year on the same land gradually strips the soil of essential nutrients, leaving it less fertile and ever more dependent on artificial inputs. Moreover, vineyards in dry regions consume enormous quantities of water, and chemicals washed from the fields can enter rivers and streams, harming fish, insects and the birds that feed on them. Environmental groups argue that unless farming practices change, some major growing areas may eventually become unable to support the crop at all.

The human side of the industry raises questions too. The harvest takes place in late summer, when temperatures in California's San Joaquin Valley regularly exceed 40°C. Pickers, many of them seasonal migrants, cut the bunches by hand and are often paid according to the number of trays they fill rather than by the hour. As a result, their earnings frequently fall below those of farm workers in many other American states, despite the exhausting nature of the job.

Nutritionally, raisins have much to recommend them. They are rich in fibre, potassium, iron and antioxidants, and parents often pack them in school lunches as a healthier alternative to sweets.

Yet nutritionists urge caution. The drying process concentrates the fruit's natural sugar, so a small handful contains roughly as many calories as a large bowl of fresh grapes. Because raisins are so easy to eat in large quantities, regular overconsumption can contribute to weight gain, type 2 diabetes and tooth decay. In addition, some lighter varieties, known as golden raisins, are treated with sulphur dioxide to preserve their colour, and consumers are advised to read labels carefully.

Looking ahead, scientists are searching for ways to make raisin production more sustainable. Researchers at agricultural universities are developing grape varieties that dry naturally on the vine and require less water, while some farms have begun experimenting with drip irrigation and solar-powered dryers. Others are testing cover crops planted between the rows to restore nutrients to the soil. If these efforts succeed, this ancient food may continue to be enjoyed for centuries to come, with far less damage to the environment.

Choose the correct answer A, B, C, or D.

21 What is the first paragraph mainly about?

A) The scientific process of drying grapes.
B) The long and widespread use of raisins throughout history.
C) The trade routes of the Phoenicians and Armenians.
D) The medical use of raisins in medieval Europe.

22 Why are raisins important for the food industry?

A) They are cheaper than refined sugar.
B) They are grown in a large number of countries.
C) They can be kept for a long time and used in a variety of foods.
D) They need neither refrigeration nor packaging.

23 What is the environmental challenge of raisin production?

A) Vineyards produce large amounts of paper waste.
B) Repeated cultivation exhausts the soil and harms surrounding ecosystems.
C) High summer temperatures destroy much of the harvest.
D) Drying grapes in the open air pollutes the air.

24 Why are nutritionists concerned about raisins?

A) They contain too little fibre and iron.
B) They lose most of their antioxidants during drying.
C) Eating too many of them may cause health problems because of their sugar content.
D) They are mainly eaten by children instead of proper meals.

Decide if the following statements agree with the information given in the text.

25 Ancient civilisations in the Middle East used sun-drying to preserve grapes.

A) True
B) False
C) Not Given

26 Many large companies use organic farming methods in raisin production.

A) True
B) False
C) Not Given

27 Vineyard workers in California receive higher wages than farm workers in other states.

A) True
B) False
C) Not Given

28 Some health experts warn that raisins contain artificial substances which are dangerous for children.

A) True
B) False
C) Not Given

29 Scientists are trying to find ways to reduce the environmental impact of raisin production in the future.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

ELECTRIC VEHICLES

Over the past decade, electric vehicles (EVs) have shifted from being a niche curiosity to a significant presence on the world's roads. According to the International Energy Agency, electric cars made up around fourteen percent of all new cars sold globally in 2022, a remarkable rise from just four percent only two years earlier. Industry analysts predict that this figure will continue to climb as manufacturers expand their electric line-ups and consumers become increasingly aware of environmental issues.

Surprisingly, the electric car is not a modern invention. As early as the late nineteenth century, electric models competed directly with steam and petrolpowered vehicles. In fact, around 1900, they were particularly popular among wealthy urban residents, who appreciated their quiet operation and the convenience of not having to start the engine with a heavy hand crank. However, the mass production of cheap petrol cars, combined with the discovery of vast oil reserves, gradually pushed electric vehicles off the market for most of the twentieth century.

The recent revival of electric transport can be attributed to several factors. Advances in lithium-ion battery technology have significantly reduced costs while increasing the distance a vehicle can travel on a single charge. At the same time, governments across the globe have introduced subsidies, tax exemptions and stricter emission standards, all of which have stimulated consumer demand. Many countries have even announced plans to ban the sale of new petrol and diesel cars within the next two decades.

Despite this progress, many motorists remain hesitant to make the switch. One of the most frequently cited concerns is so-called range anxiety, the fear that a vehicle's battery will run out before the driver reaches a charging point. Although modern EVs can typically cover between 300 and 500 kilometres on a full battery, this worry continues to influence purchasing decisions, particularly among people who live in rural areas or regularly undertake long journeys.

Range is not the only obstacle. In many regions, the public charging network remains underdeveloped, leaving drivers with

few options outside major cities. Recharging a battery also takes considerably longer than filling a tank with fuel, sometimes requiring several hours. Furthermore, the initial purchase price of an electric car is still higher than that of a comparable conventional model, and batteries gradually lose their capacity over time, which can reduce the vehicle's resale value.

The environmental benefits of electric cars are also the subject of ongoing debate. While EVs produce no exhaust emissions, critics point out that their overall impact depends largely on how the electricity used to charge them is generated. In countries that rely heavily on coal-fired power stations, the reduction in carbon emissions may be relatively modest. In addition, the extraction of raw materials such as lithium and cobalt, which are essential for battery production, raises serious environmental and ethical concerns.

Nevertheless, most experts agree that electric vehicles will play a central role in the future of transport. As renewable energy sources expand, charging infrastructure improves and battery technology continues to advance, many of today's limitations are likely to be overcome. The transition may not be immediate, but the direction of change appears increasingly clear.

Fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

ELECTRIC VEHICLES - SUMMARY

In 2022, roughly **30** _____ out of every hundred new cars bought worldwide were powered by electricity. Wealthy city dwellers in the early 1900s favoured electric models because they were silent and offered the **31** _____ of avoiding a physically demanding starting process. Financial incentives and tighter regulations introduced by authorities have led to greater buyer **32** _____ for electric cars. A considerable number of potential owners still feel **33** _____ about being left on the road with an empty battery.

Choose the correct answer A, B, C, or D.

34 **Which of the following is NOT mentioned as a drawback of owning an electric vehicle?**

A) Limited availability of recharging stations
B) Low upfront cost
C) Time-consuming refuelling process
D) Deterioration of battery capacity

35 **According to the text, what mainly determines how environmentally beneficial an electric car is?**

A) the way the power used for charging is produced
B) the amount of raw materials in its battery
C) the absence of exhaust gases
D) the number of kilometres it covers

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

CYCLING AND KNEES

Cycling keeps us fit and healthy. It is good for our heart and our mental health. It also keeps our weight down. A surprising benefit of getting on a bike is that it is good for our knees. A new study says cyclists have less knee pain when they get older. The **Q1**_____ is from Baylor College of Medicine in the USA. Researchers surveyed 2,600 people, with an average age of 64. The **Q2**_____ were asked about their levels of physical activity. They also had X-rays of their knees taken. **Q3** _____ looked at the X-rays for signs of arthritis in the knee joints.

Lead researcher Dr Grace Lo was surprised by the results of the research. She said **Q4**_____ were 21 per cent less likely to have signs of a joint problem called osteoarthritis. This is often called "wear-and-tear" arthritis. It happens when we use our joints a lot. The joint wears down and becomes painful. **Q5** _____ is a very common disease. It usually starts when people are in their fifties. Dr Lo said cycling, "is a great preventative strategy for many things, including arthritis". A lot of **Q6**_____ shows that cyclists are around 20 per cent less likely to die prematurely.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A pair is seeking a secluded retreat where they can indulge in exquisite dining experiences.

B) Your acquaintance, a qualified sailing instructor, desires employment in a location with convenient access to maritime activities.

C) You require a venue equipped with cutting-edge facilities to host large-scale corporate events.

D) Your friend, an experienced pastry chef, is searching for a position in a hotel that offers on-site living accommodations.

E) You are pursuing a managerial role in a hotel that provides opportunities for professional advancement.

F) Your colleague seeks a tranquil setting suitable for conducting a leadership workshop.

G) You and your partner are seeking a cozy seaside hotel where you can enjoy water activities together and relax in a tranquil environment.

H) You wish to spend your vacation in a destination that offers a mix of outdoor activities and cultural experiences.

I) A friend is interested in overseeing the operations of a restaurant that offers a competitive compensation package.

J) You are in search of a beachfront location where you and a small group of friends can unwind.

7

Q7

Located along a serene coastline, this boutique hotel offers 15 elegantly designed rooms, each with a private balcony overlooking the sea. The hotel features a quaint restaurant serving fresh, local seafood and offers various water activities such as kayaking and paddleboarding. Ideal for couples and small groups looking to unwind by the beach.

8

Q8

This charming inn is positioned just a short distance from a lively marina, providing guests with the opportunity to partake in various water sports, including sailing lessons available at the nearby harbor.

9

Q9

Set amidst the heart of natural surroundings, this lodge is an ideal escape for enthusiasts of nature and outdoor adventures. Guests can explore hiking trails, enjoy bird watching, and delve into the cultural heritage of a nearby site.

10

Q10

This contemporary venue is fully equipped to meet the demands of large corporate gatherings, offering expansive conference rooms, dining facilities, and comprehensive technical support. Its peaceful location with scenic surroundings makes it an excellent choice for workshops and seminars.

11

Q11

Located at the heart of the city, The Grand Hotel offers luxurious accommodations paired with all the necessary amenities for hosting significant corporate events. The hotel features multiple banquet halls and conference spaces capable of accommodating events of various scales.

12

Q12

A family-operated establishment located in a picturesque village, this inn is currently seeking a committed chef to join its small yet skilled team. The role includes accommodation and offers potential for career growth in a nurturing environment.

13

Q13

Tucked away in a remote location, this 16th-century manor exudes a romantic ambiance, featuring candlelit dinners with gourmet local cuisine and personalized service tailored for couples.

14

Q14

This seaside hotel is in search of an experienced assistant manager to assist in overseeing daily operations. The ideal candidate will have a background in hospitality management and a drive to advance their career within the industry.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

List of Headings:

A taste of everything
B) Shop till you drop
C) City's tourist attractions
D) Ancient traditions live on
E) Activities for the adventurous and hardy
F) On the crossroads of religions
G) For the body, mind and soul
H) From the high peaks to the deep seas

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

INDONESIA

I. Today Jakarta has much to offer, ranging from museums, art and antique markets, first class shopping to accommodations and a wide variety of cultural activities. Jakarta's most famous landmark, the National Monument or Monas, is a 137m obelisk topped with a flame sculpture coated with 35 kg of gold. Other attractions include the National Museum with ethnographic artifacts and the Maritime Museum exhibiting Indonesia's seafaring traditions.

II. Sumatra is a paradise for nature lovers, with national parks, mountains and coastlines suited to adventure. Along western shores there are strong waves that attract surfers, while coral reefs provide excellent diving. Night divers can explore the waters around islands in the Riau Archipelago and encounter unusual marine creatures in the dark.

III. Many establishments offer complete pampering services with floral baths, body scrubs, aromatic oils, massages and meditation. Ritual treatments use herbs and spices to promote both physical and mental wellness. Indonesians are known for treating the body and mind as a connected whole.

IV. Jakarta has a distinctly cosmopolitan flavor. You can enjoy food from local eateries to stylish cafes and international restaurants. The taste of Indonesia's many cultures can be found throughout the city, from spicy dishes of West Sumatra to sweet flavors associated with Central Java.

V. Despite modernization and strong foreign influence, many native communities maintain their rituals, architecture, religion, dance and music. On islands such as Siberut, tribal groups still preserve long-standing communal traditions and ceremonial practices that reflect pre-modern heritage.

VI. Whether you are a serious spender or a casual shopper, Jakarta offers choices for every budget. You can find local handicrafts, modern fashion labels, shopping centers, quality goods at competitive prices and lively sidewalk bargains ranging from flowers to tropical fruits.

PART 4

Questions 21–29

Read the following text for question 21-29.

THE CACAO

Most people today think of chocolate as something sweet to eat or drink that can be easily found in stores around the world. It might surprise you that chocolate was once highly treasured. Historians believe the Maya people of Central America first learned to farm cacao plants around two thousand years ago. They cooked cacao seeds, crushed them into a soft paste and mixed it with water and spices to make an unsweetened drink. The Maya poured the drink between containers so it developed a layer of bubbles.

Cacao and chocolate were an important part of Maya culture. Ruling families drank chocolate at special ceremonies, and even poorer members of society could enjoy it only from time to time. Historians also believe cacao seeds were connected with marriage ceremonies. In Aztec culture around present-day Mexico, cacao plants could not grow easily in the area where many Aztecs lived, so they traded for cacao. Aztec rulers used cacao seeds as a form of money to pay taxes. Priests offered cacao to the gods and served chocolate in sacred events.

The explorer Christopher Columbus brought cacao seeds to Spain after his trip to Central America in 1502, but Spanish explorer Hernando Cortes later understood cacao's economic potential. After the Spanish defeated the Aztec empire, they seized cacao supplies and sent them home. Spain later expanded cacao growing in American colonies to meet rising demand.

At first, wealthy people in Spain enjoyed a sweetened chocolate drink. Later, chocolate spread through Europe. Because of price, only rich people could afford it until the eighteenth century. During the Industrial Revolution, new technologies made chocolate less costly to produce. Farmers then grew cacao trees in many countries in Africa, Central America and South America.

Cacao trees need heat, water, shade, suitable soil and protection, so farming can be difficult. Trees begin producing pods after several years, and seeds from these pods are

harvested to make chocolate. Farm cacao trees can be more vulnerable to disease and insects than wild trees, and uncertain market conditions can reduce farmers' income. In modern production, cacao seeds are sorted, cleaned and cooked. Workers break and crush the seeds into chocolate liquor, then separate solids and cocoa butter. Manufacturers blend chocolate liquor with sugar, milk and cocoa fat before further processing and molding.

For questions 21-24, choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

21 What role did chocolate originally play in Mesoamerican societies?

A) It was primarily used as a form of currency.
B) It was a ceremonial drink and a symbol of wealth.
C) It was consumed daily by all members of society.
D) It was used as a medicine for healing purposes.

22 How did the spread of cacao cultivation and chocolate consumption expand beyond Mesoamerica?

A) Through the establishment of trade routes with Asia.
B) Via European explorers who brought it back to Europe.
C) Through the migration of Mesoamerican people to Europe.
D) By the adoption of chocolate by African traders.

23 What contributed to the transformation of chocolate from a luxury item to a more widely available product?

A) The discovery of new cacao varieties
B) The technological advancements during the Industrial Revolution
C) The decline of cacao production in Mesoamerica
D) The introduction of chocolate as a medicinal product

24 Which factor made cacao farming particularly challenging for farmers?

A) The high demand for cacao seeds
B) The environmental and economic risks involved
C) The lack of suitable soil in tropical regions
D) The limited market for cacao products

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 The Maya people were the first to create a sweetened chocolate drink that was enjoyed daily by all social classes.

A) True
B) False
C) Not Given

26 Cacao seeds were a central aspect of the economic system for both the Maya and the Aztec civilizations.

A) True
B) False
C) Not Given

27 Christopher Columbus recognized the immediate potential of cacao as a valuable export commodity after his first encounter with it in the Americas.

A) True
B) False
C) Not Given

28 The spread of chocolate across Europe in the 16th and 17th centuries was initially limited to royalty and the wealthy elite due to its cost.

A) True
B) False
C) Not Given

29 The process of cacao farming and chocolate production has remained largely unchanged since the time of the Aztecs and Maya, relying heavily on traditional methods.

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

SAFETY MEASURES FOR ROOF WORK

Roof work is inherently dangerous, involving activities at significant heights and often under challenging conditions. To reduce the risks associated with this type of work, it is essential to implement comprehensive safety measures. These measures are designed to protect workers from falls, equipment failures and adverse weather, ensuring a safer working environment.

One of the foremost concerns in roof work is the risk of falls. Personal protective equipment is crucial in minimizing this risk. Workers must wear harnesses that are correctly fitted and regularly inspected for wear and tear. Helmets are also essential, providing protection against falling objects and reducing the risk of head injuries. Non-slip footwear helps prevent slips on roofing materials, especially when surfaces are wet or icy.

Structural safety measures are equally important. Safety nets and guardrails are two key methods of fall prevention. Safety nets installed below the working area can catch workers if they fall, preventing serious injury. Guardrails provide a physical barrier around the perimeter of the roof and prevent workers from stepping over the edge. Both systems must meet regulatory standards and undergo regular checks.

Access to the roof is another critical aspect of safety. Ladders and scaffolding are commonly used to reach high areas. These tools must be placed on stable ground and inspected for defects before use. Scaffolding should be properly braced and capable of supporting workers and materials. Ladders should extend at least three feet above the roof edge to provide a secure handhold while workers transition between ladder and roof.

Weather conditions play a major role in roof safety. High winds, heavy rain and icy conditions can create hazardous working environments. It is crucial to monitor forecasts and avoid roof work during dangerous weather. Scheduling tasks in favorable weather can significantly reduce accident risk.

Training and supervision are vital for maintaining safety standards. Workers need instruction on safe work practices, correct equipment use and emergency procedures. Regular briefings and drills keep safety protocols fresh. Supervisors should ensure adherence to guidelines and respond quickly to any hazards. Effective communication, including radios or other devices, helps teams stay coordinated and prevents misunderstandings that can lead to accidents.

Proper planning and risk assessment are critical before work begins. A thorough assessment should identify hazards, define mitigation strategies, confirm equipment condition, specify safe access points and develop contingency plans for emergencies.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

ROOF-WORK SAFETY

The predominant danger associated with roof work is the risk of (30)**30** _____. To safeguard workers, (31)**31** _____ nets are positioned beneath the working area to arrest falls. Ladders must extend at least three feet beyond the roof edge to provide a secure (32)**32** _____ during transitions. It is vital to avoid roof work during unfavorable (33)**33** _____ conditions to minimize the likelihood of accidents.

For questions 34-35, choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

34 Which of the following best describes the importance of safety measures in roof work?

A) They primarily aim to reduce the cost of insurance for construction companies.

B) They are designed to enhance worker productivity by minimizing distractions.

C) They ensure the protection of workers from various hazards, including falls and adverse weather conditions.

D) They are mainly focused on improving the aesthetic quality of construction sites.

35 What is the broader significance of structural safety measures, such as guardrails and safety nets, in roof work?

A) They are a regulatory requirement that increases the overall cost of projects.

B) They act as deterrents to unauthorized personnel accessing the work area.

C) They play a critical role in preventing accidents by providing physical barriers and fall protection.

D) They primarily serve as temporary storage solutions for materials used in construction.

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE SEA URCHIN

A series of research projects in recent years have looked at the small, spiny, marine invertebrate known as the sea urchin. The sequence of their genetic code has been successfully analysed, revealing a remarkably close resemblance to that of humans. This provides a firmer foundation for the claim that **Q1** _____ and sea urchins share a common ancestor, which must have lived over 540 million years ago.

The red sea **Q2**_____, found off the west coast of North America and elsewhere, was considered a pest in the 1960s and attempts were made to eradicate it wherever locals were farming kelp. In the 1970s, though, American sea fisheries discovered a lucrative market in Japan, where certain internal organs of these creatures were **Q3**_____ a delicacy, and by the 1990s they had become one of the most valuable marine resources.

There are implications for these **Q4**_____ in the latest findings about the way sea urchins mature. Not only are the invertebrates capable of reaching an age of 200 years or more, but they also show no signs of age-related degeneration. In fact, the more advanced the age of an urchin is, the more enhanced its powers of reproduction seem to be. On the other hand, population growth is limited due to the ease with which juvenile urchins fall prey to a range of environmental threats.

Studies have also looked at growth rates, using measures of carbon-14, which has increased in all living organisms following the atmospheric testing of atomic weapons in the 1950s. These **Q5**_____ confirmed earlier findings, obtained using injections of tetracyclin, that the process of enlargment never reaches a ceiling. Growth **Q6**_____ may diminish to only an extra millimeter in circumference per year but they do not cease.

PART 2

Questions 7–14

The people below all want to visit to an interesting city. Decide which city would be the most suitable for each person.

7
David enjoys walking but he has injured his knee and cannot climb up hills. He would like to spend a couple of hours on a quiet walk with well-marked paths.

8
Luigi likes to get as much exercise as possible and particularly likes climbing steep hills to get a good view. He wants to do a walk that is difficult and offers a range of scenery.

9
Yannis has two sons of 8 and 10. He would like to take them to see some animals in the countryside. He wants to be able to buy some refreshments.

10
Amada has had an operation and needs plenty of fresh air to help her recover. She wants to find a short, quiet walk with a beautiful place to visit on the route.

11
Claudia's grandparents are staying with her. They are very fit and enjoy walking. They would like to visit some of the local villages and need a clearly-marked route so they don't lose their way.

12
Mike, Kathy and their three children don't have much money, but they want a special day out this Saturday. They must be back home by 9 p.m.

13
Kirsten is a Dutch student who is studying in Scotland. She doesn't drive, but wants a day trip to see some beautiful scenery and spend a little time by the sea.

14
Clare and Robert want to enjoy some good food, but would also like to give their two young children a day to remember. They don't mind if they spend a lot of money.

A) MARIE LIFE, FRANCE. The chance to experience the oceans of the world. Children will love the observatory, with water all around them and enormous fish swimming above their heads! Afterwards you eat at a world-famous local restaurant before boarding the ferry at 9 p.m. Not cheap, but a great day out!

B) SEA PATH. This walk starts at the village of Nye Flats and the excellent signposts lead you through local streets, fields and pretty neighbouring villages. Although it will take you half a day, there are no hills at all. You can breathe the sea air and enjoy watching traditional life in busy villages.

C) CUTTERS WAY. This walk can take anything from 30 minutes to two hours. It's not a good walk for hill-lovers as the ground is completely flat, but it has good signposts and simple facilities for the hungry or thirsty walker. A few places or things to see would improve this walk, which can be a little dull.

D) PADDOCK WAY. This is really a short track across a working farm. There are plenty of chickens and sheep to see, and the farmer has turned some of the buildings into an educational centre with a café. Not a walk for those who like peace and quiet, but good fun.

E) HURDLES. This is a route for the experienced walker. It crosses two rivers and includes hills of up to 500 metres, from which you can see the sea. There are several rocky paths that are unsuitable for children or older people and there are no shops so take plenty of water.

F) NEVERLAND. This is a walk to take if you have a whole day to spare and want to escape from other people. It follows a narrow track which is clearly marked and has different routes for different types of walker. There are hills to climb but views are limited because of thick forest.

G) FRENCH HYPERMARKET DAY TRIP. Whether you want to buy or just look, you'll love this tour. The enormous Darney shopping centre is a shopper's dream! You will find a great number of local goods on sale, and clothes and kitchen goods are excellent value. Free children's entertainment all day. Leaves 10:00, back at 19:00.

H) GOLD-DIGGERS END. You won't find any gold on this peaceful walk, but you will find plenty of other things to see including a lovely garden which is open to the public. It's a half-hour walk with a couple of small cafés on the way.

I) A TASTE OF THE GOOD LIFE IN FRANCE. After a relaxing voyage, you visit a beautiful area which is famous for its good things to eat. There you can enjoy some sightseeing and choose from a number of wonderful restaurants. Sail back on the night crossing. Sorry, adults only!

J) SEA AND MOUNTAINS IN NORTHERN IRELAND. Explore the Northern Ireland countryside, including the amazing Mountains of Mourne and the small seaside holiday town of Newcastle. The ferry leaves the port in Scotland at 7:30 and arrives back at 22:20. Transport in Northern Ireland is by air-conditioned coach.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

i) The struggle for power
ii) Efforts to survive in difficult circumstances
iii) A centre of commerce
iv) A major shift in belief
v) Overcome by the power of nature
vi) Publicly honoured but persistently wrecked
vii) An uncertain position
viii) Clues of a glorious past

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

THE RISE AND FALL OF EPHESUS

1. People have lived at the site and the surroundings for thousands of years. Archaeologists have found evidence dating from Neolithic times. There were also settlements during the Bronze Age, although no architectural structures remain from this period. The precise location of the city during these times cannot be firmly established, as the river has moved over the centuries. The once busy harbour has also vanished.

2. However, about 2000 years ago, the diverse leaders of the city started elaborate city planning projects. We can tell what a sophisticated society this was, from some of the ruins. The most impressive are the elaborately decorated remains of the front wall of a huge library. This used to contain thousands of papers. There is also a theatre with a capacity to seat 25,000, possibly the biggest theatre of its time. Wide roads paved with marble also remain, and a complex system of aqueducts. These carried water to public baths and water mills, which cut the marble for building. Women's rights were honoured, possibly because of the importance of goddess-worship, and there were even female artists.

3. The city was well-known as the site of the enormous Temple of Artemis. This was considered to be the finest of the Seven Wonders of the Ancient World. People came from far away to worship the goddess Artemis, establishing Ephesus as a major destination for travellers. The temple had to be completely re-built three times before it was finally destroyed in 401 AD. It was first destroyed by a flood, later deliberately burnt down by a lunatic, and was eventually destroyed in a Gothic raid. All that remains is a broken column, standing crookedly in the middle of a marsh.

4. At its peak, about 300,000 people lived in the city, making it second only in size to Rome in the ancient world. Not only was it densely populated, it was also a key trading city, situated in a strategic location on the Aegean Sea. Its position in a fertile valley gave its people another source of income from agriculture, and they could easily export their products. During the reign of Emperor Augustus, it was the capital of the region, and a new era of prosperity began.

5. As with many beautiful cities of strategic importance, Ephesus was constantly fought over. It changed hands and allegiance many times, and was part of the Greek, Roman, Persian,

Byzantine and Ottoman Empires. During Roman rule, taxes rose and the city's treasures were stolen. At one point, Ephesus was self-governing, but this was only for a short time. When the Romans took over again, the citizens were forced to pay taxes retrospectively.

6. In 50 AD, Ephesus became an important centre of Christianity, and is mentioned in the Bible. Key leaders of the early church lived in the city. These included the apostle Paul, who wrote much of the Bible, and it is thought that Mary, the mother of Jesus, died in Ephesus. The position of Ephesus at the heart of Christianity is ironic, as for many years, the city had been best known for the Temple to Artemis. When many citizens converted to Christianity, the local silver-workers were furious, scared of losing their livelihood making silver statues of the goddess.

PART 4 Questions 21–29

Read the following text for questions 21-29.

AFGHAN AIRLINES

Ariana is different from most other airlines for many reasons, all of them bad. Its history is terrible. During Afghanistan's quarter of a century of war, Ariana planes were shut down, shot down or hijacked. No-one chooses to fly Ariana today. It has a disastrous safety record and this means it cannot fly to most European and American airports. It is nicknamed "Scaryana". UN officials and foreign diplomats are not allowed to take Ariana flights. And most of the 1,700 staff are, according to Atash, either extremely incompetent or corrupt.

Is Ariana the world's worst airline? Perhaps not. There are many bad airlines in the developing world. "Ariana is no worse than many others," says David Learmount at Flight International magazine. "If a country has no safety culture, neither does its airline." But Ariana has one advantage over other disaster airlines – it has a rescue plan. Atash, a straight-talking Afghan American emigre, returned three years ago from the USA where he ran a business. He was given the job of manager at Ariana in June.

It is not a glamorous job. Atash is paid just $100 a month and uses his own mobile phone. But he has a can-do attitude and plans to get rid of hundreds of incompetent staff. It is a difficult task but he is not alone. In comes Hanns Marienfeld, the leader of a six-strong team from Lufthansa hired to help with the rescue plan. He describes the state of Ariana one year ago: "It was not up to international standards," he says. "It had no flight schedule. Customers had to pay a bribe to get a ticket, a second bribe to get a boarding pass and sometimes a third to get their seat in business class. We flew here or there, whenever the pilots felt like it." Initial safety standards were not good. In 2003 and 2004, Ariana's fleet of six planes suffered six major engine failures. "In Germany, our pilots only see that sort of thing in a flight simulator. In Ariana we do it in real life," says Marienfeld.

The early years were very different. Ariana was founded in 1955 and quickly gained a reputation as a small but proud regional carrier. It flew hippies and adventurers from London, Paris and Frankfurt and brought honeymooning couples from neighbouring Pakistan. But in 1973, King Zahir Shah was overthrown and five years later a civil war began. The visitors vanished and Ariana, like the rest of Afghanistan, suffered very badly.

During the 10-year Soviet occupation, when the roads were too dangerous, Ariana became the safest way to travel. But the sense of security was relative. The mujahideen fighters who were fighting the Soviet forces were armed with American anti-aircraft missiles. So Ariana pilots had to learn how to avoid the missiles while taking off and landing. Some staff could take no more. On a flight to Kandahar in 1989, a fight broke out between the pilot and the co-pilot. The pilot wanted to fly the plane to Iran. The co-pilot did not want to go. As they fought for the controls, the plane fell out of the sky, crashing into the desert near the Iranian border. All six people on board died.

After the Soviet departure the airline went from bad to worse. When the Taliban took control of Kabul a year later, they brought their 7th century ideas to Ariana's 20th-century business. They sent the stewardesses home, banned inflight music and gave the job of director to a 26-year-old religious fanatic.

Choose the correct answer A, B, C, or D.

21 According to the text, why is Ariana nicknamed "Scaryana"?

A) It has very strict security measures
B) It does not allow any foreign passengers
C) It has a terrible safety record
D) It never follows any flight schedules

22 What does David Learmount suggest is a main reason for Ariana's poor airline standards?

A) The airline operates in a country with no safety culture
B) Its planes are too old to maintain
C) Ariana's leaders ignore global rules
D) There are not enough trained pilots

23 Based on the text, which of the following was true before Atash and Lufthansa's team arrived?

A) Ariana had an excellent flight schedule but lacked pilots
B) Ariana operated random flights according to pilots' personal decisions
C) Customers got tickets easily, without paying any extra fees
D) The airline had five major engine failures in two years

24 How did Ariana's early reputation compare to its later one?

A) It was unknown globally at first but became respected over time
B) It was considered a giant airline in the region that eventually failed
C) It was once seen as a tiny yet respectable carrier before its decline
D) It had a dangerous reputation from the very beginning

Decide if the following statements agree with the information given in the text.

25 Ariana is banned from landing at the majority of airports in Europe and America.

A) True
B) False
C) Not Given

26 Atash, the manager, used to work in business in the USA before returning to Afghanistan.

A) True
B) False
C) Not Given

27 **After the Soviet occupation ended, Ariana's situation improved dramatically.**

A) True
B) False
C) Not Given

28 **There was once a fight between a pilot and a co-pilot on an Ariana flight, resulting in a crash.**

A) True
B) False
C) Not Given

29 **The Taliban replaced Ariana's female flight attendants with women from rural areas.**

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

PARAGLIDING IN AUSTRALIA

Paragliding is a type of free-flying sport that allows people to glide through the air using a lightweight, foot-launched aircraft. Unlike airplanes or helicopters, paragliders have no engines. Instead, they rely on wind currents and thermals (rising columns of warm air) to stay airborne. The flying wing, known as a canopy, is made from durable materials like nylon or polyester and is shaped to catch the air efficiently. The pilot sits in a harness that is suspended below the canopy by a series of strong lines, similar to those on a parachute. While it may seem similar to parachuting, many enthusiasts say that paragliding offers more control, longer airtime, and a smoother, more comfortable experience. It's often described as the closest humans can get to flying like a bird.

Like many adventure sports, the safety of paragliding largely depends on the behavior, training, and decisions of the person flying. Weather conditions play a major role too. A well-trained pilot who respects wind patterns and avoids risky decisions is unlikely to have accidents. In fact, paragliding is known to be one of the slowest forms of aviation, meaning that even if you do make a mistake, the descent is much gentler compared to powered flight. Modern equipment also includes safety devices such as reserve parachutes, GPS tracking, and variometers (to measure altitude). Beginners always fly under radio guidance, and most schools enforce strict weather rules.

Australia is one of the best countries in the world to learn paragliding, thanks to its wide open spaces, coastal cliffs, and favorable weather conditions. There are professional schools scattered across the country — from the Great Ocean Road in Victoria to the Blue Mountains in New South Wales and the coastal cliffs of Western Australia. Training usually begins on gentle slopes and progresses to higher flights. In the early days, you'll learn how to: You'll also attend theory classes on aerodynamics, weather, and emergency procedures. Most students can get a basic paragliding licence in around seven days of training. Once certified, you're free to fly solo at hundreds of approved sites across the country.

Paragliding is accessible to a wide range of people. There's no upper age limit, and many people in their 60s and even 70s take part regularly. The minimum age in Australia is 14, and you must have good eyesight, reasonable balance, and be in basic physical shape.

Contrary to popular belief, paragliding is not physically intense. Most of the time, you're relaxing in a seated position, gently gliding above the landscape. The most tiring part is often the hike back up the hill after landing, especially during training. The physical effort involved can help improve fitness and mental focus.

Many participants say that paragliding is not just a sport — it's a lifechanging experience. The peace, silence, and wide-open view from the sky provide a unique sense of freedom that's hard to describe.

Australia's diverse landscapes make it a perfect destination for paragliding adventures. From desert ridges to green mountains, golden beaches to urban skylines, the scenery from above is breathtaking. Some of the most popular paragliding sites include: Stanwell Park (NSW) – a coastal cliff site ideal for smooth takeoffs and long soaring flights Bright (Victoria) – known for its thermals and mountain views Canungra (Queensland) – offers great conditions year-round

, fill in the missing information in the numbered spaces.

PARAGLIDING IN AUSTRALIA - SUMMARY

A paraglider stays in the air by using wind and **30** _____. Safety in paragliding mostly depends on the pilot's training and **31** _____. In Australia, the minimum age for learning paragliding is **32** _____. While flying, paragliders often sit in a **33** _____ position.

Choose the correct answer A, B, C, or D.

34 **Why is paragliding considered relatively safe compared to other forms of aviation?**

A) It uses advanced technology like engines and autopilots
B) It always takes place in controlled environments
C) It is slower and causes less impact in case of errors
D) It requires physical strength and experience

35 **What is the main aim of the passage?**

A) To compare paragliding with other adventure sports
B) To explain why Australia is ideal for learning paragliding
C) To describe the experience and process of learning paragliding
D) To highlight the dangers and limits of paragliding

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

COMPUTERS

A computer is a machine that helps people do many tasks. It can process data, run programs, and show information on a screen. Every **Q1**_____ has parts like a keyboard, screen, and mouse. The **Q2**_____ lets the user type words and numbers into the computer.

Q3_____ use computers at home, in schools, and at work. A user can write documents, play games, or watch videos. Each program on the computer helps the user do something special. For example, one **Q4**_____ may help with drawing, while another helps with math.

The **Q5**_____ shows what the computer is doing. It displays data like pictures, text, and videos. When the user types on the keyboard, the computer takes that **Q6**_____ and shows it on the screen.

In today's world, computers are important tools. They help us learn, work, and have fun.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A bustling hub of activity, where shoppers gather to fill their baskets with everyday essentials and fresh ingredients.

B) A DIY enthusiast's paradise, filled with tools, materials, and expert advice for tackling any home improvement project.

C) Where fashion meets elegance, a place to discover the latest trends and express your unique style.

D) A haven for bookworms seeking solace and adventure within pages.

E) A kaleidoscope of sights, smells, and sounds, a marketplace where you can find anything and everything.

F) A time machine to the past, filled with forgotten treasures and whispered stories of bygone eras.

G) A place where you can enjoy a delicious meal, from fast food to fine dining.

H) A bustling hub of technology, where you can find the latest gadgets and electronic devices.

I) A journey into the world of art, where creativity and beauty are on display for all to appreciate.

J) A sanctuary for caffeine lovers, writers, and artists seeking inspiration and a warm, comforting atmosphere.

7

Q7

Walking into the bookshop feels like entering the past. The shelves are full of old, dusty books that seem to whisper old stories. The smell of aged paper and leather fills the air and invites you to explore. You could spend hours wandering around and finding special or forgotten books.

8

Q8

The market is full of noise, colors, and movement. Sellers shout out prices, bargaining with shoppers. The air smells like fresh fruits, spices, and cooking food. It's a lively, busy place where you can buy everything from exotic fruits to handmade items.

9

Q9

The boutique is perfect for fashion lovers. Stylish clothes and accessories are shown beautifully under soft lighting. The staff are helpful and know fashion well. They're ready to help you choose the best outfit for any event.

10

Q10

The coffee shop is a relaxing place for writers, artists, or anyone who needs coffee. The smell of fresh coffee mixes with quiet conversations. Soft lights and cozy chairs make it a warm spot to enjoy your drink and maybe read a book.

11

Q11

The hardware store is great for people who enjoy fixing things themselves. It's full of tools, paint, and materials for building. The staff know their stuff and are ready to help. It's the ideal place to find everything for home projects.

12

Q12

Entering the art gallery feels magical. The walls are covered with colorful art, sculptures, and photos, each showing the artist's ideas. Soft lighting makes the fine details stand out and helps you admire the talent behind each piece.

13

Q13

The grocery store is always busy. People walk through the aisles, picking up food and daily needs. You hear chatting, carts moving, and cheerful checkout staff. It's a place full of movement and sounds.

14

Q14

The antique store feels like a place full of old memories. You see dusty furniture, vintage items, and old photos that tell silent stories. The air smells like old wood and books. It's the perfect spot to find rare items and add vintage style to your home.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

I) A unique sensory experience
II) Getting back to basics
III) The gift that keeps on giving
IV) Variations in alcohol content
V) Old methods of transportation
VI) Culinary applications
VII) Making kefir
VIII) A fortunate accident
IX) Kefir gets an image makeover
X) Ways to improve taste

15. Paragraph A **16. Paragraph B** **17. Paragraph C**
18. Paragraph D **19. Paragraph E** **20. Paragraph F**

THE MAGIC OF KEFIR

A. The shepherds of the North Caucasus region of Europe were only trying to transport milk the best way they knew how – in leather pouches strapped to the side of donkeys – when they made a significant discovery. A fermentation process would sometimes inadvertently occur en route, and when the pouches were opened upon arrival they would no longer contain milk but rather a pungent, effervescent, low alcoholic substance instead. This unexpected development was a blessing in disguise. The new drink – which acquired the name kefir – turned out to be a health tonic, a naturally-preserved dairy product and tasty addition to our culinary repertoire.

B. Although their exact origin remains a mystery, we do know that yeast-based kefir grains have always been at the root of the kefir phenomenon. These grains are capable of a remarkable feat: in contradistinction to most other items you might find in a grocery store, they actually expand and propagate with use. This is because the grains, which are granular to the touch and bear a slight resemblance to cauliflower rosettes, house active cultures that feed on lactose when added to milk. Consequently, a bigger problem for most kefir drinkers is not where to source new kefir grains, but what to do with the ones they already have!

C. The great thing about kefir is that it does not require a manufacturing line in order to be produced. Grains can be simply thrown in with a batch of milk for ripening to begin. The mixture then requires a cool, dark place to live and grow, with periodic unsettling to prevent clumping (Caucasus inhabitants began storing the concoction in animal-skin satchels on the back of doors – every time someone entered the room the mixture would get lightly shaken). After about 24 hours the yeast cultures in the grains have multiplied and devoured most of the milk sugars, and the final product is then ready for human consumption.

D. Nothing compares to a person's first encounter with kefir. The smooth, uniform consistency rolls over the tongue in a manner akin to liquefied yogurt. The sharp, tart pungency of unsweetened yogurt is there too, but there is also a slight hint of effervescence, something most users will have previously associated only with mineral waters, soda or beer. Kefir also comes with a subtle aroma of yeast, and depending on the type of milk and ripening conditions, ethanol content can reach up to two or three percent – about on par with a decent lager – although you can expect around 0.8 to one per cent for a typical day-old preparation. This can bring out a dry edge of alcohol in the kefir's flavour.

E. Although it has prevailed largely as a fermented milk drink, over the years kefir has acquired a number of other uses. Many bakers use it instead of starter yeast in the preparation of sourdough, and the tangy flavour also makes kefir an ideal buttermilk substitute in pancakes. Kefir also accompanies sour cream as one of the main ingredients in cold beetroot soup and can be used in lieu of regular cow's milk on granola or cereal. As a way to keep their digestive systems fine-tuned, athletes sometimes combine kefir with yogurt in protein shakes.

F. Associated for centuries with pictures of Slavic babushkas clutching a shawl in one hand and a cup of kefir in the other, the unassuming beverage has become a minor celebrity of the nascent health food movement in the contemporary West. Every day, more studies pour out supporting the benefits of a diet high in probiotics. This trend toward consuming probiotics has engulfed the leisure classes in these countries to the point that it is poised to become, according to some commentators, "the next multivitamin". These days the word kefir is consequently more likely to bring to mind glamorous, yoga mat-toting women from Los Angeles than austere visions of blustery Eastern Europe.

PART 4

Questions 21–29

Read the following text for questions 21-29.

JASON

Jason sat up in bed and rubbed his eyes. It was unusually dark for 7 a.m., and his phone screen wouldn't turn on. He reached over to check the lamp on his bedside table, but it didn't work either. "Power cut," he thought, but something about the silence in the house felt wrong. Normally, he could hear the hum of the fridge or the sound of his neighbor's dog barking. But this morning, everything was still. Strangely still.

He pulled the curtain aside. The street outside looked exactly the same as always—except for one thing: it was completely empty. No early walkers. No delivery vans. Not even the usual cat that crossed his yard every morning. The houses around him

looked dark, their curtains still drawn. He checked his watch—8:10. People should have been awake by now.

Jason pulled on a hoodie and jeans and went downstairs. As he passed the hallway mirror, he noticed something odd—his reflection looked slightly distorted, as if the glass was bending the image. He stared at it for a few seconds, then shook his head. "Maybe I didn't sleep well," he muttered.

The kitchen was no better. The fridge was silent, and when he turned the tap, no water came out. He picked up his phone again—still no signal. Not even emergency calls. That had never happened before. He tried turning on the radio, hoping to catch a news broadcast, but it only gave static. He felt a knot forming in his stomach.

He stepped outside. The air felt heavy, thick—like just before a thunderstorm. There were no sounds, not even birds. It was like the world had been placed on mute. He walked slowly toward the end of his street, passing familiar houses that now looked strangely unfamiliar.

Then he heard it. Footsteps behind him. Not rushed—calm, slow, steady. He turned sharply. No one. But just as he was about to convince himself it was nothing, he saw someone standing at the far corner. A tall figure in a long, dark coat. Not moving. Just... watching.

Jason froze. Something about the figure made him uneasy. He couldn't see their face—it was covered by a hood—but he could feel the stare. Then the figure slowly lifted a hand and waved.

He took a few steps backward, unsure whether to shout or run. Suddenly, a hand grabbed his shoulder from behind. He jumped and spun around, fists clenched.

"Man, relax! It's just me," Leo said, wide-eyed. Jason let out a breath. "You scared me to death. Where have you been?" "I woke up like you. No power, no people. I tried calling you, but I couldn't get through. What's happening?" Jason pointed toward the corner. "Did you see that guy?" Leo nodded. "Yeah. I saw him earlier. He was standing outside my window." They both looked back at the corner. The figure was gone.

Suddenly, a loud, deep hum filled the air. It was like the sound of a distant engine, but it seemed to come from everywhere at once. The ground vibrated slightly beneath their feet.

"What if... this isn't just a blackout?" Jason whispered.

Leo's face was pale. "Then we're not just dealing with a power cut."

Choose the correct answer A, B, C, or D.

21 **What is Jason's first indication that something is seriously wrong?**

A) He sees a man standing in his hallway
B) Everything is unusually silent and the power seems out
C) A neighbor warns him about an emergency
D) He hears a loud hum as soon as he wakes up

22 **Which detail in the text suggests that something more than an ordinary blackout might be occurring?**

A) The neighbors are using candles in their windows
B) The street lamps are still on
C) Jason's reflection in the mirror looks slightly distorted
D) Jason hears the noise of a thunderstorm approaching

23 **What happens when Jason first notices the mysterious figure in the dark coat?**

A) The figure calls out to Jason
B) The figure immediately disappears
C) The figure waves from a distance but doesn't approach
D) The figure approaches Jason and demands help

24 **How do Jason and Leo react when they hear the loud, deep hum?**

A) They ignore it because they assume it's a distant truck engine
B) They realize it might mean more than a simple power outage
C) They call the police to report the unusual sound
D) They rush inside and turn on the television for news

Decide if the following statements agree with the information given in the text.

25 **Jason notices that there is no usual morning barking from the neighbor's dog.**

A) True
B) False
C) Not Given

26 **The text says that water from the kitchen tap runs but comes out ice cold.**

A) True
B) False
C) Not Given

27 **Jason sees the neighborhood cat crossing his yard, as it normally does.**

A) True
B) False
C) Not Given

28 **Leo mentions that the same tall figure stood outside his window earlier.**

A) True
B) False
C) Not Given

29 **By the end of the text, the identity of the tall, hooded figure is revealed.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

VERTICAL FARMING

As urban populations grow and arable land becomes increasingly limited, the demand for alternative methods of food production is higher than ever. Among these innovative approaches, vertical farming has gained significant attention. This method involves cultivating crops in vertically stacked layers, often within controlled indoor environments such as repurposed warehouses, skyscrapers, or specially designed containers. Unlike traditional agriculture, which relies heavily on sunlight, rainfall, and vast expanses of land, vertical farming utilizes LED lighting, climate control systems, and hydroponic or aeroponic techniques to grow food more efficiently and in less space.

The appeal of vertical farming lies largely in its resource efficiency. In conventional agriculture, vast amounts of water are required, much of which is lost through evaporation or poor irrigation methods. Vertical farms, however, use closed-loop irrigation systems that recycle water and nutrients, resulting in up to 95% less water usage. Moreover, because the growing environment is completely enclosed, crops are protected from pests and diseases, drastically reducing or even eliminating the need for chemical pesticides. This not only lowers environmental damage but also contributes to healthier produce.

Another key advantage of vertical farming is its potential to shorten supply chains. In many urban regions, fresh produce must travel hundreds or even thousands of kilometers before reaching consumers. This long-distance transportation not only increases food prices but also contributes significantly to greenhouse gas emissions. Vertical farms can be located directly in cities—sometimes within supermarkets or on rooftops—allowing produce to be harvested and sold locally, often on the same day. This reduces spoilage, enhances freshness, and offers a more sustainable alternative to long-distance food distribution.

Despite its promise, vertical farming faces several technological and economic challenges. The cost of establishing a vertical farm can be prohibitive, particularly in areas where real estate prices are high. Specialized equipment, advanced climate control technologies, and energy consumption—especially from artificial lighting—can lead to high operational expenses. Although some farms have begun using solar panels or other renewable energy sources to reduce their carbon footprint, the reliance on electricity remains a major obstacle to scalability.

Additionally, vertical farming is currently limited in terms of the variety of crops it can support. Fast-growing, low-height crops such as lettuce, kale, spinach, and herbs thrive in vertical systems. However, crops like corn, wheat, rice, and fruit-bearing trees require much more space and energy to cultivate, making them unsuitable for vertical environments in their current form. As a result, vertical farming is best viewed as a supplement to traditional agriculture, rather than a full replacement.

Proponents of vertical farming argue that as technological innovations continue, costs will decrease, and efficiency will increase. Developments in automation, robotics, artificial intelligence, and renewable energy integration could help overcome many of the current limitations. For example, AI-driven monitoring systems can precisely control temperature, humidity, and nutrient levels, ensuring optimal growth conditions while reducing waste.

Critics, however, caution against overestimating the benefits of vertical farming without considering its energy dependence and limited crop diversity. They argue that placing such systems in densely populated areas may also compete with other urban development needs, such as housing and infrastructure. Furthermore, the ecological cost of producing artificial materials for building and maintaining vertical farms should not be overlooked when calculating their long-term sustainability.

, fill in the missing information in the numbered spaces.

VERTICAL FARMING - SUMMARY

Vertical farming allows food to be produced in places like skyscrapers and containers using **30**_____ systems to control environmental conditions. Due to closed-loop irrigation, vertical farms can reduce water usage by up to **31**_____ percent. Growing crops directly in cities helps cut down transport-related **32**_____ emissions. One major drawback of vertical farming is its high reliance on **33**_____ for lighting and other systems.

Choose the correct answer A, B, C, or D.

34 Why is vertical farming not considered a complete substitute for traditional agriculture?

A) It cannot grow any vegetables
B) It produces higher amounts of waste
C) It requires too many people to manage
D) It is unsuitable for many common crops

35 What is the writer's attitude toward the future of vertical farming?

A) Skeptical, due to its failure in many cities
B) Hopeful, because innovation may solve its current problems
C) Neutral, as vertical farming has already replaced old methods
D) Negative, as energy use outweighs all the benefits

MOCK TEST 43

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

A PICNIC ON STARFISH ISLAND

Last weekend, my family and I took a small boat to a beautiful island. The **Q1**_____ was known for its soft sand and clear blue waters. As we arrived, we found the perfect place to set up our picnic under a shady tree near the shore. Children played on the **Q2**_____, building castles and collecting starfish. The **Q3**_____ were bright orange and lay gently on the wet sand. We reminded the kids to look but not touch, as the starfish are living creatures. After enjoying our **Q4**_____, we took a walk around the island. We discovered another quiet **Q5**_____ where the sand was even softer, and the view of the sea was breathtaking. We watched as a small **Q6**_____ passed by, its sail catching the wind. It was a wonderful day filled with laughter, nature, and the simple joys of a family picnic on a peaceful island.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A place where people can come together to enjoy live music, socialize, and dance the night away.

B) A group of passionate individuals who train together, honing their skills in teamwork and goal scoring.

C) A place where players of all levels come together to challenge themselves physically and mentally, enjoying the camaraderie of fellow tennis enthusiasts.

D) A place where the sound of shuttlecocks hitting rackets and friendly competition fill the air.

E) A group of graceful individuals who express themselves through movement and rhythm, learning various dance styles and performing with passion and precision.

F) A group of adventurous individuals who enjoy exploring the great outdoors and tackling challenging hikes.

G) A group of skilled craftspeople who gather to create beautiful and functional objects using traditional techniques.

H) A group of dedicated athletes who work hard to perfect their strokes and improve their endurance in the water.

I) A haven for finding inner peace through stretching, breathing, and relaxation.

J) A disciplined group where students learn self-defense techniques, improve their fitness, and gain confidence through rigorous training.

7

Q7

The badminton club is a lively place, filled with the sound of shuttlecocks hitting rackets and the friendly chatter of players. They play on a court, moving quickly and strategically to hit the shuttlecock over the net. It's a great way to get some exercise, improve your reflexes, and enjoy some friendly competition.

8

Q8

The yoga studio is a peaceful haven, where people come to stretch their bodies and calm their minds. The instructor guides the class through a series of poses, focusing on breathing and relaxation. It's a great way to build strength and flexibility, while also finding a sense of inner peace.

9

Q9

The football club is a passionate group, full of energy and enthusiasm for the sport. They practice on a field, honing their skills in passing, shooting, and teamwork. It's a great way to get involved in a team sport, learn valuable life skills, and enjoy the thrill of scoring goals.

10

Q10

The swimming club is a group of dedicated athletes, who train hard to improve their strokes and endurance. They practice in a pool, gliding through the water with grace and efficiency. It's a great way to get a fullbody workout, improve your fitness, and learn valuable water safety skills.

11

Q11

The tennis club is a competitive group, where players of all levels come together to test their skills. They play on a court, rallying back and forth with powerful shots and clever tactics. It's a great way to challenge yourself physically and mentally, while also enjoying the camaraderie of other tennis enthusiasts.

12

Q12

The hiking club is a group of adventurous souls, who love to explore the outdoors. They hike through forests, mountains, and valleys, enjoying the beauty of nature and the challenge of a good trek. It's a great way to stay active, get fresh air, and connect with the natural world.

13

Q13

The martial arts club is a disciplined group, where students learn the techniques and philosophy of their chosen art. They practice self-defense skills, improve their fitness, and gain confidence through rigorous training. It's a great way to learn a new skill, challenge yourself physically and mentally, and find a sense of purpose.

14

Q14

The dance club is a group of graceful individuals, who express themselves through movement and rhythm. They learn various dance styles, from ballroom to hip hop, and perform with passion and precision. It's a great way to improve your coordination, build confidence, and enjoy the beauty of movement and music.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

i) A Collection of Records
ii) Without a Single Break
iii) Hooping Back In Fashion
iv) Hooping Appeals to Both Genders Alike
v) Fun, Fitness or Treatment?
vi) The Hula Hoop Goes Global
vii) Spinning Multiple Hoops
viii) Hooping and Running at the Same Time

15. Paragraph A **16. Paragraph B** **17. Paragraph C**
18. Paragraph D **19. Paragraph E** **20. Paragraph F**

THE HULA HOOP

A. In 1950s America, Californian toy company Wham-O perfected a plastic version of the toy which attracted global interest. In as little as four months, 25 million of the hoops were sold. Within two years, over 100 million had been sold, starting a trend which swept throughout the country. In the USA alone, 50,000 were produced in a single day. Many people in countless corners of the world developed a passion for the trend, from infants to grandparents and from factory workers to CEOs.

B. Many popular songs were written about the hula hoop during the 1960s. Nevertheless, the toy's popularity began to fade over the next few decades. However, the hula hoop never completely vanished from the public arena and most toys stores continued to stock the toy. Recently it staged a spectacular revival, rallying a new generation of fans. Even the wife of the President of the USA was spotted 'hooping' on the White House Lawn. Nowadays, the circular toy has been incorporated in a range of fitness schemes.

C. The hula hoop is associated with many different world records. In 1960, a group of American 11 year olds established a record for the longest 'non-stop' spinning session, lasting precisely 11 hours and 34 minutes. In 1976, an even younger contestant won an uninterrupted 10 hour 47 minutes contest at just eight years old. The present-day record holder, Bric Sorenson, was able to keep his hula hoop spinning from April 2 to April 6, 1987, accumulating an incredible 90 non-stop hours.

D. Another record is for 132 hoops spun by an individual at once. This record was established by Paul Blair on November 11, 2009, earning him the nickname "Dizzy Hips." This act involves participants holding all the hula hoops without any help from anyone else and spinning them between the shoulders and hips. As soon as the hoops have started to rotate competitors cannot touch them again with their hands. If they do, their record attempt fails.

E. In another record event, the contestant runs while simultaneously spinning. A ribbon tied around the hoop allows the judges to check if it is still revolving. The hoop must be rotating before crossing the starting line. If it ceases to spin, then contestants must stop and start it again. This is the only time that they can touch the hoop with their hands. The current female holder for this record is Australian Boo Crystal Chan, who completed 10 Km in one hour, 27 minutes and 25 seconds on March 12th 2009. The male champion, Paul "Dizzy Hips" Blair, was 20 minutes and 50 seconds faster than Boo.

F. In 2005, an American man, Ashrita Furman, successfully spun the world's largest hula hoop at 13.88 metres in diameter. While the heaviest recorded was actually a tractor tyre which weighed 53 pounds! This monster was spun for a total of 71 seconds in Austria, 2000, by Roman Schedler. And in Chung Cheng sport arena, Taiwan, on October 28, 2,496 people managed to spin their hula hoops at the same time for over three minutes without dropping one, making it the world record for mass simultaneous hula hooping.

PART 4

Questions 21–29

Read the following text for questions 21-29.

OUTDOOR EXERCISE

In an age of gym memberships, online fitness classes, and high-tech workout machines, many people have rediscovered a much simpler and more natural way to stay healthy—exercising outdoors. Whether it's jogging through a park, hiking in the mountains, cycling along a countryside path, or simply doing yoga in a quiet garden, outdoor exercise is gaining popularity around the world. Advocates claim it improves not just physical health, but mental and emotional well-being as well.

One of the major benefits of outdoor exercise is its impact on mental health. Numerous studies have shown that spending time in natural environments helps reduce stress, anxiety, and symptoms of depression. Exposure to natural light stimulates the production of serotonin, a chemical in the brain that promotes a positive mood. In contrast, indoor environments—especially those with artificial lighting and poor ventilation—can feel restrictive and may even increase feelings of fatigue and boredom during workouts.

In terms of physical health, outdoor activities often provide more diverse movements than indoor workouts. For example, running on a trail with natural inclines, uneven surfaces, and obstacles engages different muscle groups and improves balance more than running on a treadmill. Moreover, outdoor exercise often combines both cardiovascular and strength

training without the need for machines. It also encourages people to stay active for longer periods, especially when they are distracted by scenic views or social interaction.

Indoor exercise, however, offers its own unique advantages. Gyms provide controlled environments where individuals can work out regardless of the weather. Equipment like treadmills, stationary bikes, and weight machines allow for targeted training. In addition, many people find motivation through structured fitness classes or personal trainers. For beginners or those with physical limitations, indoor spaces can offer safer and more manageable routines.

Nevertheless, outdoor workouts are often more cost-effective and accessible. No membership is required to walk through a forest or run in a park. People of all ages and fitness levels can participate without the need for expensive gear. Outdoor exercise also fosters a stronger connection to the environment and one's community. Group hikes, running clubs, and outdoor boot camps are becoming increasingly popular in urban areas, providing both fitness and social benefits.

Experts suggest that combining both types of exercise—indoor and outdoor—may be the most effective approach. While indoor training allows for consistency and goal-based tracking, outdoor workouts offer variety and mental refreshment. The key is to create a balanced routine that suits one's lifestyle, preferences, and health goals. Seasonal changes and location may also affect which option is more practical at different times of the year.

Choose the correct answer A, B, C, or D.

21 **According to the passage, what is one major psychological benefit of exercising outdoors?**

A) Improved ability to set goal-based targets
B) Higher production of serotonin that lifts mood
C) Greater accuracy in tracking workout data
D) Guaranteed reduction in physical fatigue

22 **Which statement best explains why trail running may develop more muscle groups than treadmill running?**

A) Trails motivate people to run faster than treadmills do
B) Natural inclines and uneven ground activate additional stabilising muscles
C) Treadmills restrict the length of a workout session
D) Treadmills provide less cushioning than outdoor surfaces

23 **The passage lists which of the following as an important advantage of indoor exercise?**

A) Lower long-term cost
B) Better air quality than the outdoors
C) Freedom from weather interruptions
D) Higher calorie burn per minute

24 **What overall recommendation do experts give at the end of the text?**

A) Focus on indoor training during winter and outdoor training during summer
B) Alternate weekly between indoor and outdoor workouts to avoid boredom
C) Combine indoor and outdoor exercise to create a balanced routine
D) Choose outdoor exercise unless you have serious physical limitations

Decide if the following statements agree with the information given in the text.

25 **Exposure to natural light can stimulate the brain chemical serotonin.**

A) True
B) False
C) Not Given

26 **Outdoor exercise is always less expensive than purchasing a gym membership.**

A) True
B) False
C) Not Given

27 **The passage suggests that some indoor environments may feel restrictive and lead to boredom.**

A) True
B) False
C) Not Given

28 **Indoor facilities can be safer and easier for beginners or people with physical limitations.**

A) True
B) False
C) Not Given

29 **According to the text, outdoor boot camps are becoming less popular in most large cities.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

FALCONS: MASTERS OF PRECISION HUNTING

Falcons are known for their exceptional speed, vision, and hunting skills. Unlike many other birds of prey, they do not rely solely on surprise or brute strength; instead, they use high-altitude flight, aerial dives, and astonishing precision to catch their prey mid-air. These characteristics make falcons, particularly peregrine falcons, some of the most efficient hunters in the bird kingdom.

One of the most remarkable features of a falcon is its beak structure. While most birds of prey have strong, curved beaks for tearing flesh, falcons possess a special "tomial tooth"—a sharp notch on the side of their upper beak. This allows them to kill prey instantly by severing the spinal cord at the neck. Unlike hawks or eagles, which often use their powerful talons to crush or immobilize prey, falcons rely more on their beak for the kill. This makes their hunting technique both cleaner and faster. Falcons usually hunt small- to medium-sized birds, such as pigeons, doves, and starlings. They are also known to eat small mammals, including mice and bats, depending on availability. Their diet is strictly carnivorous, and they prefer fresh, warm meat. A falcon rarely eats carrion, as it prefers to catch its food alive using speed and surprise. While hunting, a falcon can reach speeds of over 300 km/h during a stoop—a high-speed dive used to strike prey in flight.

What distinguishes falcons from other birds of prey is their unique flight strategy. Many raptors soar or glide to locate prey below. Falcons, however, often hunt at high altitudes, then dive steeply toward the target. This vertical dive gives them both

speed and force, allowing them to knock prey unconscious or dead instantly. Their long, pointed wings and streamlined bodies are perfectly adapted for this purpose. Moreover, their nostrils have bony structures that prevent damage from intense air pressure during dives—a feature not seen in most other birds.

After a successful hunt, falcons usually retreat to a quiet perch—a tree branch, cliff edge, or high tower—where they consume their meal undisturbed. They prefer solitude while eating and may cache leftovers for later consumption. Falcons eat around once or twice a day, depending on the energy spent and the size of the prey.

Despite being high-energy hunters, falcons know when to rest. They conserve energy during the heat of the day by perching in shaded areas, often motionless for hours. This not only helps them avoid overheating but also allows them to recover strength for the next hunt. During molting season or poor weather, falcons reduce their activity significantly and rely on stored body fat. Some species, like the saker falcon, have been observed sleeping for short intervals during the day, though they remain alert to any danger.

In summary, falcons are finely tuned predators that combine physical adaptations with behavioral intelligence. Their unique use of the tomial tooth, extreme dive speed, and calculated resting habits set them apart from other birds of prey. Every aspect of a falcon's life—from how it hunts to how it rests—is designed for efficiency, precision, and survival.

, fill in the missing information in the numbered spaces.

FALCONS: MASTERS OF PRECISION HUNTING - SUMMARY

Falcons use a sharp structure on their beak called a **30** _____ to kill prey quickly. During a high-speed dive, falcons can reach speeds over **31**_____ kilometers per hour. A physical feature in a falcon's nose protects it from damage caused by high **32**_____. Falcons usually rest in the shade to avoid excessive **33** _____ during hot periods.

Choose the correct answer A, B, C, or D.

34 **How does a falcon's hunting style differ from that of most other birds of prey?**

A) It uses stronger talons instead of its beak
B) It attacks prey while gliding from low altitudes
C) It dives vertically at high speed to hit prey mid-air
D) It relies on group coordination to corner prey

35 **What is the main idea of the passage?**

A) Falcons are social hunters that rely on teamwork and vocal calls
B) Falcons' behavior and body are adapted for precision and survival
C) Falcons are less efficient than hawks but faster than eagles
D) Falcons rely on talon strength rather than specialized beaks

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

AUTUMN

Autumn is a season when the leaves on the trees change color and fall to the ground. The green color disappears as the **Q1** _____ lose a natural chemical called chlorophyll. This chemical is what helps plants make food using sunlight during spring and summer. When **Q2**_____ becomes weaker and days grow shorter in autumn, **Q3**_____ cannot produce enough food. As a result, the leaves turn yellow, orange, or red and eventually drop off. **Q4**_____ also affects animals. Some animals start to prepare for winter by collecting food and building shelters. Since there is less **Q5** _____ in winter, they must plan ahead. Bears and squirrels are good examples—they either store food or sleep through the cold months. In this season, both plants and **Q6** _____ change their behavior. They respond to changes in sunlight, temperature, and the availability of food. That's what makes autumn so magical and important in nature.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A friend wants to spend a holiday learning to handle a small boat.

B) Your friend can cook and is looking for a job in an English pub.

C) You are looking for a quiet hotel where you can organize a training seminar.

D) You are looking for a hotel for a romantic weekend with your partner.

E) You have been asked to find a hotel with facilities for large meetings and dinners.

F) You have a lot of experience in the catering business and would like to help an English hotel.

G) You want to run a restaurant and expect a high salary.

H) You want to spend your holiday in the sea.

I) You are a cook and are looking for a job with accommodation in a small hotel

J) You and your partner are looking for catering jobs where you can live together in one place.

7

Q7

Award-winning 30-seater restaurant specializing in fine seafood requires: RESTAURANT MANAGER Relevant experience and references essential. Excellent salary. Forward electronic CV to Mr Orlando Peracca

8

Q8

Wallford Hotel • Well-maintained Victorian hotel centrally situated close to the sea • Picturesque private harbour with sailing school in walking distance

9

Q9

SECOND CHEF For a busy country pub and restaurant in South Warwickshire. Minimum three years' experience.

10

Q10

The Highland Hotel Outdoor swimming pool (summer only) and boat hire possible. Ideal for touring in beautiful countryside, whisky tasting. Seminar arrangements for small groups.

11

Q11

WHITE HOUSE HOTEL Watford's most central and luxurious hotel, 87 en-suite bedrooms and excellent conference and banquet rooms.

12

Q12

Pendower Beach House Hotel Family-run hotel near Cornwall seeks responsible, self-motivated Chef for restaurant seating 40. Hotel flat available.

13

Q13

QUARLTON MANOR 17th century castle with spectacular views. Galleried dining hall serving acclaimed candlelight dinners for two with local food.

14

Q14

Assistant Manager Previous experience in the hotel/restaurant sector essential. If you have ambition and self-motivation apply now to: Ian Gray, Swans Hotel

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below.

List of Headings:

A) Destination resort
B) Definition of the term "resort"
C) Spa resort
D) Seaside resorts
E) A famous historic resort
F) All-inclusive resort
G) Resort towns.
H) Resort that provides a variety of lodging

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

TYPES OF TOURIST RESORTS

1. A commercial establishment at a resort destination such as a recreational area, a scenic or historic site, a theme park, a gaming facility or other tourist attraction may compete with other businesses at a destination. Consequently, another quality of a this resort is that it offers food, drink, lodging, sports and entertainment, and shopping within the facility so that guests have no need to leave the facility throughout their stay.

2. Towns which are resorts — or where tourism or vacationing is a major part of the local activity — are sometimes called resort towns. If they are by the sea they are called seaside resorts. Inland resorts include ski resorts, mountain resorts and spa towns. Towns such as Sochi in Russia, Sharm el Sheikh in Egypt, Bar- izo in Spain, Cortina d'Ampezzo in Italy, are wellknown resorts.

3. A holiday village is a type of self-contained resort in Europe, where the accommodation is generally in villas. A holiday camp in the United Kingdom refers to a resort where the accommodation is in chalets. The term "holiday park" is used for a resort where the accommodation includes static caravans and chalets.

4. In the United Kingdom, many seaside towns have turned to other entertainment industries, and some of them have a good deal of nightlife. The cinemas and theatres often remain to become host to a number of pubs, bars, restaurants and nightclubs. Most of their entertainment facilities cater to local people and the beaches still remain popular during the summer months.

5. An all-inclusive resort charges a fixed price that includes most or all items. At a minimum, most inclusive resorts include lodging, unlimited food, drink, sports activities, and entertainment for the fixed price. In recent years, the number of resorts in the United States offering "all-inclusive" amenities has decreased dramatically; in 1961, over half offered such plans and in 2007, less than ten percent do so.

6. A spa resort is a short term lodging facility with the primary purpose of providing individual services for spa-goers to develop healthy habits. Historically many such spas were developed at the location of natural hot springs or sources of mineral waters. Typically over a seven-day stay, such facilities provide a comprehensive program that includes spa services, physical fitness activities, wellness education, healthy cuisine and special interest programming.

PART 4

Questions 21–29

Read the following text for questions 21-29.

BUILDING THE FUTURE WITHOUT LOSING THE PAST

Uzbekistan's cities are changing rapidly. New housing, hotels, offices and public buildings are appearing alongside neighbourhoods shaped by centuries of traditional construction. This growth has created a difficult question for architects: how can modern buildings provide the comfort and efficiency expected today without losing the climatic intelligence and cultural identity of older architecture? Increasingly, designers are finding ways to combine traditional methods with modern technology rather than treating the two approaches as opposites. x One of the clearest examples is the traditional inner courtyard. In older homes, rooms often face a protected central space rather than opening directly onto the street. The courtyard can provide shade, k support natural ventilation and create a cooler microclimate during hot weather. Contemporary designers are adapting this idea in apartment complexes, schools and community buildings. The shape v may be more modern, but the environmental function remains similar: the building is organised to reduce heat and make outdoor space usable for longer periods. o Digital technology is also changing the design process. Before construction begins, architects can create n detailed computer models showing how sunlight, heat and air will move through a proposed building.

These simulations allow them to examine possible problems before construction. A design can then be adjusted while changes are still relatively cheap. This is especially useful in a country where summer u temperatures can place heavy demands on cooling systems. rg One feature requiring careful control is extensive glazing. Large glass windows can make interiors bright and attractive, but if they face strong sunlight without protection, rooms may overheat and air-conditioning systems must work harder. Modern buildings therefore use shading devices, deeper window frames, high-performance glass or carefully chosen orientations. The problem is not glass itself; Traditional inner courtyards were not used only for cooling. They also provided privacy, family gathering d space and a protected place for children or domestic work. Modern courtyard designs can likewise create flexible spaces for social activities, gardens or shared facilities. However, it would be inaccurate to say o that every modern building in Uzbekistan consumes excessive energy. Performance varies widely depending on design, materials, orientation and the systems installed. z At the same time, architects do not need to reproduce old buildings exactly. Traditional principles can be translated into contemporary forms. Thick walls, shaded openings, screened facades and courtyards can k inspire modern solutions without producing a direct copy of a historic house. This approach allows e designers

to respect local knowledge while meeting new structural, safety and functional requirements.

Technology is most successful when it is used with an understanding of how people actually use b buildings. Sensors and automated controls can improve efficiency, but data alone cannot determine whether a courtyard feels comfortable, whether public space supports social life, or whether residents value privacy. For this reason, modern designers increasingly combine digital analysis with observation @ of local habits and the accumulated knowledge found in traditional architecture. The future of Uzbek building design may therefore depend less on choosing between 'old' and 'new' than on learning how the two can work together.

Choose the correct answer A, B, C, or D.

21 What is the first important point about modern architecture in the passage?

A) Traditional methods should be completely abandoned
B) Architects are finding ways to combine traditional and modern methods
C) Only foreign architectural styles should be used
D) All new buildings should copy historic monuments

22 What is one main function of an inner courtyard?

A) To store construction equipment
B) To help people deal with hot weather by providing shade and ventilation
C) To increase traffic around a building
D) To make buildings taller

23 How does digital technology help architects?

A) It replaces architects during construction
B) It helps them examine possible design problems before construction
C) It prevents them from using traditional ideas
D) It guarantees that every building will use no energy

24 What problem can large glass windows create?

A) They may cause overheating if sunlight is not controlled
B) They always make rooms too dark
C) They prevent any natural ventilation
D) They cannot be used in modern buildings

Decide if the following statements agree with the information given in the text.

25 Traditional inner courtyards were used only for cooling.

A) True
B) False
C) Not Given

26 Modern buildings can use courtyard spaces for social activities.

A) True
B) False
C) Not Given

27 All modern buildings in Uzbekistan consume too much energy.

A) True
B) False
C) Not Given

28 Architects can use traditional principles without reproducing old buildings exactly.

A) True
B) False
C) Not Given

29 Modern technology should be used together with an understanding of building users' needs.

A) True
B) False
C) Not Given

PART 5 — Questions 30–35

Read the following text for questions 30-35.

RESTORING URBAN RIVERS

For much of the twentieth century, rivers running through large cities were treated primarily as pieces of infrastructure. Their banks were straightened, natural vegetation was removed, and in some places the channels were enclosed in concrete so that water could be carried away rapidly after heavy rain. These alterations supported industrial development and protected valuable land from frequent flooding, but they also separated urban residents from waterways that had once formed an important part of the local landscape. Today, many planners are reconsidering this approach as cities attempt to become healthier and more resilient.

One reason for this change is the growing recognition that heavily engineered rivers often support relatively little wildlife. Natural rivers contain pools of different depths, irregular banks and areas of x vegetation that provide shelter and food for numerous species. By contrast, a uniform concrete channel offers few such opportunities. Restoration projects therefore frequently begin by creating more varied k habitats. Engineers may reshape riverbanks, introduce native plants and reconnect sections of the river with nearby wetlands. The objective is not to reproduce an untouched landscape perfectly, but to restore v enough ecological complexity for biodiversity to increase. o Water quality presents another major challenge. In older cities, storm drains and sewage systems were sometimes designed to share the same underground pipes. During intense rainfall, these systems can n become overloaded, allowing untreated wastewater to enter rivers. Modern projects increasingly use green infrastructure to reduce this pressure. Parks, planted roofs and specially designed roadside areas u can absorb rainfall before it reaches drains. Because less water enters the pipe network at once, the risk of sewage overflow is reduced and urban rivers receive fewer pollutants. rg Restoration can also alter the way a river responds to floods. Traditional flood-control schemes often attempted to move water downstream as quickly as possible. This may protect one district while increasing the volume of water reaching another area in a short period. Some contemporary schemes tu instead give rivers additional space. Reconnecting a channel with its floodplain allows excess water to spread temporarily across land designed to tolerate occasional flooding. Although this requires careful planning, it can reduce the height of flood peaks farther downstream. d The social effects can be substantial as well. Where inaccessible riverbanks are replaced by paths, parks and public spaces, residents gain new places for walking, cycling and recreation. Businesses may also be o attracted to regenerated waterfronts.

However, these improvements can create an unintended problem.

As an area becomes more desirable, property prices and rents may rise, potentially forcing lower-income z residents to move elsewhere. Urban researchers describe this process as green gentrification and argue that environmental improvements should therefore be accompanied by policies that protect existing k communities. e Restoring a river is rarely a one-time engineering exercise. Newly planted vegetation needs time to become established, invasive species may return, and changing rainfall patterns can create conditions b that were not anticipated when a project was designed. Long-term monitoring is therefore essential.

Scientists measure water quality, record changes in wildlife populations and examine how restored sections perform during storms. The information collected can then be used to modify management practices or improve later projects.

@ The broader lesson is that urban rivers perform several functions simultaneously. They carry water, provide habitat, influence flood risk and shape the quality of public space. A project that focuses exclusively on appearance may fail ecologically, while one designed only for wildlife may overlook the needs of surrounding communities. Successful restoration therefore depends on balancing environmental, engineering and social objectives rather than treating any single goal as sufficient.

, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

RESTORING URBAN RIVERS - SUMMARY

Compared with concrete channels, natural rivers contain a greater variety of **30** _____ that can support wildlife. Green infrastructure can absorb **31** _____ before it enters overloaded drainage systems. Allowing a river to reconnect with its **32** _____ can help lower flood peaks farther downstream. Rising housing costs following environmental improvement may contribute to green **33** _____

Choose the correct answer A, B, C, or D.

34 Why does the writer say long-term monitoring is necessary after a river has been restored?

A) It guarantees that invasive species will disappear permanently

B) It allows authorities to replace natural vegetation with engineered structures

C) It provides evidence that can be used to adjust management as conditions change

D) It prevents rainfall patterns from changing unexpectedly

35 Which statement best represents the writer's overall view of urban river restoration?

A) It is most successful when ecological, technical and community needs are considered together

B) Its principal purpose should be to increase the commercial value of waterfront land

C) Natural rivers should always be returned to exactly the condition they were in before cities developed

D) Flood prevention is more important than every other objective of restoration. ANSWER SHEET PART 1 PART 2 PART 3 PART 4 PART 5 1. _____ 7. _____ 15. _____ 21. _____ 30. _____ 2. _____ 8. _____ 16. _____ 22. _____ 31. _____ 3. _____ 9. _____ 17. _____ 23. _____ 32. _____ 4. _____ 10. _____ 18. _____ 24. _____ 33. _____ 5. _____ 11. _____ 19. _____ 25. _____ 34. _____ 12. _____ 20. _____ 26. _____ 35. _____ 6. _____13. _____ 27. _____ 14. _____ 28. _____ 29. _____

LOOKING FOR A NEW EARTH

For thousands of years, humans have explored the Earth. Nowadays, we are exploring space. Astronomers are the modern-day explorers. Currently, many **Q1**_____ are looking for new planets and new places for humans to live in the future. But where do astronomers start looking?

First of all, astronomers look for a star. That's because our own Earth orbits a star (the Sun). More importantly, it is the correct distance from the Sun for heat and light. So when astronomers have found the **Q2**_____ they look at the planets around it. In recent years, astronomers have found nearly 400 new planets with stars. Unfortunately, many of these **Q3** _____ are either too near to the star or too far away.

However, if the planet is in a good position, astronomers **Q4** _____ for three key things: water, air and rock. Water is important because all life needs water. Humans can drink it and they can also grow plants with water. And **Q5**_____ produce air for humans to breathe and food to eat. So all life on other planets will need water and air. **Q6**_____ on a planet is also important. That's because there is often water under the rocks.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A cozy spot near a fireplace, perfect for enjoying a warm drink and a good book.

B) A unique dining experience with breathtaking city views, a cool breeze, and a touch of romance.

C) A breathtaking experience with panoramic views, fresh mountain air, and a feeling of accomplishment.

D) A bustling marketplace with vibrant stalls, delicious street food, and a lively atmosphere.

E) A tranquil spot by a lake, perfect for a relaxing afternoon with loved ones.

F) A peaceful escape surrounded by towering trees and lush greenery, offering a magical atmosphere.

G) A casual and convenient option, ideal for a quick bite and peoplewatching in the city.

H) A leisurely picnic with a scenic backdrop, featuring a flowing river and the sound of water.

I) A tranquil escape surrounded by blooming flowers and fragrant herbs, perfect for a romantic date.

J) A quintessential summer experience with the sound of waves crashing and the warmth of the sun.

7

Q7

This picnic spot next to a quiet lake is peaceful and beautiful. You can lay out your blanket on soft grass, listen to calm waves, and enjoy the clean air. It's the perfect place to relax and spend quality time with your loved ones.

8

Q8

This forest picnic area is calm and full of tall trees and greenery. Sunlight shines through the leaves, making it feel magical. You can enjoy nature's beauty, hear birds singing, and have a quiet meal in a peaceful place.

9

Q9

If you want a simple and quick picnic, this park bench is perfect. Grab some snacks or a takeaway sandwich and enjoy your food while watching people and the park. It's a nice spot in the middle of the city to rest and unwind.

10

Q10

A picnic on the beach gives you the full summer feeling. You can hear the waves, feel the warm sun, and smell the sea. Enjoy your food with a view of the ocean, build sandcastles, and relax under the sun.

11

Q11

Take your picnic to the top of a mountain for amazing views. After a good hike, enjoy the fresh mountain air and feel proud of reaching the top. It's a perfect place for a picnic with a view you won't forget.

12

Q12

Hidden in a quiet garden, this picnic spot is peaceful and surrounded by flowers and nice smells. It's great for a calm afternoon with friends or a sweet date in a relaxing garden setting.

13

Q13

Have a picnic by a flowing river, sitting on soft grass. You can relax while listening to the water, watch boats pass by, and enjoy the lovely view. It's perfect for a calm picnic in nature.

14

Q14

Try something different with a picnic on a rooftop. Enjoy amazing views of the city, feel the cool wind, and have a special meal. It's great for a romantic night or celebrating a special event under the stars.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below.

List of Headings:

A) For adventurous skiers
B) Especially good in autumn
C) For the rich and lazy
D) Not just for gamblers
E) Like an island in heaven
F) Film-makers like it
G) Looking down from up there
H) Probably the best one of five

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

CANADA'S MUST-VISIT TOURIST DESTINATIONS

1. If you go to the Insular Mountain Range of Vancouver Island and face the open Pacific Ocean, be ready to experience the magnificent natural and cultural heritage ot Canada's west coast. If you decide to go deeper into the island, you will find a lush coastal rainforest that gives way to bountiful and diverse intertidal and subtidal areas. And to top it all off, there are breathtaking beaches that make this an island paradise.

2. The resort town of Whistler is about a two-hour drive from Vancouver. Whistler offers visitors fine food and spas, but mostly it is popular among tourists for the opportunities it offers for adventure. Whistler and Blackcomb Mountains make Whistler one of the best destinations in the world for firstclass skiing. The passage between the two mountains creates a unique terrain one mile above the village, providing a year-round skiable territory.

3. A prized national treasure, Banff National Park is one of five national parks in the Canadian Rocky Mountains. It attracts millions of visitors each year for camping, hiking, biking, skiing, fishing or just relaxing. A full range of accommodation, restaurants and shops can be found in the resort. Two of the most famous and historic Canadian hotels, the Fairmont Banff Springs and the Chateau Lake Louise, are located in these towns as well.

4. Niagara Falls is maybe the most famous in the world, attracting millions of tourists each year. However, it has a certain reputation for being partly a small-scale Las Vegas and a theme park, because in addition to Niagara Falls the tourists can visit a casino resort with fine hotels and restaurants. Although this area is improving very quickly and everyone can easily find what they like, the Niagara region as a whole is worth deeper exploration.

5. Tourists are naturally drawn to tall buildings where they can get a bird's eye view of a city. The CN tower, located in downtown Toronto, is the tallest free standing structure in the world. Unfortunately, elevated observation usually comes at an equally elevated price, and the CN Tower is no different. However, tourists love it and the glass elevator takes them to the glassfloored outdoor observation deck which is a real thrill for both kids and grownups.

6. The 300 km long Cabot Trail is famous for its panorama views of the Atlantic Ocean. The trail is especially popular in the fall when the views are the most spectacular. Even though the drive into this area usually takes a few hours, once there, tourists can spend a day or two stopping in at one or two of the towns along the trail, relaxing and enjoying the magnificent nature all around.

PART 4

Questions 21–29

Read the following text for questions 21-29.

EMILY

Emily woke up before her alarm went off and knew instantly something wasn't quite right in the house. Bailey, her chocolate-coloured pet Labrador, should have been there at the bedroom door demanding food but there was no sound of him. She decided to get up and go and see where he was. It felt cold in the hall but she knew she had left the heating on last night. As she walked down the stairs she heard a noise in the kitchen; the strange feeling that something was wrong was getting stronger. What was going on? She got to the bottom of the stairs and opened the door to the living room, which led to the kitchen. Why was the door closed? She always left it open. Bailey was nowhere to be seen and his toys, which were usually all over the living room floor, were in a neat pile in the corner next to his basket. Had they been there when she had gone to bed last night? She couldn't remember. She walked into the kitchen and turned the light on, it didn't work, nothing happened. She stood very still and listened, nothing. There wasn't a sound. That was really strange; she lived in the middle of a busy city, there were always people around. She woke up to the sound of traffic, car horns, police cars, her neighbours shouting in the house next door, how could there be silence at 8 o'clock on a Friday morning? She went back into the living room and turned the TV on, but again nothing happened. She went back into the kitchen and looked out of the window; it was a bright clear day. The back door was shut but when she tried the handle she realised it was unlocked. She walked out into the tiny back garden and opened the back gate; still nothing, not a sound and no sign of Bailey. She called him but he didn't come. She went back into the house and what she realised she should have done as soon as she got up and called her mother. But there was no answer. She called her boyfriend but his mobile was switched off and she got the answer phone message. She tried a couple of other numbers but with equal success. She sat down on the sofa and thought about what she could do. She couldn't decide if she should stay at home or go out and find someone. Just as she decided the

best thing would be to stay at home and wait, there was a loud banging on the front door. She jumped up and ran to the door. "Who is it?" she shouted through the door. "It's me," came the reply. But she had no idea who "me" was. She didn't want to open the door until she was sure she knew who it was, not with all the other strange things that were happening this morning, and she didn't want to shout through the thick front door, so she walked back into the living room and tried to look through the front window to see who was standing at the front door. It was a man but she couldn't make out who he was; he didn't look familiar. He was tall and was wearing a big coat with a hood over his head. Just as she was thinking of running out the back door she saw that the man had Bailey with him, and Bailey seemed quite happy, which meant that the man had to be someone he knew and liked; he would have been barking otherwise. She still wasn't taking any chances though; she put the safety latch on the door and opened it just enough to see who was there. She was instantly relieved; it was her brother, who lived just a few streets away. She opened the door all the way and let him in. As he walked through the door he was almost knocked over by Bailey jumping up and looking more pleased than ever to see her. "So what's going on?" she asked her brother. He looked at her as if she was stupid. "Haven't you heard?"

Choose the correct answer A, B, C, or D.

21 What was the first thing Emily noticed that made her feel something was wrong that morning?

A) The living room door was wide open
B) Bailey wasn't waiting outside her room asking for food
C) She heard loud music coming from the kitchen
D) The heating system wasn't working

22 Which part of the story shows that Emily was shocked by how quiet everything was?

A) She lives in a quiet place in the countryside
B) She expected it to be noisier since it was a busy Friday morning
C) That time of day is always quiet with no people or cars
D) She got up much earlier than she usually does

23 How did Emily realize that the power might be out?

A) She tried to turn on the heat but it didn't work
B) The kitchen lights wouldn't come on
C) She switched on the TV but only saw static
D) The home phone had no signal

24 What made Emily finally open the front door?

A) She clearly heard her brother calling her
B) She saw that Bailey was calmly standing beside the man
C) The man outside said he would break the door
D) She remembered someone was supposed to visit

Decide if the following statements agree with the information given in the text.

25 Emily finds Bailey's toys lying scattered around the living room floor.

A) True
B) False
C) Not Given

26 Emily attempts several phone calls but cannot get through to anyone.

A) True
B) False
C) Not Given

27 The text states that Emily's mother left her a message on the voicemail.

A) True
B) False
C) Not Given

28 The stranger at the door turns out to be Emily's brother.

A) True
B) False
C) Not Given

29 Emily had locked the back door before going to bed.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

MIGRATORY LIFESTYLE

Out of a world population of 7.5 billion, around 30 million people currently lead a migratory lifestyle. Every continent has nomadic groups, leading a life very different from the sedentary communities they come into contact with. Almost all migratory communities are in steady decline for a wide range of reasons: climate change, political unrest, forced resettlement and armed conflict have all impacted on these traditional communities, diminishing their numbers year on year. However, the lure of the travelling lifestyle is as strong as ever. The 'gypsy lifestyle' continues to inspire people - especially the young - who crave the freedom of unstructured movement. Backpacking has become almost a rite of passage for the young. 'Gap years' between school and university often stretch to two years, or even more, as young people become addicted to the culture of travelling light and moving on.

Traditional nomads may be seen as 'wanderers', but their movement is not as unstructured as it may appear. Most nomadic communities are, or were, herdsmen, leading their animals across fixed routes based on pastures. Their societies were based on strong bonds of kinship. According to 14th-century social historian Ibn Khaldun, the Bedouin community owed their success in battle to osobiyyo or 'group feeling', which enhanced their ability to protect the group from outsiders. This, along with excellent horsemanship and the rigours of a harsh lifestyle, based around constant alertness needed to protect livestock, made them formidable adversaries in war when compared to their more settled counterparts.

Far from the desert-dwelling Bedouin live a different kind of nomad: the Moken, or sea gypsies, of the Mergui Archipelago between Myanmar and the islands of Thailand's North Andaman coast. During the dry season, they live on traditional houseboats, and during the monsoon season they build temporary villages on sheltered stretches of beach. Theirs is a culture of sharing and giving, to the extent that their language contains no words for individual possessions. These indigenous people have a great understanding of and respect for their environment, making use of over 80 plant species for food and more than 100 for shelter, handicrafts and other purposes. However, the Moken's lifestyle has more recently been affected by government restrictions on their hunter-gathering activities, and legal disputes over ownership of their traditional lands.

Somewhat inevitably, they have become a focus for tourism in the area, which they have embraced to some extent as they try to adapt to the modern world. Nomadic communities exist in Europe too. In the tundras and taigas of northern Scandinavia live a reindeer-herding community, the Sami. Originally travelling freely across the areas which now belong to Norway, Sweden, Finland and Russia, this subculture has had its traditional lifestyle curtailed by the creation of national borders.

, fill in the missing information in the numbered spaces.

MIGRATORY LIFESTYLE - SUMMARY

Migratory lifestyles **30**_____ the youth who are eager to have unplanned travel. Nomadic herders tend to choose their way taking **31**_____ into account. The Bedouin community had to be cautious all the time to **32**_____ their farm animals. The Moken have no words for **33**_____ property.

Choose the correct answer A, B, C, or D.

34 **According to the passage, the Moken ...**

A) hardly share their own possessions
B) live on the sea during the rainy season
C) changed their lifestyle because of restrictions
D) escaped to become accustomed to the modern world

35 **What is the writer's purpose in the reading passage?**

A) to explain the future of backpacking culture
B) to compare the success of different nomadic groups
C) to criticize the lack of tolerance for travelling communities
D) to highlight the current state of traditional travelling cultures

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

A WALK IN THE FOREST

A boy named Tom went for his usual walk in the forest near his house. He enjoyed spending time in nature because it helped him relax and forget about school stress. There was a narrow path in the **Q1**_____ that he often followed. The path was quiet and peaceful, and Tom liked liked listening to the sounds of birds and the wind in the trees. One afternoon, while he was walking along the **Q2**_____, he suddenly heard a strange noise coming from the bushes. At first, he felt a little nervous, but he was also curious. He walked towards the direction of the **Q3**_____ As he got closer, he noticed something moving under the leaves. When he looked more carefully, he saw a small bird on the ground. The **Q4** _____ seemed weak, and a bird's wing was injured. It could not fly away. Tom felt sorry for the poor animal and decided to help it. He gently picked up the bird and carried it home to heal its **Q5**_____ At home, Tom did not know what to do. He did not want to make the situation worse. Therefore, he decided to ask his biology teacher for advice. He called his **Q6**_____ and explained what had happened in the forest. The teacher told him how to take care of the bird and suggested taking it to a local animal clinic if the wing did not improve. Tom was proud of himself for helping the injured bird. It was a simple walk in the forest, but it became a meaningful experience for him.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. A) You need to learn the language for your job. B) You would like to continue your studies in another country. C) You want to learn the language and do interesting things in your free time. D) You want to learn the language in London. E) You want to have a higher education in England. F) You want to learn the language next summer. G) You need a free place to stay while studying. H) You would like to learn more than one language. I) You need to take an exam, finishing the course. J) You want to meet people from local companies during the course. 7. Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below.

List of Headings:

A) Comparing insects
B) Some special features
C) Some dragonflies migrate
D) Excellent vision
E) Keeping them warm or cool
F) Masters of flight
G) Ancient insects
H) Risks of extinction

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

THE FASCINATING WORLD OF DRAGONFLIES

1. Long before the dinosaurs walked the Earth, dragonflies took to the air. If we could transport ourselves back 250 million years, we would immediately recognize the familiar sight of dragonflies flying in pursuit of prey. Ancient dragonflies may have been considerably larger than those we see today. A fossilized impression of a dragonfly wing, found in a coal mine in England, is the oldest known dragonfly specimen. This dragonfly lived 320 million years ago and had a wingspan of 8 inches.

2. Relative to other insects, dragonfly vision is extraordinarily good. The head consists almost entirely of two huge compound eyes, which gives the dragonfly nearly 360° vision. Each compound eye contains as many as 30,000 lenses, or ommatidia. A dragonfly uses about 80% of its brain to process all this visual information. They can see a wider spectrum of colours than humans. This remarkable vision helps them to detect the movement of other insects and avoid collisions in flight.

3. Dragonflies can move each of their four wings independently. In addition to flapping each wing up and down, they can rotate their wings forward and back on"an axis. This flexibility enables them to put on an aerial show like no other insect. Dragonflies can move straight up or down, fly backwards, stop and hover, and make hairpin turns, at full speed or in slow motion. A dragonfly can fly forward at a speed of 100 body lengths per second, or up to 30 miles per hour.

4. A number of dragonfly species are known to migrate. As with other organisms that migrate, dragonflies relocate to follow or find needed resources, or in response to environmental changes like cold weather. The globe skimmer is one of several species known to develop in temporary freshwater pools. Forced to follow the rains that replenish their breeding sites, the globe skimmer set a new insect world record when a biologist documented its 11,000 mile trip between India and Africa.

5. Fifty years ago there were twice as many ponds in Britain as there are today. The draining of agricultural land, "filling in and pollution have all contributed to the disappearance of most countryside ponds. Canals have also suffered from pollution, especially by chemicals used on farmland draining into water. The loss of suitable fresh water habitats has affected dragonflies enormously and they are becoming increasingly rare. Some of dragonflies which can be found living only in the Norfolk Broads, is on the list of British endangered species of insects.

6. A dragonfly has two large compound eyes which take up most of its head. Dragonflies have long, delicate, membranous wings which are transparent and some have light yellow colouring near the tips. Their bodies are long and slender and they have short antennae. Dragonflies are very colourful. Some are red like the Comet Darner and yellow like the Emerald Darner. They can beat each pairs of wings together or separately and their rear wings can be out of phase with the front wings. Their wing beat is around 50-90 beats per second.

PART 4

Questions 21–29

Read the following text for questions 21-29.

MEDITATION AND HORMONES

In recent years, meditation has gained worldwide popularity, not only as a spiritual or mindfulness practice but also as a scientifically supported method of enhancing physical and mental health. Among the most fascinating discoveries about meditation is its impact on the body's hormonal system. Hormones play a crucial role in regulating mood, energy, sleep, and stress. Studies have shown that regular meditation can lead to significant hormonal changes, contributing to overall well-being and emotional balance.

One of the primary hormones influenced by meditation is cortisol, commonly known as the "stress hormone". Cortisol is released by the adrenal glands in response to physical or psychological stress. While short-term cortisol release is helpful in dangerous situations, chronic stress and high cortisol levels can lead to anxiety, insomnia, weight gain, and weakened immunity. Several clinical trials have demonstrated that individuals who practice mindfulness meditation experience notably lower cortisol levels, leading to reduced stress and improved emotional resilience.

In addition to reducing stress hormones, meditation also helps increase the levels of serotonin, a neurotransmitter that contributes to feelings of happiness and well-being. Low serotonin levels are associated with depression, mood swings, and fatigue. Meditation practices such as focused breathing, mantra repetition, or body scanning stimulate parts of the brain responsible for serotonin production. This natural boost in serotonin helps create a more positive mood and may even

reduce the need for certain medications in mild cases of depression.

Another hormone positively affected by meditation is melatonin, which regulates the sleep-wake cycle. Practicing meditation before bedtime has been shown to increase melatonin production, leading to improved sleep quality and deeper rest. Better sleep, in turn, supports hormone regulation, mental clarity, and physical health. Some meditation techniques, such as yoga nidra or guided relaxation, are specifically designed to prepare the body for restful sleep by calming the nervous system.

Meditation may also influence the release of dopamine, often referred to as the "reward chemical." Dopamine is linked to motivation, attention, and feelings of pleasure. Research using brain imaging has revealed that meditation can stimulate dopamine pathways, resulting in heightened focus and a sense of satisfaction. This might explain why experienced meditators often report a feeling of mental sharpness and joy during and after practice.

While the immediate effects of meditation on hormones can vary between individuals, long-term practice appears to lead to more stable and balanced hormone levels. This hormonal stability is believed to contribute to lower blood pressure, improved digestion, enhanced immune response, and a reduction in symptoms of chronic illnesses. Experts emphasize, however, that meditation should not replace medical treatment, but rather be used as a complementary practice within a holistic health approach.

Choose the correct answer A, B, C, or D.

21 What new discovery made scientists more interested in studying meditation?

A) It helps make bones stronger
B) It clearly affects the body's hormone system
C) It can take the place of exercise for the heart
D) It can quickly cure serious illnesses

22 Which hormone goes down when people often do mindfulness meditation?

A) Dopamine
B) Melatonin
C) Cortisol
D) Serotonin

23 Which chemical that affects mood goes up with breathing exercises and repeating mantras?

A) Insulin
B) Serotonin
C) Adrenaline
D) Progesterone

24 Why do some people meditate at night before going to sleep?

A) It increases melatonin and helps them sleep better
B) It gives more energy by raising dopamine levels
C) It completely stops cortisol for a whole day
D) It cools the body more than anything else

Decide if the following statements agree with the information given in the text.

25 The text says that meditation can affect people's hormones differently right away — it's not the same for everyone.

A) True
B) False
C) Not Given

26 Meditating regularly for a long time can help reduce blood pressure.

A) True
B) False
C) Not Given

27 The passage says that better hormone balance from meditation might also help with digestion.

A) True
B) False
C) Not Given

28 The passage explains that keeping hormone levels balanced through meditation over time can make the immune system stronger.

A) True
B) False
C) Not Given

29 The text says that experts do not recommend using only meditation instead of regular medical treatment for serious health problems.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE MYSTERIOUS ORIGINS OF EARTH'S WATER

Despite the fact that water covers over 70% of the Earth's surface, scientists are still debating where it originally came from. Our planet is home to vast oceans, icy glaciers, rivers, and atmospheric vapor, yet the origins of this essential substance remain one of the biggest puzzles in planetary science. Did Earth always have water, or did it arrive later— possibly from outer space?

One leading theory suggests that water was delivered to Earth during the early stages of its formation by icy comets and asteroids. These space objects, composed largely of rock and frozen gases, may have collided with Earth approximately 4 billion years ago, depositing ice that later melted into liquid water. Isotopic analysis of water found in meteorites has revealed similarities to water found in Earth's oceans, supporting this theory. However, the exact ratio of hydrogen isotopes doesn't perfectly match, which has led to ongoing scientific debate.

Another possibility is that water emerged from volcanic activity deep within the planet. In this scenario, as Earth cooled and its crust began to form, volcanoes released large amounts of gases, including water vapor, into the early atmosphere. Over time, the vapor condensed and fell back to Earth as rain, gradually filling basins to create ancient oceans. This theory highlights how

Earth's volcanic past may have played a more direct role in shaping its climate and water systems.

Interestingly, both theories might be partially true. A growing number of scientists now believe that Earth's water may have multiple sources—some originating from within the planet and some arriving from space. This dualorigin theory could explain why Earth's water has both volatile (easily vaporized) and non-volatile components, and why its chemical signature is so complex.

Water on Earth exists in all three states of matter: solid, liquid, and gas. The icy poles and glaciers act as massive freshwater reserves. The oceans regulate the planet's temperature and are home to most of its biodiversity. Meanwhile, water vapor in the atmosphere plays a key role in weather patterns and the greenhouse effect. The Earth's unique ability to maintain water in all its forms is closely linked to its distance from the sun and the stability of its climate.

Modern space missions are also seeking answers beyond our planet. Instruments on spacecraft such as the European Space Agency's Rosetta and NASA's OSIRIS-REx are analyzing the composition of comets and asteroids to better understand their potential role in Earth's water supply. Meanwhile, volcanic activity on moons like Enceladus (Saturn) and Io (Jupiter) shows that icy and volcanic processes may not be unique to Earth, hinting at the possibility of water—and perhaps even life—elsewhere in the solar system.

, fill in the missing information in the numbered spaces.

THE MYSTERIOUS ORIGINS OF EARTH'S WATER - SUMMARY

According to one idea, Earth's water may have come from frozen space objects such as comets and **30**_____. One problem with the theory that water came from space is that the hydrogen **31**_____ in Earth's water doesn't exactly match the hydrogen in meteorites. According to the volcanic theory, water vapor released by eruptions eventually fell as **32**_____. The fact that Earth supports water in all physical states is partly due to its stable **33**_____.

Choose the correct answer A, B, C, or D.

34 Why do some scientists support a dual-origin theory of Earth's water?

A) Because volcanic eruptions alone could not create enough water
B) Because both internal and external sources explain water's complexity
C) Because all hydrogen isotopes match perfectly with meteorites
D) Because water from Earth's core evaporates too easily

35 What is the writer's main purpose in the passage?

A) To highlight the impact of water on Earth's biodiversity
B) To describe the role of space missions in planetary science
C) To examine and compare different theories about Earth's water origins
D) To explain how Earth's climate makes life possible

UZBEKISTAN'S NEW U.S. VISA INITIATIVE

The government of Uzbekistan plans to make it easier for its citizens to get U.S. visas. This is part of a new initiative to grow tourism in Uzbekistan. The **Q1**_____ was signed by President Shavkat Mirziyoyev on May 15. As part of this, the Ministry of Foreign Affairs will work on creating a visa-free system for U.S. citizens. This means citizens of US could stay in Uzbekistan for up to 30 days in a three-month period without needing a **Q2**_____. At the same time, the ministry will try to make it easier for Uzbek **Q3**_____ to get U.S. visas. Uzbekistan will also change the entry rules for citizens of Russia, Kazakhstan, and Azerbaijan. People from these countries will be able to enter Uzbekistan for up to 30 **Q4**_____ using just their ID cards or special documents for children. Many Uzbek people apply for and win the U.S. Green Card lottery each year. Over 5,000 Uzbeks get permanent residency in the United States this way. However, many others try to enter and live in the U.S. illegally, often through dangerous journeys from Mexico. Uzbekistan is one of the **Q5**_____ with the most people doing this. The U.S. government has said it wants to send back many people who live there **Q6**_____. During the first months of the year, over 100,000 people were deported.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) Your dog isn't fit. It needs to eat something that is healthy.

B) Your brother wants to communicate with his new friends in Barcelona and doesn't know how to speak to them.

C) Your kind cousin knows little English and wants to earn some money during the summer.

D) You are worried that you're gaining weight. You want to attend something that makes you lose fat.

E) Your neighbor is fed up with walking to the work. He wants something cheap and dependable.

F) Your parents want to buy a vehicle that is new and fast. They will need a full-service.

G) Your friend wants to do something that is good for his health. He works all week but is free in the evenings.

H) You want to take your family somewhere for fun and shopping this weekend.

I) You want to enroll your daughter in a melodic and engaging class.

J) You want to take your non-speaking friend somewhere.

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Disorders strike much later in life.
B) Drawbacks in public health.
C) Longevity based on high education.
D) The elderly people of today got better nutrition when they were children.
E) The elderly are becoming more well off.
F) Most of independent people over 65 complete activities themselves.
G) Diseases have decreased recently.
H) The potential outbreaks in the U.S.

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

GROWING OF THE AGING SOCIETY

I. Over the last 14 years, The National Long-term Health Care Survey has gathered data from more than 20,000 males and females over the age of 65 about their health and lifestyles. The group has analysed the results of data gathered in 1994 on conditions such as arthritis, high blood pressure and poor circulation; these were the most common medical complaints for this age group. The results show that these conditions are troubling a smaller proportion of people each year and decreasing very quickly. Other diseases suffered by the elderly including dementia, emphysema and arteriosclerosis are also affecting fewer people.

II. According to Kenneth Manton, a demographer from Duke University in North Carolina, 'the question of what should be considered normal ageing has really changed.' He also mentioned that diseases suffered by many people around the age of 65 in 1982 are now not occurring until people reach the age of 70-75.

III. It is clear that due to medical advances some diseases are not as prominent as they used to be. However, there was also be other factors influencing this change. For instance, improvements in childhood nutrition in the first quarter of the twentieth century gave many people a better start in life than was possible before.

IV. The data also shows some negative changes in public health. The research suggests that the rise of respiratory conditions such as lung cancer and bronchitis may reflect changing smoking habits and an increase in air pollution. Manton says that as we have been exposed to worse and worse pollution, it is not surprising that some people over the age of 60 are suffering as a result.

V. Manton also found that better-educated people are likely to live longer. For instance, women of 65 with less than eight years of education are expected to live to around 82. Those who studied more could be able to live seven years longer. Whilst some of this can be attributed to better-educated people usually having a higher income, Manton believes it is mainly because they pay closer attention to their health.

VI. Also, the survey estimated how independent people of 65 were and found a striking trend. In the 1994 survey, almost 80% of them were able to complete activities such as eating and dressing alone as well as handling difficult tasks, like cooking and managing their financial affairs. This situation indicates an important drop among disabled elderly people in the population. If 14 years ago, the apparent trends in the US had continued, researchers believe that there would be one million disabled elderly people in today's population. Manton shows the trend saved more than $200 billion for the US's governments Medicare system, and it has suggested the elderly American population is less of a financial burden than expected.

PART 4

Questions 21–29

Read the following text for questions 21-29.

THE WILD SIDE OF TOWN

The countryside is no longer the place to see wildlife, according to Chris Barnes. These days you are more likely to find impressive numbers of skylarks, dragonflies and toads in your own back garden.

The past half century has seen an interesting reversal in the fortunes of much of Britain's wildlife. Whilst the rural countryside has become poorer and poorer, wildlife habitat in towns has burgeoned. Now, if you want to hear a deafening dawn chorus of birds or familiarise yourself with foxes, you can head for the urban forest. Whilst species that depend on wide open spaces such as the hare, the eagle and the red deer may still be restricted to remote rural landscapes, many of our wild plants and animals find the urban ecosystem ideal. This really should be no surprise, since it is the fragmentation and agrochemical pollution in the farming lowlands that has led to the catastrophic decline of so many species.

By contrast, most urban open spaces have escaped the worst of the pesticide revolution, and they are an intimate mosaic of interconnected habitats. Over the years, the cutting down of hedgerows on farmland has contributed to habitat isolation and species loss. In towns, the tangle of canals, railway embankments, road verges and boundary hedges lace the

landscape together, providing first-class ecological corridors for species such as hedgehogs, kingfishers and dragonflies.

Urban parks and formal recreation grounds are valuable for some species, and many of them are increasingly managed with wildlife in mind. But in many places, their significance is eclipsed by the huge legacy of post-industrial land — demolished factories, waste tips, quarries, redundant railway yards and other so-called 'brownfield' sites. In Merseyside, South Yorkshire and the West Midlands, much of this has been spectacularly colonised with birch and willow woodland, herb-rich grassland and shallow wetlands. As a consequence, there are song birds and predators in abundance over these once-industrial landscapes.

There are fifteen million domestic gardens in the UK, and whilst some are still managed as lifeless chemical war zones, most benefit the local wildlife, either through benign neglect or positive encouragement. Those that do best tend to be woodland species, and the garden lawns and flower borders, climber-covered fences, shrubberies and fruit trees are a plausible alternative. Indeed, in some respects, gardens are rather better than the real thing, especially with exotic flowers extending the nectar season. Birdfeeders can also supplement the natural seed supply, and only the millions of domestic cats may spoil the scene. As Britain's gardeners have embraced the idea of 'gardening with nature', wildlife's response has been spectacular. Between 1990 and the year 2000, the number of different bird species seen at artificial feeders in gardens increased from 17 to an amazing 81. The BUGS project (Biodiversity in Urban Gardens in Sheffield) calculates that there are 25,000 garden ponds and 100,000 nest boxes in that one city alone.

We are at last acknowledging that the wildlife habitat in towns provides a valuable life support system. The canopy of the urban forest is filtering air pollution, and intercepting rainstorms, allowing the water to drip more gradually to the ground. Sustainable urban drainage relies on ponds and wetlands to contain storm water runoff, thus reducing the risk of flooding, whilst reed beds and other wetland wildlife communities also help to clean up the water. We now have scientific proof that contact with wildlife close to home can help to reduce stress and anger. Hospital patients with a view of natural green space make a more rapid recovery and suffer less pain.

Traditionally, nature conservation in the UK has been seen as marginal and largely rural. Now we are beginning to place it at the heart of urban environmental and economic policy. There are now dozens of schemes to create new habitats and restore old ones in and around our big cities. Biodiversity is big in parts of London, thanks to schemes such as the London Wetland Centre in the south west of the city.

This is a unique scheme masterminded by the Wildfowl and Wetlands Trust to create a wildlife reserve out of a redundant Victorian reservoir. Within five years of its creation, the Centre has been hailed as one of the top sites for nature in England and made a Site of Special Scientific Interest. It consists of a 105-acre wetland site, which is made up of different wetland habitats of shallow, open water and grazing marsh. The site attracts more than 104 species of bird, including nationally important rarities like the bittern.

We need to remember that if we work with wildlife, then wildlife will work for us — and this is the very essence of sustainable development.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 Which type of wildlife benefits most from urban gardens?

A) wild plants
B) exotic flowers
C) wetland birds
D) woodland species

22 What type of garden plants can benefit birds and insects?

A) exotic flowers
B) shrubberies
C) reeds
D) fruit trees

23 In which way can wildlife habitats benefit people living in urban areas?

A) They can make the cities greener.
B) They can improve the climate.
C) They can promote human well-being.
D) They can extend the flowering season.

24 The writer believes that sustainable development is dependent on

A) urban economic policy.
B) large restoration schemes.
C) active nature conservation.
D) government projects.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 There is now more wildlife in UK cities than in the countryside.

A) True
B) False
C) Not Given

26 Rural wildlife has been reduced by the use of pesticides on farms.

A) True
B) False
C) Not Given

27 In the past, hedges on farms used to link up different habitats.

A) True
B) False
C) Not Given

28 New urban environments are planned to provide ecological corridors for wildlife.

A) True
B) False
C) Not Given

29 Public parks and gardens are being expanded to encourage wildlife.

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

LOCKED DOORS OPEN ACCESS

The word 'security' has both positive and negative connotations. Most of us would say that we crave security for all its positive virtues, both physical and psychological — its evocation of the safety of home, of undying love, or of freedom from need. More negatively, the word nowadays conjures up images of that huge industry that has developed to protect individuals and property from invasion by 'outsiders', ostensibly malicious and intent on theft or wilful damage.

Increasingly, because they are situated in urban areas of escalating crime, those buildings which used to allow free access to employees and other users (buildings such as offices, schools, colleges, or hospitals) now do not. Entry areas which in another age were called 'Reception' are now manned by security staff. Receptionists, whose task it was to receive visitors and to make them welcome before passing them on to the person they had come to see, have been replaced by those whose task it is to bar entry to the unauthorized, the unwanted or the plain unappealing.

Inside, these buildings are divided into 'secure zones' which often have all the trappings of combination locks and burglar alarms. These devices bar entry to the uninitiated, hinder circulation and create parameters of time and space for user access. Within the spaces created by these zones, individual rooms are themselves under lock and key, which is a particular problem when it means that working space becomes compartmentalized.

To combat the consequent difficulty of access to people at a physical level, we have now developed technological access. Computers sit on every desk and are linked to one another, and in many cases to an external universe of other computers so that messages can be passed to and fro. Here too, security plays a part, since we must not be allowed access to messages destined for others. And so the password was invented. Now correspondence between individuals goes from desk to desk and cannot be accessed by colleagues. Library catalogues can be searched from one's desk. Papers can be delivered to, and received from, other people at the press of a button.

And yet it seems that, just as work is isolating individuals more and more, organizations are recognizing the advantages of 'team-work'; perhaps in order to encourage employees to talk to one another again. Yet, how can groups work in teams if the possibilities for communication are reduced? How can they work together if e-mail provides a convenient electronic shield behind which the blurring of public and private can be exploited by the less scrupulous? If voice-mail walls up messages behind a password? If I can't leave a message on my colleague's desk because his office is locked? Team-work conceals the fact that another kind of security, 'job security', is almost always not on offer. Just as organizations now recognize three kinds of physical resources: those they buy, those they lease long-term, and those they rent short-term — so it is with their human resources. Some employees have permanent contracts, some have short-term contracts, and some are regarded simply as casual labour.

Telecommunication systems offer us the direct line, which means that individuals can be contacted without the caller having to talk to anyone else. Voice-mail and the answer-phone mean that individuals can communicate without ever actually talking to one another. If we are unfortunate enough to contact organizations with sophisticated touch-tone systems, we can buy things and pay for them without ever speaking to a human being.

To combat this closing in on ourselves we have the Internet, which opens out communication channels more widely than anyone could possibly want or need. An individual's electronic presence on the Internet is known as a 'Home Page' — suggesting the safety and security of an electronic hearth. An elaborate system of 3-dimensional graphics distinguishes this very 2-dimensional medium of 'web sites'. The nomenclature itself creates the illusion of a geographical entity, that the person sitting before the computer is travelling, when in fact the 'site' is coming to him. 'Addresses' of one kind or another move to the individual, rather than the individual moving between them, now that location is no longer geographical.

An example of this is the mobile phone. I am now not available either at home or at work, but wherever I take my mobile phone. Yet, even now, we cannot escape the security of wanting to 'locate' the person at the other end. It is no coincidence that almost everyone we see answering or initiating a mobile phone-call in public begins by saying where he or she is.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

The problem of physical access to buildings has now been **30**_____ by technology.

Messages are sent between **31**_____, with passwords not allowing other **32**_____ to read someone else's messages.

But, while individuals are becoming increasingly cut-off socially by the way they do their job, at the same time more value is being put on team **33**_____.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **According to the author, one thing we long for is ...**

A) the safety of the home
B) security
C) open access
D) positive virtues

35 **Buildings used to permit access to any users ...**

A) but now they do not
B) and still do now
C) especially offices and schools
D) especially in urban areas

PART 1 — Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE CLEVER FOX AND THE PROUD WOLF

In a deep forest, a clever fox and a proud wolf lived as neighbors. The **Q1**_____ fox was small but quick, while the proud wolf was strong. One winter, the forest became quite cold. The wolf growled, "I am **Q2**_____! I will take what I need." He stormed toward a nearby farm. The clever fox shook his head. "Strength alone is not enough. Watch and learn." The proud wolf didn't **Q3**_____ and leaped over the fence. But before he could steal a hen, the farmer's dogs attacked. The proud wolf barely escaped, limping back into the trees. The clever fox waited until nightfall. He crept to the farm and dug a small hole under the wall to get eggs. One by one, he got **Q4**_____, leaving no trace. The next morning, the proud wolf groaned, "How did you escape farmer's **Q5**_____?" The clever fox smiled. "Wisdom finds a way where strength fails." From that day, the **Q6**_____ wolf listened more and boasted less, and the clever fox had a friend who valued more than just power.

PART 2 — Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) Bill is a fan of cutting-edge technology, especially artificial intelligence. He needs a phone that is smarter than the devices on the market today.

B) Jack is a gamer. He needs a powerful and durable phone with the best quality speaker.

C) Arthur needs a phone with the brightest and best quality screen.

D) Sean travels a lot. He needs something both powerful and strong.

E) Dutch likes to save money. He wants a quality and powerful device that is worth the money.

F) Lenny works at the office. He needs a phone with retro design.

G) Xavier doesn't like to be tied down to a charger. He needs a device that can charge for a shorter period of time and last a long time.

H) Abigail travels a lot and takes pictures of many places. She needs a camera that is large in size.

I) Mary needs a device with a GPS and lots AI-enhanced photo editors.

J) Jon needs a device that is powerful in all aspects with durable battery.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) To change the situation with foreign languages
B) Eating at school
C) Keeping fit at school
D) A break to stop and look around
E) Accepting foreign students to British schools
F) Gadgets in British schools
G) The enjoyable school event
H) To make them behave well

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

SCHOOLS IN UK

I. All students in the UK have to do PE or Physical Education at school until they are 16. The schools offer different activities. The most popular sport is football which is played by boys and girls. Students also play rugby, field hockey, and netball or do individual physical activities like athletics or gymnastics. Today, some schools also offer dance, fitness, or frisbee. The school sports facilities are always available to the students at lunchtime and after classes.

II. Unfortunately, this school subject is not very popular with British students. The British government is considering different ways to deal with this problem. One idea is to introduce foreign languages from the age of 5. Another plan is to give students more choice. The languages traditionally studied in British schools are French, Spanish and German. Now the government wants to include Arabic and Chinese in the school curriculum.

III. Mobile phones are permitted at school in the UK but students are not allowed to use them in class. School students can use their phones at break time. Teachers can take away phones if these rules are broken. However, according to some teachers, students don't always follow the rules. The lessons are sometimes disrupted when students send texts, receive calls, look at social networking sites or watch videos.

IV. School lunches are a hot topic in the UK these days. Some students have lunch at home or take a packed lunch to school but more than a third of British school pupils have lunch in the school canteen. There is usually a main course, a dessert and a drink. School dinners must include fruit and vegetables, protein (for example meat, fish or cheese) and carbohydrates (for example rice or pasta). Parents often pay for their children's food in advance online.

V. UK schools are allowed to discipline pupils who behave badly. The list of serious and not-so-serious types of bad behaviour may include: missing school without permission from parents, not doing homework, wearing unsuitable clothes for school, cheating in exams, bullying, etc. There are several ways students can be punished. Sometimes the student has to write a sentence, for example 'I must not shout in class', many times (for example, 100 times) on a sheet of paper.

VI. A school prom is a formal party to celebrate an important date such as the end of secondary school. The idea is to have fun with your school friends and celebrate your time and achievements at school. Proms are held in June or July, around the end of exam time or the end of term. A secondary school prom often involves a big party and nice dresses. Most schools arrange a special dinner in the school hall.

PART 4

Questions 21–29

Read the following text for questions 21-29.

GLOBAL SEA ICE HIT RECORD LOW IN FEBRUARY, SCIENTISTS SAY

Paragraph 1. Global sea ice fell to a record low in February, scientists have said, a symptom of an atmosphere fouled by planet-heating pollutants. The combined area of ice around the north and south poles hit a new daily minimum in early February and stayed below the previous record for the rest of the month, the EU's Copernicus Climate Change Service (C3S) said on Thursday. "One of the consequences of a warmer world is melting sea ice," said the C3S deputy director, Samantha Burgess. "The record or near-record low sea ice cover at both poles has pushed global sea ice cover to an all-time minimum."

Paragraph 2. The agency found the area of sea ice hit its lowest monthly level for February in the Arctic, at 8% below average, and its fourth-lowest monthly level for February in the Antarctic, at 26% below average. Its satellite observations stretch back to the late 1970s and its historical observations to the middle of the 20th century. Scientists had already observed an extreme heat anomaly in the north pole at the start of February, which caused temperatures to soar more than 20C above average and cross the threshold for ice to melt. They described the latest broken record as "particularly worrying" because ice reflects sunlight and cools the planet. "The lack of sea ice means darker ocean surfaces and the ability of the Earth to absorb more sunlight, which accelerates the warming," said Mika Rantanen, a climate scientist at the Finnish Meteorological Institute.

Paragraph 3. The strong winter warming event in the Arctic in early February had prevented sea ice from growing normally, he added. "I believe that this meteorological event, combined with the long-term decline of sea ice due to anthropogenic climate change, was the primary cause of the lowest Arctic Sea ice extent on record." Global sea ice extent varies throughout the year but typically reaches its annual minimum in February, when

it is summer in the southern hemisphere. C3S said February 2025 was the third hottest February it had seen. Global temperatures were 1.59C hotter than preindustrial levels, making it the 19th month in the past 20 that was more than 1.5C above preindustrial levels.

Paragraph 4. Earth observation programmes such as C3S rely on the reanalysis of billions of measurements from satellites, ships, aircraft and weather stations to create snapshots of the state of the climate. The agency cautioned that the margins above 1.5C were small in several months, and could differ slightly in other datasets. The broken sea ice record comes after last year was confirmed as the hottest year on record and a Guardian analysis of C3S data revealed that two-thirds of the world's surface was seared by record-breaking monthly heat in 2024. The El Niño weather pattern in the first half of the year added to the background heating effect of fossil fuel pollution, which traps sunlight.

Paragraph 5. El Niño has since subsided and morphed into a weak form of its cooler counterpart, La Niña. The World Meteorological Organization said on Thursday they expected the La Niña that emerged in December to be short-lived. Richard Allan, a climate scientist at the University of Reading, said the long-term prognosis for Arctic Sea ice was grim. "The region continues to rapidly heat up, and can only be saved with rapid and massive cuts to greenhouse gas emissions," he said. "That will also limit the growing severity of weather extremes and long-term sea level rise across the world."

Paragraph 6. The headline of this article was amended on 6 March 2025 to clarify that global sea ice cover in February fell to its lowest level on record. The use of the term "all-time minimum" in the earlier headline referred to the minimum temperature across all months — not just February — since the satellite record began, rather than the entirety of history.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 What's the main reason for global ice decline?
A) A symptom which is unknown to scientists.
B) Pollutants which heat the atmosphere.
C) Combined areas of ice.
D) Colder climate.

22 Ice helps the planet by ...
A) reducing pollutants.
B) making oceans darker.
C) increasing temperatures.
D) reflecting the light of the sun.

23 According to paragraph 3, during February in the southern hemisphere ...
A) ice reaches its minimum.
B) ice stops melting.
C) winter becomes warm.
D) sea freezes fast.

24 According to Richard Allan, which factor can save Arctic Sea ice meltdowns?
A) Limiting weather extremes.
B) Making cooler environment.
C) Reducing greenhouse emissions.
D) Trapping sunlight with the help of fossil fuels.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 According to Samantha Burgess, global warming is causing ice to melt fast.
A) True
B) False
C) Not Given

26 La Nina is much stronger than El Nino.
A) True
B) False
C) Not Given

27 According to Richard Allan, melting ice will lead to extreme heavy rains throughout the world.
A) True
B) False
C) Not Given

28 Guardian analysis states that humans will have to live without ice in the near future.
A) True
B) False
C) Not Given

29 Satellites show that melting ice is a permanent occurrence.
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE PEARL

The pearl has always had a special status in the rich and powerful all through history. For instance, women from ancient Rome went to bed with pearls on them, so that they could remind themselves how wealthy they were after waking up. Pearls used to have more commercial value than diamonds until jewellers learnt to cut gems. In the eastern countries like Persia, ground pearl powders could be used as a medicine to cure anything including heart diseases and epilepsy. Pearls can generally be divided into three categories: natural, cultured and imitation. When an irritant (such as a grain of sand) gets inside a certain type of oyster, mussel, or clam, the mollusc will secrete a fluid as a means of defence to coat the irritant. Gradually, layers are accumulated around the irritant until a lustrous natural pearl is formed.

Paragraph 1. A cultured pearl undergoes the same process. There is only one difference between cultured pearls and natural ones: in cultured pearls, the irritant is a head called 'mother of pearl' and is placed in the oyster through surgical implantation. This results in much larger cores in cultivated pearls than those in natural pearls. As long as there are enough layers of nacre (the secreted fluid covering the irritant) to create a gorgeous, gem-quality pearl, the size of the nucleus wouldn't make a difference to beauty or durability.

Paragraph 2. Pearls can come from both salt and freshwater sources. Typically, pearls from salt water usually have high quality, although several freshwater pearls are considered high in quality, too. In addition, freshwater pearls often have irregular

shapes, with a puffed rice appearance. Nevertheless, it is the individual merits that determine the pearl's value more than the sources of pearls. Saltwater pearl oysters are usually cultivated in protected lagoons or volcanic atolls, while most freshwater cultured pearls sold today come from China. There are a number of options for producing cultured pearls: use fresh water or sea water shells, transplant the graft into the mantle or into the gonad, add a spherical bead or do it nonbeaded.

Paragraph 3. No matter which method is used to get pearls, the process usually takes several years. Mussels must reach a mature age, which may take up almost three years, and then be transplanted an irritant. When the irritant is put in place, it takes approximately another three years for a pearl to reach its full size. Sometimes, the irritant may be rejected. As a result, the pearl may be seriously deformed, or the oyster may directly die from such numerous complications as diseases. At the end of a 5- to 10-year circle, only half of the oysters may have made it through. Among the pearls that are actually produced in the end, only about 5% of them will be high-quality enough for the jewellery makers.

Paragraph 4. Imitation pearls are of another different story. The Island of Mallorca in Spain is renowned for its imitation pearl industry. In most cases, a bead is dipped into a solution made from fish scales. But this coating is quite thin and often wears off. One way to distinguish the imitation pearls is to have a bite on it. Fake pearls glide through your teeth, while the layers of nacre on the real pearls feel gritty.

Paragraph 5. Several factors are taken into account to evaluate a pearl: size, shape, colour, the quality of surface and luster. Generally, the three types of pearls come in such order (with the value decreasing): natural pearls, cultured pearls and imitation pearls (which basically are worthless). For jewellers, one way to tell whether a pearl is natural or cultured is to send it to a gem lab and perform an X-ray on it. High-quality natural pearls are extremely rare. Japan's Akoya pearls are one of the glossiest pearls out there, while the south sea water of Australia is a cradle to bigger pearls.

Paragraph 6. Historically, the pearls with the highest quality around the globe are found in the Persian Gulf, particularly around Bahrain. These pearls have to be hand-harvested by divers with no advanced equipment. Unfortunately, when the large reserve of oil was discovered in the early 1930s, Persian Gulf's natural pearl industry came to a sudden end because the contaminated water destroyed the once pristine pearls. In the present days, India probably has the largest stock of natural pearls. However, it is quite an irony that a large part of India's stock of natural pearls are originally from Bahrain.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

In history, pearls have had great importance within the men of wealth and power, which were treated as gems for women in ancient **30** _____. Also, pearls were even used as a medicine for people in **31** _____. There are essentially three types of pearls: natural, cultured and imitation. Most freshwater cultured pearls sold today come from China while **32** _____ Island is famous for its imitation pearl industry. Good-quality natural pearls are exceedingly unusual. **33** _____ often manufactures some of the glitteriest pearls while Australia produces larger size ones due to the favorable environment along the coastline.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **What is the author talking about in paragraph 3?**

A) ancient stories around pearls and its customers
B) difficulties in cultivating process
C) factors which decide the value of natural pearls
D) a growth mechanism that distinguishes cultured pearls from natural ones

35 **What can be concluded from the passage?**

A) It's quite wrong to hunt pearls as it damages the ecosystem.
B) Some merits of pearls make them more valuable than others.
C) The quality of a pearl is determined only by its size.
D) Nowadays, the Persian Gulf pearl industry is increasing.

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

NEW ZEALAND WELCOMES DIGITAL NOMADS

There is good news for people who want to work in New Zealand. The country has relaxed its visa rules. It wants to attract "digital nomads" to live and work in the **Q1**_____ for up to nine months. A digital nomad is someone who can travel and live anywhere because they work online. New Zealand has a new visa that allows visitors to work remotely for a foreign employer for three months. This can be extended for up to nine **Q2**_____ However, someone staying for nine months may have to pay tax. Economic growth minister Nicola Willis hopes the new **Q3**_____ will help New Zealand's economy. She said: "We want more wealthy and super-talented people coming [through] the arrival gates."

New Zealand's **Q4**_____ has suffered in recent years. The Covid pandemic hurt the country's tourism industry. It has not yet recovered to pre-Covid levels. Another thing that is affecting the economy is the number of young people leaving New Zealand. Record numbers of **Q5**_____ in their twenties are going overseas to work. Immigration Minister Erica Stanford hoped the visitors with the new visa will spend more money. This will boost the economy. She said: "I expect in their time here, **Q6**_____ will spend longer than they normally would. They will spend more because they're here for longer. And the thing that we're really hoping for, is that they fall in love with the place."

18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

ROBOTS

I. The word 'robot' is a Czech word for a servant or slave. It was invented by a Czech writer Karel Capek in 1920. The word 'robotics' was first used by Isaac Asimov in 1937 in a story called Robby. The smallest robot in the world is the nano-bot. They are small enough to travel inside your blood vessels. One of the hardest things to make a robot do... is walk.

II. Aibo the dog, designed by Sony, can walk, talk and wag its tail. It can express emotions of happiness, sadness, surprise, fear and dislike. You can talk to it and it will respond. Aibo can read your e-mail and take pictures. You can programme Aibo to respond to a specific name. You can also change its software so that it becomes a puppy. You don't have to clean after it and its feeding is very cheap — just recharge its batteries.

III. If you are sick and tired of helping your parents around the house, then a new robot can be the answer. It has been designed to make people's lives easier. This yellow robot with bright eyes can do different jobs for you and help you remember things you have to do. It's so clever that when its batteries run out, the robot knows that it needs to recharge them and does it itself.

IV. Asimo is a humanoid robot. It has two legs, two arms and red lights for eyes. It can walk, talk, climb stairs and even dance. It can also recognize people's faces, gestures and voices. It took Honda's engineers 16 years to create Asimo. Today's model is 120 cm tall and weighs 43 kg. The robot is not for sale because its creators want it to become even more intelligent.

V. If you want to have a robot that can understand how you feel, then the creation of two US scientists will be of interest. They'd like their model to be sensitive to our moods and emotions. Their robot won't have emotions of its own but it should be able to respond to its owner's mood. So, if you feel sad, the robot will ask if it can help you. It's not an easy job because everyone shows emotions in quite different ways.

VI. A Japanese professor has invented an invisibility coat. A camera on the back of the person's head films the scene behind them and projects it onto the coat. The technology has practical applications: in the future doctors could see 'through' their hands or other obstacles when they are doing operations.

PART 4

Questions 21–29

Read the following text for questions 21-29.

SCIENTISTS AIMING TO BRING BACK WOOLLY MAMMOTH CREATE WOOLLY MICE

Scientists at the US biotechnology company Colossal Biosciences plan to "de-extinct" the prehistoric pachyderms by genetically modifying Asian elephants to give them woolly mammoth traits. They hope the first calf will be born by the end of 2028. Ben Lamm, co-founder and chief executive of Colossal, said the team had been studying ancient mammoth genomes and comparing them with those of Asian elephants to understand how they differ and had already begun genome-editing cells of the latter.

Now the team say they have fresh support for their approach after creating healthy, genetically modified mice that have traits geared towards cold tolerance, including woolly hair. "It does not accelerate anything but it's a massive validating point," Lamm said. In the research, which has not yet been peer-reviewed, the team used a number of genome editing techniques to either genetically modify fertilised mouse eggs or modify embryonic mouse stem cells and inject them into mouse embryos, before implanting them into surrogates. The team focused on disrupting nine genes associated with hair colour, texture, length or pattern or hair follicles. Most of these genes were selected because they were already known to influence the coats of mice, with the induced disruptions expected to produce physical traits similar to those seen in mammoths, such as golden hair.

However, two of the genes targeted in the mice were also found in mammoths, where they are thought to have contributed to a woolly coat, with the changes introduced by the researchers designed to make the mouse genes more mammoth-like. The team also disrupted a gene associated with the way fats are metabolised in mice and was also found in mammoths, which they suggest could play a role in cold adaptation. The researchers edited different combinations of these genes, with

one technique allowing them to make as many as eight edits in seven different genes at the same time.

While many of the experiments did not result in mouse pups, mice that were born had various combinations of distinctive hair types including woolly coats, long hair and golden-brown coats. However, they had a similar average body mass whether or not the gene relating to fat metabolism was modified. "The efficiency of the edits varied, but many individuals [were] 100% for all attempted edits," said Beth Shapiro, Colossal's chief science officer. Lamm said the team hoped to be able to carry out behavioural tests for cold tolerance in the coming months.

Robin Lovell-Badge, head of stem cell biology and developmental genetics at the Francis Crick Institute in London, who was not involved in the work, praised the technical aspects of the study.

But he said it did not unpick the mechanisms by which the genes produce different hair types, and that de-extincting mammoths would be far more complex than simply altering a few genes for cold tolerance — not least as it was unclear if genetic modifications would be needed to ensure the animals not just look like mammoths but behave like them too. "My overall concern is whether this is a sensible use of resources rather than spending the money on trying to prevent species becoming extinct," Lovell-Badge said, adding another problem is that, at present, there are no results on whether the modified mice are indeed cold-tolerant. "As it is, we have some cute-looking hairy mice, with no understanding of their physiology, behaviour, etc," he said. "It doesn't get them [the researchers] any closer to know if they would eventually be able to give an elephant useful mammoth like traits and we have learned little biology."

Others stressed the work did not involve introducing mammoth genes into mice, but mainly involved making changes to mouse genes to produce known effects on their coats. Dr Tori Herridge of the University of Sheffield, said: "Engineering a mammoth-like elephant presents a far greater challenge: the actual number of genes likely to be involved is far higher, the genes are less well understood — and still need to be identified — and the surrogate will be an animal that is not normally experimented upon." And while some said the goal of reviving the mammoth had drawn closer, others were more sceptical. "Mammoth de-extinction doesn't seem to be on the horizon anytime soon," said Herridge.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 **The first calf of the woolly mammoth ...**

A) will lead to making new Asian elephants.
B) will be born by the end of this decade.
C) will help us to understand how different Asian elephants are.
D) will be the first genetically modified animal in history.

22 **According to the passage, genome editing techniques ...**

A) weren't that efficient.
B) were used to make a modified mouse.
C) weren't effective on embryos.
D) resulted in different kinds of mouse.

23 **What is the suspected role of the disrupted fat-metabolism gene?**

A) It helps the mice to become woolly.
B) It controls the mice's temperature.
C) It may help with cold environment.
D) It may be combined with other genes.

24 **Despite mice which were researched resulted in different hairs ...**

A) they couldn't survive in cold conditions.
B) they all become too fat.
C) their weight doesn't seem to be changed.
D) their metabolism was modified.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 **Lamm claims that despite the breakthrough, the progress doesn't seem to be accelerated.**

A) True
B) False
C) Not Given

26 **The new genetically modified mice were indeed cold-tolerant.**

A) True
B) False
C) Not Given

27 **Colossal Biosciences team are planning to revive other species after woolly mammoth.**

A) True
B) False
C) Not Given

28 **Dr. Tori Herridge claims that mammoth extinction seems to become real very soon.**

A) True
B) False
C) Not Given

29 **De-extinct, genetically modified mammoths won't act like their original counterparts at all.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

WHEN THE TULIP BUBBLE BURST

Long before anyone ever heard of Qualcomm, CMGI, Cisco Systems, or the other high-tech stocks that have soared during the current bull market, there was Semper Augustus. Both more prosaic and more sublime than any stock or bond, it was a tulip of extraordinary beauty, its midnight-blue petals topped by a band of pure white and accented with crimson flares. To denizens of 17th-century Holland, little was as desirable.

Around 1624, the Amsterdam man who owned the only dozen specimens was offered 3,000 guilders for one bulb. While there's no accurate way to render that in today's greenbacks, the sum was roughly equal to the annual income of a wealthy merchant. (A few years later, Rembrandt received about half that amount for painting The Night Watch.) Yet the bulb's owner, whose name is now lost to history, nixed the offer.

Who was crazier, the tulip lover who refused to sell for a small fortune or the one who was willing to splurge? That's a question that springs to mind after reading Tulipmania: The Story of the World's Most Coveted Flower and the Extraordinary Passions It Aroused by British journalist Mike Dash. In recent years, as investors have intentionally forgotten everything they learned in Investing 101 in order to load up on unproven, unprofitable dot-com issues, tulip mania has been invoked frequently. In this concise, artfully written account, Dash tells the real history behind the buzzword and in doing so, offers a cautionary tale for our times.

The Dutch were not the first to go gaga over the tulip. Long before the first tulip bloomed in Europe — in Bavaria, it turns out, in 1559 — the flower had enchanted the Persians and bewitched the rulers of the Ottoman Empire. It was in Holland, however, that the passion for tulips found its most fertile ground, for reasons that had little to do with horticulture. Holland in the early 17th century was embarking on its Golden Age. Resources that had just a few years earlier gone toward fighting for independence from Spain now flowed into commerce. Amsterdam merchants were at the center of the lucrative East Indies trade, where a single voyage could yield profits of 400%. They displayed their success by erecting grand estates surrounded by flower gardens. The Dutch population seemed torn by two contradictory impulses: a horror of living beyond one's means and the love of a long shot.

Enter the tulip. "It is impossible to comprehend the tulip mania without understanding just how different tulips were from every other flower known to horticulturists in the 17th century," says Dash. "The colors they exhibited were more intense and more concentrated than those of ordinary plants." Despite the outlandish prices commanded by rare bulbs, ordinary tulips were sold by the pound. Around 1630, however, a new type of tulip fancier appeared, lured by tales of fat profits. These "florists," or professional tulip traders, sought out flower lovers and speculators alike. But if the supply of tulip buyers grew quickly, the supply of bulbs did not. The tulip was a conspirator in the supply squeeze: It takes seven years to grow one from seed. And while bulbs can produce two or three clones, or "offsets," annually, the mother bulb only lasts a few years.

Bulb prices rose steadily throughout the 1630s, as ever more speculators wedged into the market. Weavers and farmers mortgaged whatever they could to raise cash to begin trading. In 1633, a farmhouse in Hoorn changed hands for three rare bulbs. By 1636 any tulip — even bulbs recently considered garbage — could be sold off, often for hundreds of guilders. A futures market for bulbs existed, and tulip traders could be found conducting their business in hundreds of Dutch taverns. Tulipmania reached its peak during the winter of 1636-37 when some bulbs were changing hands ten times in a day. The zenith came early that winter, at an auction to benefit seven orphans whose only asset was 70 fine tulips left by their father. One, a rare Violetten Admirael van Enkhuizen bulb that was about to split in two, sold for 5,200 guilders, the all-time record. All told, the flowers brought in nearly 53,000 guilders.

Soon after, the tulip market crashed utterly, spectacularly. It began in Haarlem, at a routine bulb auction when, for the first time, the greater fool refused to show up and pay. Within days, the panic had spread across the country. Despite the efforts of traders to prop up demand, the market for tulips evaporated. Flowers that had commanded 5,000 guilders a few weeks before now fetched one-hundredth that amount. Tulipmania is not without flaws. Dash dwells too long on the tulip's migration from Asia to Holland. But he does a service with this illuminating, accessible account of incredible financial folly.

Tulipmania differed in one crucial aspect from the dot-com craze that grips our attention today: even at its height, the Amsterdam Stock Exchange, well-established in 1630, wouldn't touch tulips. "The speculation in tulip bulbs always existed at the margins of Dutch economic life," Dash writes. After the market crashed, a compromise was brokered that let most traders settle their debts for a fraction of their liability. The overall fallout on the Dutch economy was negligible. Will we say the same when Wall Street's current obsession finally runs its course?

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Dutch concentrated on gaining independence by **30** _____ against Spain in the early 17th century; consequently, spare resources entered the area of **31** _____.

Prosperous traders demonstrated their status by building great **32** _____ and with gardens in surroundings.

Attracted by the success of profit on tulip, traders kept looking for **33** _____ lovers and speculator for sale.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 Which of these following statements agree with the information given in the passage?

A) In 1624, all the tulip collection belonged to a man in Amsterdam.
B) Most primary school children need to lose weight.
C) Holland was the most wealthy country in the world in the 17th century.
D) From 1630, Amsterdam Stock Exchange started to regulate Tulips exchange market.

35 According to the author, Tulipmania ...

A) reached its peak in the 16th century.
B) were the first thing that appeared in the Amsterdam Stock Exchange.
C) were the most desired in the winter of 1636-37.
D) made many people homeless and jobless fools.

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

A DAY ON THE FARM

Anna and her brother Lou visited a farm. They were thrilled because they had never seen farm animals up close before. The first **Q1**_____ they encountered were sheep. Lou was surprised to learn that the wool from these **Q2**_____ is used to make clothes such as sweaters and scarves.

Next, they went to the chicken coop. Anna noticed a **Q3**_____ sitting on a nest of eggs. The farmer explained that the **Q4**_____ would hatch in about three weeks. Lou curiously asked if the chicks would resemble their father or mother. The **Q5**_____ laughed and said they might look like both.

Then, they headed to the barn, where they met a friendly cow. Anna was amazed to learn that this **Q6**_____ could produce up to 30 liters of milk. Before leaving, the children bought some milk and eggs and then returned home, happy with their visit.

PART 2

Questions 7–14

Read the texts 7-14 and statements A-J. Decide which situation described in the statements matches with the given texts. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

7

A wedding planner takes care of all the details for a couple's big day, from finding the perfect venue to arranging flowers and catering. They work closely with the couple to create a personalized and unforgettable celebration.

8

Conference organizers plan and manage large events, such as conferences, trade shows, and seminars. They handle everything from booking venues and speakers to coordinating logistics and marketing.

9

Festival coordinators are responsible for planning and executing music festivals, food festivals, and other cultural events. They manage the lineup of performers, vendors, and activities to create a memorable experience for attendees.

10

Party planners specialize in organizing birthday parties, holiday celebrations, and other social gatherings. They take care of everything from decorations and entertainment to food and drinks, making sure the party is a success.

11

Event management companies provide a wide range of services for businesses and organizations, from planning and managing conferences to coordinating corporate events and team-building activities.

12

Charity event organizers plan and manage fundraising events for non-profit organizations. They create events that raise awareness and funds for important causes, such as cancer research or environmental protection.

13

Concert promoters are responsible for organizing and promoting live music concerts and performances. They book venues, secure artists, and handle ticket sales and marketing to ensure a successful event.

14

Sports event organizers plan and manage sporting events, from local tournaments to major championships. They handle everything from venue selection and athlete registration to logistics and marketing.

A) They provide a wide range of services for businesses and organizations.

B) They can provide decorations for your birthday party.

C) They design and build websites for businesses and organizations.

D) Hold your conference without bothering to make any arrangements.

E) Make your happiest day of your life memorable with the help of wedding planners.

F) They handle everything like booking venues and speakers for tournaments.

G) They can arrange music and food for your festival.

H) They create events that raise funds for important causes.

I) They provide legal advice and representation to individuals and businesses.

J) They book venues, sell tickets, and arrange other things ensure a successful event.

PART 3

Questions 15–20

The reading passage has six paragraphs. Choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Unexpected Tech Failure
B) Military Use
C) World Without Drivers
D) Health Benefits
E) Saving Time And Money
F) Other Side of the Coin
G) Robotic Future
H) Specialised Vehicles

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

TECH & THE FUTURE

I. Globally released worldwide, Microsoft Vista hit the markets in early 2007. Its ideology was to enhance the security system of the personal computer. But the security features weren't all that better than its previous versions', according to many software critics. Vista is also not compatible on all sorts of PC's and runs slower compared to Windows XP. All of this prevented Vista from being a better version and it never took off like the company had hoped.

II. A couple centuries ago, if you wanted to record a moment for posterity, you sat around for hours or days while someone painted it. Up until ten years ago, you were at the mercy of photo developers charging 20 cents or more to help preserve your memories. Now you can record countless images and store them electronically for all of eternity at virtually no cost per picture.

III. With technology advancing at the pace it is today, we have to believe that by the end of the century we won't be driving our cars around the city. Rather, we will just be sitting on the then historic driver's seat and doing some work. While the concept looks futuristic, industrial designer Kubik Petr believes that nothing seems impossible with modern technology at hand.

IV. The Kenguru is designed only for the disabled. Previously car manufacturers would design cars for the disabled but not specifically for them. This Hungarian company is taking it to the next step, the disabled will be able to open the rear of the car and just roll in the driving position, secure their wheelchair -- without never having to leave their chair.

V. Technology certainly offers us innumerable comforts within our world, especially when it comes to people who have extreme medical conditions and need the help of science and technology to live comfortably within their everyday lives. The creation of robot limbs allows a person to walk again. The introduction of synthetic body parts such as a heart pump can help a person to live longer.

VI. Everyone knows that being a soldier is a dangerous job. Walking through mine fields, deactivating unexploded bombs or clearing out hostile buildings, for example, are some of the riskiest tasks. What if we could send robots to do these jobs instead of humans? Then, if something went wrong, we'd only lose the money it cost to build the robot instead of losing a human life.

PART 4

Questions 21–29

Read the following text for questions 21-29.

A BRIEF HISTORY OF LONDON UNDERGROUND

It is a staple of not just the capital of the UK, but of British culture in general. It is used by more than 1.3 billion people per year, and it is more than 400 kilometres long. It has survived fires, floods, terrorist attacks and two world wars, and it has been described as a "form of mild torture", a "twopenny tube" and a system of "padded cells". It is London Underground, and it has been around for more than 150 years. But how did it all start?

The idea of an intricate train network running underneath a vibrant and heavily populated city like London might not be such a novelty in contemporary society, but it certainly was one back in the early 19th century when it was first conceived. In fact, the only reason such a notion at the time described by The Times as an "insult to common sense" was even entertained in the first place was pure desperation: during the Victorian era, London roads were insufferably overcrowded, and a Royal Commission of 1846 meant that central London was out of bounds for railway companies, whose mainline railways all had to stop just outside the City and West End.

And so the story begins, in 1863, with the opening of the Metropolitan Railway, which ran between Paddington (called Bishop's Road at the time) and Farringdon, serving a total of eight stations. Five years later, in 1868, the first section of the Metropolitan District Railway (now incorporated into the District and Circle lines) followed, running from South Kensington to Westminster. Within the first fifty years, much of what is known as Zone 1 of the London Underground system today would be built, all funded by private developers. (Unfortunately for them, none would get the financial returns they had been promised.)

People nowadays might complain about the atmosphere in London Underground, particularly in the summer, but it is nothing compared to the conditions the Metropolitan Railway's passengers had to weather during the first years of its operation. So foul was the smell in the tunnels that spread under the city that drivers were allowed to grow beards, in hopes that this would protect them from inhaling the billowing smokes. (According to the account of a civil servant from that time, the stink in the underground was comparable to that of a `crocodile's breath'.) Nevertheless, the line was a smashing success from the very beginning, with more than 11 million passengers in just the first year.

The second spate of construction works arrived with the development of electric traction at the end of the 19th century, which meant that trains no longer had to run through shallow tunnels to allow room for the steam produced by the engines to escape. Instead, new tunnels could now be dug, cutting deeper into the belly of the city. The first deep-level electric railway was opened in December 1890 by the City and South London Railway, connecting King William Street to Stockwell. In the following fifty years, the existing tube lines would systematically be extended, branching into London's various suburbs. Surprisingly, it would take until 1968 for an entirely new line to

open again: the Victoria Line (provisionally named the Viking Line), which was followed by the Jubilee Line eleven years later.

For questions 21-24, choose the correct answer A, B, C, or D.

21 What happened to the private investors who financed the early construction of the London Underground?

A) They made significant profits from their investments.
B) They were given financial support by the government.
C) They failed to earn the profits they had expected.
D) They were eventually absorbed into official government roles.

22 What was a significant issue faced by passengers and train operators during the early days of the Metropolitan Railway?

A) Train services were often delayed because of too many passengers.
B) The tunnels became unbearably hot due to lighting systems.
C) The tunnels regularly caved in while trains were running.
D) The air in the tunnels was filled with thick smoke and terrible odors.

23 What key innovation made it possible to build deeper tunnels for the London Underground?

A) The introduction of electric-powered trains
B) The creation of electric lighting systems
C) Better air circulation technology
D) The adoption of stronger building materials

24 Which of these facts accurately reflects the history of the London Underground?

A) The Jubilee Line was the first underground railway to use electric traction.
B) The Victoria Line, initially named the Viking Line, started operations in 1890.
C) Numerous brand-new lines were introduced between 1910 and 1960.
D) The City and South London Railway launched the first deep-level electric line in 1890.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 More than 1.3 billion British people use London Underground annually.

A) True
B) False
C) Not Given

26 London Underground has undergone significant challenges.

A) True
B) False
C) Not Given

27 London Underground was built last century.

A) True
B) False
C) Not Given

28 Central London was not directly reachable via rail transportation.

A) True
B) False
C) Not Given

29 The Metropolitan Railway carried millions of passengers in 1863 between Paddington and Farringdon.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE SUSSEX BABY LAB

Alice Skelton and fellow researchers at the Baby Lab at the University of Sussex in the UK are attempting to answer a basic question which has fascinated parents and scientists alike: when it comes to colour, what exactly can babies see? The Baby Lab study also hopes to develop ways to identify babies at risk of becoming colour blind and to discover ways to minimise the impact of this condition on their health and well-being. The technology used at the Baby Lab involves a sophisticated eye-tracking system which allows the researchers to follow the eye movements of the babies. While a camera locks its focus onto their faces, sensors register the corneal reflections in the babies' eyes and the position of the pupils in the eyes. With this data, the researchers can assess the babies' reactions to colours.

To illustrate one of their methods of studying babies, the Sussex researchers place an infant subject, four-month-old Teo Bosten-Lam, in a padded seat arranged so he gazes at a computer screen. The screen is grey, but in the top right-hand corner is a deep blue circle. When Teo shows he is aware of the circle by looking directly at it, it changes into a smiley face and a happy tune fills the room. At one point, Teo begins to look around the room. When this happens, suddenly a black and white spinning disc appears on the screen, making a 'bong' sound. A researcher explains, 'Babies can't resist the black and white swirl things.' These are played when they look away to get their attention back to the screen. And, when Teo shows he is getting tired of the whole process, the screen flashes a clip of an animated cartoon character. This results in Teo's eyes returning to the screen.

To a baby, the world changes rapidly. At birth, everything is a blur, with visual acuity around 5% of that a mature individual and faces initially only discernible at a distance of around 30 cm. But change is rapid. 'The early stages of learning to see colour and basic forms happen relatively quickly,' says Alex Wade, professor of psychology at Britain's University of York and an expert in visual processes. By the age of six months, he adds, a baby's visual acuity has developed to almost its full extent.

Just how such changes occur, and their impact on a baby's understanding of the world, is the driving force behind baby labs around the world in many different things. The Sussex Baby Lab is attempting to discover how colour is seen and understood by infants; 'It is a myth that babies see in black and white,' says Anna Franklin, head of the Baby Lab, pointing out that studies have found that newborn babies can see large, bright patches of red on a grey background. An expert on colour vision, Franklin is engaged in infancy to why certain children have colour obsessions. Her research has aided the development of infant toys, as well as children's theatre and television shows.

That we can see the world in glorious colour at all, Franklin points out, depends on specialist cells in the retinas of our eyes.

Known as cones, these come in three types — those sensitive to long, medium, and short wavelengths of light. While babies are born with all three types of cones, it takes time for these to mature, and for the brain to make sense of the signals on which a baby's discrimination of colours depends. By two months, babies can tell red and green colours apart; a few weeks later, they can also recognise blues and yellows. But the intensity of the colours is crucial. Franklin notes that if you show a baby a kind of washed-out green, they won't be able to see it, even if they can see a strong green. While a gradual improvement in a baby's ability to see faint colours occurs as they mature, it isn't known whether all colours need to be just as strong for a baby to spot them.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD for each question.

The Baby Lab at the University of Sussex uses eye-tracking systems to understand what **30** _____ can perceive. This equipment monitors both the reflections on the cornea and the position of the **31** _____. When babies such as Teo lose interest during testing, researchers use **32** _____ patterns to get their attention back. Though colour vision is not yet fully developed at birth, babies are born with the necessary **33** _____ in their eyes to eventually see the full range of colour.

For questions 34-35, choose the correct answer A, B, C, or D.

34 What does Anna Franklin say about the idea that babies only see in black and white?

A) It is supported by recent lab results.
B) It applies only to the first few days of life.
C) It has been proven false by research.
D) It explains why babies react to sound more than visuals.

35 What factor affects a baby's ability to detect certain colours?

A) Their exposure to outdoor light
B) The distance of an object
C) The object's shape and size
D) The strength of the colour

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

IMPORTANCE OF DENTAL CARE

Regular dentist visits can do more than keep your smile attractive. They can tell dentists a lot about your overall health, including whether or not you may be at risk for disease. New research suggests that the **Q1**_____ of your mouth mirrors the condition of your body as a whole. For example, when your **Q2**_____ is healthy, chances are your overall health is good, too. On the other hand, if you have poor oral health, you may have other health problems, so it is important to see a dentist on a regular basis.

Dentists are not hard to find. If you are working, and have dental insurance coverage, your company will provide a list of **Q3** _____ care offices whose services are covered by their insurance. It would be wise to check this out. However, why is dental hygiene so important? Research shows that more than 90 percent of all systemic diseases, which involve many organs or the whole body, have oral health connections, including swollen gums, mouth ulcers, dry mouth and excessive gum problems. Diseases such as diabetes, oral cancer, heart or kidney **Q4** _____, leukemia, and pancreatic cancer can all have ties to poor oral hygiene.

Some of the things you can do starts with seeing a dentist on a regular basis. Seeing a **Q5**_____ regularly helps to keep your mouth in top shape and allows your dentist to watch for developments that may point to other health issues. A dental exam can detect problems such as poor nutrition, and improper jaw alignment. Provide your dentist with a complete medical history, and inform him or her of any recent health developments, even if they seem unrelated to your oral health. One of the great advantages of **Q6**_____ health is having a great smile. A healthy smile can give a person confidence and is a good indication of a healthy body.

PART 2

Questions 7–14

There are descriptions of companies that have job vacancies in different departments. Decide which company would be the most suitable for the following people.

7

Harvey has been working for the same bank for 10 years and does not feel appreciated. His salary has not changed for 6 years and there are no promotion prospects. He has spent the past 10 years helping new companies build their businesses and is an expert in his field.

8

Michael is the local area manager for a chain of shops in a medium sized city in the north of England. He gets a good salary but he is bored and needs a bigger challenge. He is looking for a similar job but with more responsibilities.

9

Elsa has worked for the Foreign Office for 16 years and although her work is interesting enough she is getting tired of diplomacy. She is extremely creative, speaks several languages and has excellent communication skills. She knows how to say the right things in any situation, no matter how complicated or tough.

10

Steve has done several things during his working life but has worked mostly in IT. He has been a code writer, technical support manager, network engineer, project manager, systems analyst and web page developer. He is getting a little bored of working on his own and is looking for a job where he can work with people.

11

Caroline has been working in the marketing department of a toy manufacturer for 8 years. She specializes in market research but would like to move into sales and work fewer hours than she does now. She is looking for a job that also provides childcare facilities for her 3 year-old twins.

12

Marcia's really sociable and likes spending time with other people. She also enjoys baking. In the holidays she looks after her little brother from Monday to Friday, so is only available to work at weekends.

13

Danny's going to run a marathon, so he spends his days training. However, he's free in the evenings. He enjoys being outside and doesn't want to be kept inside at work.

14

Ellie wants to work for a few hours a week. She doesn't want to work at weekends. She enjoys spending time in nature and she's happy to work on her own.

A) ASOBI This video game developer has existed for over 40 years and is recognised as a world leader in virtual reality games. Its European HQ has been in London for 15 years and has plans to expand. The company is looking for sales executives to help plan the next European sales campaign. Attractive salaries and benefits including gym, company creche, luncheon vouchers and generous holidays are on offer to candidates.

B) Monroe Financial Services This company has been around for 150 years and is highly respected. It provides financial advice and consultancy work for big business and has an impressive rate of success. An opening has become available for a financial advisor for start-up companies. The post offers a competitive salary with promotion prospects plus benefits including a company car and private health insurance to the successful candidate.

C) Dairycow Farm This food processing company has several plants in the UK and the Republic of Ireland. Its most popular product is cheese although it has gained enormous profits from its sales of yogurt. The company is looking for a production manager for a new plant in the north of Spain. The company will help look for accommodation and Spanish classes.

D) Pokey Pola This soft drinks company was founded in 1922 and has been a market leader ever since then. Sales of its soft drinks continue to go up but it would like to expand into the energy drink market. It needs a marketing manager with a good track record to do this. Long hours are required but the salary more than compensates for that.

E) Suncom is the most successful IT 14 solution provider in Ireland and is opening an office in London to deal with its growing client base. The company is looking for a training manager to work in the human resources department. The successful candidate will be responsible for designing and running training courses for new employees just starting with the company.

F) The Idea Shop The leading public relations company in the world is, without doubt, The Idea Shop. This company was founded in 1961 and has advised governments and big business on how to communicate with the public and media on important issues. A well-paid post for client account manager is on offer. An ability to communicate well and give imaginative solutions to complex problems is vital in this role.

G) Kokina Kokina is a leading name in the cell phone industry. Its products will sell around the world even if they are a little out-dated. These mobile phones are perceived as durable and virtually indestructible. The trouble is, modernising has been very difficult. The company is looking for a strategy manager to plan and oversee modernisation.

H) Markdown The leading low-cost clothing retailer in the UK has only been around for about 5 years but is dominating the market. Almost every high street in the country has an outlet of Markdown and the company employs more than 10,000 workers. A regional manager is needed for the south west of the country to oversee operations and maintain its position as the number one retail outlet for the area.

I) Kitchen assistant required we need a part-time assistant to work in the small kitchen of our hotel restaurant. The job involves preparing food before the restaurant opens and then cleaning the dishes after they have served the food. We require someone to work three hours Tuesday to Saturday, and Friday and Saturday evenings. We offer good pay.

J) Dog sitter needed we'd like to employ a local dog sitter to look after our two dogs for one hour a day Monday to Friday. We'd like you to take the dogs for a walk through the woods and then feed them when they return home. We're looking for a responsible, independent person.

K) Care home assistant wanted A young person is wanted to work at our care home for four hours on Saturday and Sunday afternoons. The job requires you to make tea and fetch snacks for our elderly residents, as well as sit and chat to them. All our assistants must have basic kitchen skills.

L) Furniture delivery person wanted Do you want to keep fit? Do you enjoy varied work? Are you willing to work many hours a week? If so, then apply for the job of delivery person at our furniture shop. We deliver large pieces of furniture to customers, so you'll need to be physically strong and happy to travel out of the area.

M) Weekly delivery person needed We're looking for a fit, healthy person to deliver our weekly newspaper to over 100 homes in the Dilton area. You must be able to walk or cycle over three miles while pulling a shopping trolley full of newspapers in all kinds of weather. The job takes around three hours per week. We're happy for you to do it after 6 pm.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Potential production capabilities of vertical farms
B) Opposition to new ideas about food production
C) A successful application of vertical farming technology
D) The potential to provide urgent relief
E) The original inspiration for vertical farming
F) Various environmental benefits of vertical farming
G) An increasing problem for farmers worldwide
H) A return to traditional farming methods
I) A rising demand for food

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

SKYSCRAPER FARMING

I. Today's environment scientists are in no doubt that the world's resources of fertile soil are rapidly deteriorating, and that new land for agriculture is becoming ever more sparse. Intensive farming, urbanisation, desertification and sea-level rises are all putting growing pressure on the planet's agricultural land and therefore on food supplies. Currently 24 per cent of the world's 11.5 billion hectares of cultivated land has already undergone human-induced soil degradation particularly through

erosion, according to a recent study by the UK Government Office for Science.

II. The global population is expected to exceed nine billion by 2050 — up a third from today's level and studies suggest that food production will have to go up by 70 per cent if we are to feed all of those new mouths. This means that scientists will have to develop new ways of growing crops if we are to avoid a humanitarian crisis. Indeed, UN Food and Agriculture Organization figures suggest that the number of undernourished people is already growing. And with escalating climate change, crop yields in many areas have been projected to decline.

III. With this in mind, some scientists and agricultural experts are advocating an innovative alternative to traditional farming whereby skyscrapers packed with shelf-based systems for growing vegetables on each storey, known as 'vertical farms', could hold the key to revolutionising agriculture. Columbia University professor Dickson Despommier claims that vertical farming could boost crop yields many times over. A single 20-storey vertical farm could theoretically feed 50,000 people, according to Despommier. And if the theory translates into reality as proposed, 160 skyscraper-sized vertical farms could feed the entire population of New York City, while 180 would be needed to feed London, 289 to feed Cairo and 302 to feed Kolkata.

IV. It's a compelling vision, and one that has already been put into practice in Asia. Albeit on a smaller scale. But there are problems, such as initial investment and operating costs that are too great' says a spokesman for Japan's Ministry of Agriculture, Forestry and Fisheries. Nevertheless Tokyo-based mushroom producer Hokuto Corporation is a model example of how a vertical farm can be profitable. With 28 vertical mushroom farms operating across the country, it produces some 68,000 tonnes of mushrooms annually. 'Vertical mushroom farms have many advantages over ground-level farms,' says Hokuto's Ted Yamanoke. Yamanoke goes on to highlight the relative cost-effectiveness of his organisation's farming practices together with reduced emissions of greenhouse gases.

V. And the impact of vertical farms could extend beyond firmly established urban populations. Despommier sees them as being capable of helping centres of dispossessed persons — such as refugee camps — in much the same way that Mobile Army Surgical Hospital (MASH) units are deployed in emergency situations. 'Developing an emergency response system for crop production inside specially constructed modular and highly transportable greenhouses would allow for humanitarian interventions, at least for refugees that are forced out of their countries by political turmoil,' he says. 'If you have three or four storeys of food already growing some place, they could become mobile units that could be picked up by helicopters and dropped into the middle of a crisis zone. The food would be ready to pick and eat. It could be designed to supply people with all the nutrition they need to make it through the crisis.'

VI. But it isn't only about increasing food production. Despommier is concerned about the harm which farming has done to the world's landscape over a relatively short time span, particularly the elimination of hardwood forests. 'Farming is only 12,000 years old,' he points out. 'Vertical farming could for the first time allow us to feed everyone on earth and still return land to its original ecological function.' Natalie Jeremijenko, associate professor at New York University, agrees. 'The challenge that we have now is how we can design urban agriculture systems that not only reduce food miles, but also improve the world's ecosystems,' she says. By significantly reducing the amount of land required for food production, vertical farms could help to enrich biodiversity. And according to Jeremijenko, this can, in turn, help to improve the productivity of conventional farms, as the health of agricultural land is often tied to the health of the surrounding ecosystems. Furthermore, vertical farming could dramatically cut the utilisation of fossil fuels. And also reduce geopolitical tensions in countries where poor farming conditions cause conflict and malnutrition.

PART 4 Questions 21–29

Read the following text for questions 21-29.

THE FLUORIDATION CONTROVERSY

The long-standing debate about whether to fluoridate our drinking water continues. Fluoridation is the addition of fluoride to public water supplies with the aim of reducing tooth decay. The fluorine, when mixed with water, becomes fluoride and the desired concentration of fluoride in public water is approximately one part per million, depending on the regional temperature and hence the amount of water people are likely to drink. Many studies, such as those by McClure in 1970 through to Burt in 1983, have shown that when children drink fluoridated water, their average rate of tooth decay seems reduced. A typical figure claimed is 50 percent reduction. This apparently enormous benefit for children's teeth is the major argument in favor of fluoridation.

Three main grounds for opposition to fluoridation have been expressed. First, opponents claim the benefits are exaggerated or not established. Second, there are claims of health risks to part of the population, for example, allergic reactions. It is also accepted that high levels of fluoride can cause discoloration of otherwise healthy teeth. Proponents do not consider this to be a problem in such small concentrations, whereas opponents disagree — especially because some people drink more water and obtain much more than the standard 1 milligram of fluoride per day. Third, fluoridation is thought to be an infringement on individual rights because it is compulsory medication of all members of a community.

An understanding of the fluoridation issue has important implications. If, according to the experts, fluoridation is unquestionably a beneficial and non-hazardous measure, then the wisdom of allowing the public to vote on, and reject it must be questioned.

Almost all studies that have been done have assumed that the scientific aspects of the controversy are unproblematic, and they have excluded science from sociological examination. The traditional view is that science is a special kind of knowledge, which is established through scientific methods and successively applied by members of a scientific community. However, in recent years there has been a major challenge to this picture by a sociology of science that views how scientific knowledge is socially negotiated, and inevitably linked to the values of the relevant parties, both internalist and externalist. These challenges do not see scientific knowledge as exempt from social inquiry.

Kuhn (1970) argued that scientific knowledge does not always develop as an orderly process, but is characterised by periodic revolutions, in which the methods of study and the assessment criteria change in a fragmented way. According to Kuhn, the shift from one scientific way of thinking to another is not made solely on the basis of clear rules of formal scientific practice, but can include social factors, though Kuhn has never developed a full analysis of what these might be. Collins (1975) took this concept further when he asserted that the outcome of experiments was not something whose meaning could be immediately comprehended, but rather something foregone conclusion between scientists, and reinterpretation in the light of online experiments.

One interpretation of this analysis of science is that traditional distinctions between facts and theories, and between scientific knowledge and values, can no longer be justified. Because social processes are involved in all stages of the creation, evaluation, and establishing of scientific knowledge, social values may also be involved.

In the same way as many scientists who study fluoridation have overlooked social values, sociologists have also downplayed an important part of the debate by ignoring the studies of eminent scientists who have questioned aspects of fluoridation. An example is the study by Sutton in 1960, which analyzed the classic North American studies of the effect of fluoridation on tooth decay, and found that each showed significant methodological shortcomings. Sutton's detailed study throws doubt as to the extent of reductions in tooth decay from fluoridation. Yet Sutton's book is not cited in a single analysis of the fluoridation issue by any sociologist. In a situation of some scientific uncertainty, differences in values are highlighted. A supporter of fluoridation might argue, 'The evidence for the benefits of fluoridation is quite substantial, while the evidence for harm is limited and dubious. I think the likely benefits outweigh the possible dangers; hence I support fluoridation because it is the cheapest and easiest way to make sure every child reaps the benefits.' An opponent might argue, 'Though the evidence for the benefits of fluoridation is substantial, there is some doubt about it. Since fluoridation is not necessary for good teeth, we should forego the benefits if there is some slight chance of harm. Some scientists claim that a small percentage of the population could be harmed by fluoride. Therefore I oppose fluoridation of water supplies and favor the voluntary use of fluoride tablets by those who want to take them.'

Both arguments consider the scientific evidence concerning fluoridation, but differ in their assessments of the social benefits and costs. This difference is not between rationality and irrationality but is a legitimate difference in values, for example, the positive value placed on good teeth, the negative value placed on possible health risks, and the social benefits or costs of compulsory or voluntary intake of fluorides.

From the sociological point of view, opposition to fluoridation is not necessarily irrational. Rather, claims to rationality and to scientific authority are better seen as part of a strategy to promote fluoridation than as incontrovertible statements of fact. Second, social values are likely to be bound up in any decision about fluoridation, so this is not an issue on which declarations by scientific experts ought to be considered the final word.

For questions 21-25, choose the correct answer A, B, C, or D.

21 **The optimum amount of fluorine in fluoridated water is calculated partly according to**

A) how hot the area is.
B) how warm the water is.
C) how many dental problems there are in the community.
D) how much fluorine the community chooses to have in its water.

22 **One reason given by the writer for opposing fluoridation is that**

A) it may contribute to tooth decay.
B) it will be unacceptably expensive for the public.
C) obligatory fluoridation takes away personal freedom.
D) excessive fluoride could be added to the water by mistake.

23 **The writer mentions Kuhn in order to**

A) provide a contrast with the view of Collins.
B) support the rational nature of scientific inquiry.
C) demonstrate that Kuhn did not argue his case adequately.
D) show that science can be influenced by non-scientific considerations.

24 **What did Sutton's research discover about earlier studies in North America?**

A) There were failings in the way they were carried out.
B) The scientists involved had achieved unique results.
C) Proponents of fluoridation had not understood its long-term effects.
D) Fluoridation had a greater effect on tooth decay than previously believed.

25 **In the last paragraph, what does the writer say about scientists?**

A) They should reveal their true motivations.
B) They should not decide the fluoridation policy.
C) They are solely concerned with scientific truths.
D) They cannot reach agreement on the fluoridation issue.

For questions 26-29, decide if the following statements agree with the views of the writer.

26 **Scientific knowledge should be kept separate from social values.**

A) True
B) False
C) Not Given

27 **Many sociologists have disregarded the doubts that some scientists have concerning fluoridation.**

A) True
B) False
C) Not Given

28 **Sutton's findings have been given insufficient attention by scientists outside of North America.**

A) True
B) False
C) Not Given

29 **There are valid arguments on both sides of the fluoridation debate.**

A) True
B) False
C) Not Given

Read the following text for questions 30-35.

ECONOMIC EVOLUTION

Sitting along the Orinoco River that borders Brazil and Venezuela are the Yanomami people, hunter-gatherers whose average annual income has been estimated at the equivalent of $90 per person per year. Living along the Hudson River that borders New York State and New Jersey are the Manhattan people, consumer-traders whose average annual income has been estimated at $36,000 per person per year. That dramatic difference of 400 times, however, pales in comparison to the differences in Stock Keeping Units (SKUs, a measure of the number of types of retail products available), which has been estimated at 300 for the Yanomami and 10 billion for the Manhattanites, a difference of 33 million.

How did this happen? According to economist Eric D. Beinhocker, who published these calculations in his revelatory work The Origin of Wealth (Harvard Business School Press, 2006), the explanation is to be found in complexity theory. Evolution and economics are not just analogous to each other, says Beinhocker, but they are actually two forms of a larger phenomenon called complex adaptive systems, in which individual elements, parts, or agents interact, then process information and adapt their behaviour to changing conditions. Immune systems, ecosystems, language, the law and the Internet are all examples of complex adaptive systems.

In biological evolution, nature selects from the variation produced by random genetic mutations and the mixing of parental genes. Out of that process of cumulative selection emerges complexity and diversity. In economic evolution, our material economy proceeds through the production and selection of numerous permutations of countless products. Those 10 billion products in the Manhattan village represent only one percent of the possible types of products that are theoretically possible according to Beinhocker's calculations. As complex as our economy appears to be, it represents only the very tip of the iceberg of complexity that is possible. Most of these products evolved in the marketplace for those deemed most useful, with the best technology winning, others becoming relics found only in museums and remanufacturing.

The correspondence between evolution and economics is not perfect, because some top-down institutional rules and laws are needed to provide a structure within which free and fair trade can occur. But too much top-down interference into the marketplace makes trade neither free nor fair. When such attempts have been made in the past, they have failed — because markets are far too complex, interactive and autocatalytic to be designed from the top down. In his 1922 book, Socialism, Ludwig Von Mises spelt out the reasons why most notably the problem of 'economic calculation' in a planned socialist economy. In capitalism, prices are in constant and rapid flux and are determined from below by individuals freely exchanging in the marketplace. Money is a means of exchange, and prices are the information people use to guide their choices. Von Mises demonstrated that socialist economies depend on capitalist economies to determine what prices should be assigned to goods and services. And they do so cumbersomely and inefficiently. Relatively free markets are, ultimately, the only way to find out what buyers are willing to pay and what sellers are willing to accept.

Economics helps to explain how Yanomami-like hunter-gatherers evolved into Manhattan-like consumer traders. In the Nineteenth century French economist Frédéric Bastiat well captured the principle. 'Where goods do not cross frontiers, armies will.' In addition to being fierce warriors, the Yanomami are also sophisticated traders, and the more they trade the less they fight. The reason is that trade is a powerful social adhesive that creates political alliances. One village cannot go to another village and announce that they are worried about being conquered by a third, more powerful village — that would reveal weakness. Instead, they mask the real motives for alliance through trade and reciprocal feasting. And, as a result, not only gain military protection but also initiate a system of trade that — in the long run — leads to an increase in both wealth and SKUs.

Free and fair trade occurs in societies where most individuals interact in ways that provide mutual benefit. The necessary rules were not generated by wise men in a sacred temple or lawmakers in congress, but rather evolved over generations and were widely accepted and practised before the law was ever written. Laws that fail this test are ignored. If enforcement becomes too onerous, there is rebellion. Yet the concept that human interaction must, and can, be controlled by a higher force is universal. Interestingly, there is no widespread agreement on who the 'higher force' is. Religious people ascribe good behaviour to God's law. They cannot conceive of an orderly society of atheists. Secular people credit the government. They consider anarchy to be synonymous with barbarity. Everyone seems to agree on the concept that an orderly society requires an omnipotent force. Yet, everywhere there is evidence that this is not so. An important distinction between spontaneous social order and social anarchy is that the former is developed by work and investment, under the rule of law and with a set of evolved morals while the latter is chaos. The classical liberal tradition of von Mises and Hayek never makes the claim that the complete absence of top-down rules leads to the optimal social order. It simply says we should be sceptical about our ability to manage them in the name of social justice, equality, or progress.

For question 30, choose the correct answer A, B, C, or D.

30 What ought to play a vital role in each field of the economy?

A) a strict rule
B) a smart strategy
C) a tightly managed authority
D) a powerful legislation

Complete the following summary of the paragraphs of Reading Passage, using no more than THREE words from the Reading Passage for each answer.

In response to the search for reasons for the phenomenon shown by the huge difference in the income between two groups of people both dwelling near the rivers, several researchers made their effort and gave certain explanations. One attributes **31** _____ to the interesting change claiming that it is not as simple as it seems to be in appearance that the relationship between **32** _____ which is a good example of **33** _____, which involved in the interaction of separate factors for the processing of information as well as the behavioural adaptation to unstable conditions. As far as the biological transformation is concerned, both **34** _____ and the blend of genres from the last generation brings about the difference. The economic counterpart shows how generating and choosing the **35** _____ of innumerable goods moves forward the material-oriented economy.

MOCK TEST 52

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

SHREK

Somewhere in a far-away magical kingdom, there lived a beautiful princess, a prince and animals who could talk like humans. This is a typical plot for many fairy tales and **Q1** _____ In 1990, a short story for children about Shrek, a big green troll, appeared. Unlike previous heroes he looked ugly and scary but had a big, kind heart. In 2001, DreamWorks studio made the first animated Shrek cartoon. All the characters of the cartoons about Shrek are easy to remember and have a good sense of humour. The **Q2** _____ are full of episodes about friendship, good and evil, love and family values. The cartoons present an amusing mixture of traditional **Q3** _____ tales and real-life events familiar to everyone.

Maurice Tillet was a famous professional French boxer and wrestler of the 20th century. Unfortunately, at the age of twenty he got a rare disease which changed his body and appearance. It made him look like a huge **Q4** _____. Few people know that Shrek's appearance copies that of Maurice Tillet. However, in contrast to the cartoon character, Maurice Tillet was highly intelligent — he spoke fourteen languages and was good at writing prose. Several scenes in cartoons about Shrek are based on **Q5** _____ from famous movies. During the fight between Fiona and Robin Hood's men, the camera moves as in 'The Matrix'. There are hints of the 'The Lord of the Rings' and 'Mission Impossible'.

The famous story was also made into a Broadway show, 'Shrek the Musical'. Technically, the musical **Q6** _____ is not the same as the film but it has its advantages. Children and adults enjoy seeing celebrities in the roles of Shrek and Princess Fiona.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

7
You're looking for a meal that has no meat.

8
You're a student looking for a quiet place to study.

9
You're on a date and want a romantic setting.

10
You're a coffee enthusiast and want high-quality coffee.

11
You're a dog owner and want to bring your furry friend with you.

12
You're a health-conscious person and want nutritious options.

13
You're a book lover and want a cafe with a library.

14
You're a traveler and want to try local cuisine.

A) THE GREEN BEAN CAFE. We specialize in vegan and vegetarian cuisine with fresh, locally-sourced ingredients.

B) THE BEAN ROASTERY. We roast our own coffee beans for a true coffee connoisseur experience.

C) THE LOCAL FLAVOR CAFE. We serve authentic local dishes and drinks for a true taste of the area.

D) THE STUDY CAFE. Our cozy atmosphere and free Wi-Fi make us the perfect spot for studying and working.

E) THE BOOKWORM CAFE. Browse our collection of books while enjoying coffee and pastries.

F) THE PARTY CAFE. We have a DJ and dance floor for a fun night out with friends.

G) THE CANDLELIT CAFE. Enjoy a candlelit dinner with your loved one in our intimate and cozy cafe.

H) THE FRESH BITES CAFE. We specialize in fresh, locally-sourced ingredients with various recipes. There are vegetarian options too.

I) THE KIDS CORNER CAFE. Our menu has options for both kids and adults, and we have a play area for children.

J) THE PAWSOME CAFE. We welcome pets and have a special menu just for them!

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Health Problem
B) Significant Difference
C) Fashions in Food
D) New Weapon
E) The Price of Success
F) Holiday Regulations
G) Strong Competitor
H) Psychological Barrier

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

LIST OF HEADINGS

I. Nowadays, potatoes are the 'in' thing so far as health is concerned. In the 60s and 70s we were told to avoid them at all costs for fear of getting fat, but now they have been reinvented by the dieticians as a source of fibre and vitamins. Sensible people, like you and me, have always eaten them because they taste so good.

II. Organizing a holiday isn't the easiest task in the world; there are so many things to think about. Let's keep it simple by assuming that there's no overseas travel to arrange. That doesn't mean that you can also forget about injections and other health precautions entirely. What about sun blocker? What about regular medication prescribed by your doctor? My point, quite frankly, is that planning a holiday can be a real pain although a well-planned holiday can more than reward the pains you go to before you set out.

III. Symantec, McAfee and Trend Micro have the US market for anti-virus software sewed up between them. But here comes Russia's Kaspersky Lab trying to gain a foothold. The Moscow-based company opened a sales office outside of Boston in February and has signed up about 40 resellers. Kaspersky reacts quicker than the giants to new viruses and other forms of malware, and gets fixes out fast.

IV. Sitting in the office armchairs all-day long has become the norm for many of us. Stress and rush make us forget about regular food and stuff our stomachs with cheeseburgers and sodas, which don't do any good to our bodies. As a result, we rarely find time for exercises, gyms or balanced nutrition and it's one of the reasons why a lot of people are overweight nowadays. However, it is possible to change your lifestyle and lose your weight if you are willing to.

V. The Internet is a very effective medium for spreading ideas or news. It eliminates geographical boundaries, and Greenpeace is aware of it, and benefits from it. For instance, in 1995, Greenpeace utilised its site to publicise a route that the French use to send shipments to Japan. They also included the fax number of the French Embassy and of the newspaper Le Monde so that letters of protest could be sent.

VI. The biggest problem most people face in learning a new language is their own fear, like Stage Fear. They worry that they won't say things correctly or that they will look stupid so they don't talk at all. Don't do this. Actually, the fastest way to learn anything is to do it — again and again until you get it right. Like anything, learning English requires practice. Don't let your fear stop you from getting what you want.

PART 4

Questions 21–29

Read the following text and choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

CATASTROPHIC CLIMATE CHANGE

The risk of catastrophic climate change is getting worse, according to a new study from scientists involved with the United Nations Intergovernmental Panel on Climate Change (IPCC). Threats — ranging from the destruction of coral reefs to more extreme weather events like hurricanes, droughts and floods — are becoming more likely at the temperature change already underway: as little as 1.8 degree Fahrenheit (1 degree Celsius) of warming in global average temperatures.

'Most people thought that the risks were going to be for certain species and poor people. But all of a sudden the European heatwave of 2003 comes along and kills 50,000 people; [Hurricane] Katrina comes along and there's a lot of data about the increased intensity of droughts and floods. Plus, the dramatic melting of Greenland that nobody can explain certainly has to increase your concern,' says climatologist Stephen Schneider of Stanford University, who co-authored the research published this week in the Proceedings of the National Academy of Sciences as well as in several IPCC reports. 'Everywhere we looked, there was evidence that what was believed to be likely has happened. Nature has been cooperating with climate change theory unfortunately.'

Schneider and his colleagues updated a graph, dubbed the 'burning embers,' that is designed to map the risks of damage from global warming. The initial version of the graph drawn in 2001 had the risks of climate change beginning to appear after 3.6 or 5.4 degrees F (2 to 3 degrees C) of warming, but the years since have shown that climate risks kick in with less warming.

According to the new graph, risks to 'unique and threatened systems' such as coral reefs and risks of extreme weather events become likely when temperatures rise by as little as 1.8 degrees F from 1990 levels, which is on course to occur by mid-century given the current concentrations of atmospheric greenhouse gases. In addition, risks of negative consequences such as increased droughts and the complete melting of ice caps in Greenland and Antarctica definitively outweigh any potential positives, such as longer growing seasons in countries such as Canada and Russia.

'We're definitely going to overshoot some of these temperatures where we see these very large vulnerabilities manifest,' says economist Gary Yohe of Wesleyan University in Middletown, Conn., another co-author. 'We're going to have to learn how to adapt.' Adaptation notwithstanding, Yohe and Schneider say that scientists must also figure out a way to reduce greenhouse gas emissions to reverse the heating trend to prevent further damage.

Several bills pending in Congress would set a so-called cap-and-trade policy under which an overall limit on pollution would be set — and companies with low output could sell their allowances to those that fail to cut emissions as long as the total stays

within the total pollution cap. Any such federal policy would put a price on carbon dioxide pollution, which is currently free to vent into the atmosphere, Yohe note. He, however, favours a so-called carbon tax that would set a fixed price for such climate-changing pollution rather than the cap-and-trade proposals favoured by the Obama administration. 'It's a predictable price, not a thing that bounces around.'

But even with such policies in place — not only in the U.S. but across the globe — climate change is a foregone conclusion. Global average temperatures have already risen by at least 1.1 degrees Fahrenheit (0.6 degree C) and further warming of at least 0.7 degree F (0.4 degree C) is virtually certain, according to the IPCC. And a host of studies, including a recent one from the Massachusetts Institute of Technology, have shown that global warming is already worse than predicted even a few years ago. The question is: 'Will it be catastrophic or not?' 'We've dawdled, and if we dawdle more, it will get even worse,' Schneider says. 'It's time to move.'

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 The current temperature change

A) is less than it was predicted.
B) is too little to cause any concern.
C) makes natural disasters more probable.
D) has caused the catastrophic climate change.

22 Global warming has

A) only negative consequences.
B) only positive consequences.
C) more negative than positive consequences.
D) more positive than negative consequences.

23 Cap-and-trade policy implies that

A) companies will have to cut their emissions.
B) companies could sell their emissions.
C) the overall amount of emissions must stay within a certain limit.
D) companies will have to pay a fixed carbon tax.

24 According to the IPCC, global warming

A) is no worse than predicted a few years ago.
B) will have catastrophic effect.
C) is still uncertain.
D) is inevitable.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 The risk of catastrophic climate change is increasing.

A) True
B) False
C) Not Given

26 The European heatwave of 2003 caused the deaths of more than 50,000 people.

A) True
B) False
C) Not Given

27 The initial version of the "burning embers" graph showed that climate risks had already begun before 1990.

A) True
B) False
C) Not Given

28 According to the updated graph, risks to coral reefs become likely with a temperature rise of at least 2.0 degrees F.

A) True
B) False
C) Not Given

29 The IPCC predicts that global average temperatures will rise by at least 1.8 degrees F in the future.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE PERSUADERS

We spend more time in them than we mean to, we buy 75 percent of our food from them and end up with products that we did not realize we wanted. Right from the start, supermarkets have been ahead of the game. For example, when Sainsbury introduced shopping baskets into its 1950s stores, it was a stroke of marketing genius. Now shoppers could browse and pick up items they previously would have ignored. Soon after came trolleys, and just as new roads attract more traffic, the same applied to trolley space. Pro Merlin Stone, IBM Professor of Relationship Marketing at Bristol Business School, says aisles are laid out to maximize profits. Stores pander to our money-rich, time-poor lifestyle. Low turnover products — clothes and electrical goods — are stocked at the back while high-turnover items command position at the front.

Stone believes supermarkets work hard to "stall" us because the more time we spend in them, the more we buy. Thus, great efforts are made to make the environment pleasant. Stores play music to relax us and some even pipe air from the in-store bakery around the shop. In the USA, fake aromas are sometimes used. The smell is both the most evocative and subliminal sense. In experiments, pleasant smells are effective in increasing our spending. A casino that fragranced only half its premise saw profit soar in the aroma-filled areas. The other success story from the supermarkets' perspective is the loyalty card. Punters may assume that they are being rewarded for their fidelity, but all the while they are trading information about their shopping habits. Loyal shoppers could be paying 30% more by sticking to their favourite shops for essential cosmetics.

No matter how savvy we think we are to their ploys, the ad industry still wins. Adverts focus on what products do or on how they make us feel. Researcher Laurette Dube, in the Journal of Advertising Research, says when attitudes are base on "cognitive foundations" (logical reasoning), advertisers use informative appeals. This works for products with a little emotional draw but high functionality, such as bleach. Where attitude is based on effect (i.e. emotions), ad teams try to tap into our feelings. Researchers at the University of Florida recently concluded that our emotional responses to adverts dominate over "cognition".

Advertisers play on our need to be safe (commercials for insurance), to belong (make a customer feel they are in the group in fashion ads) and for self-esteem (aspirational adverts). With time and space at a premium, celebrities are often used as a quick way of meeting these needs — either because the celeb epitomizes success or because they seem familiar and so make the product seem "safe". A survey of 4,000 campaigns found ads with celebs were 10 percent more effective than without. Humor also stimulates a rapid emotional response. Heiman Chung, writing in the International Journal of Advertising, found that funny ads were remembered for longer than straight ones. Combine humor with sexual imagery — as in Wonderbra's "Hello Boys" ads — and you are on to a winner.

Probably all of us could make a sale if the product was something we truly believed in, but professional salespeople are in a different league — the best of them can always sell different items to suitable customers in the best time. They do this by using very basic psychological techniques. Stripped to its simplest level, selling works by heightening the buyer's perception of how much they need a product or service. Buyers normally have certain requirements by which they will judge the suitability of a product. The seller, therefore, attempts to tease out what these conditions are and then explains how their products' benefit can meet these requirements.

Richard Hession, author of Be a Great Salesperson says it is human nature to prefer to speak rather listen, and good salespeople pander to this. They ask punters about their needs and offer to work with them to achieve their objectives. As a result, the buyer feels they are receiving a "consultation" rather than a sales pitch. All the while, the salesperson presents with a demeanour that takes it for granted that the sale will be made. Never will the words "if you buy" be used, but rather "when you buy".

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Trolleys are born for the increasing traffic in the supermarket. The width of **30** _____ in supermarkets is broadened in order to generate the most profits. Research from **31** _____, satisfying aromas can motivate people to buy more products. Except for the effort of creating a comfortable surrounding, loyalty card is another card that supermarkets play to reward their regular customers. For example, loyal customers spend 30% more in their loved shops for everyday necessary **32** _____. Clothes shops use advertisements to make the buyer think they are belonging to part of a **33** _____; research from 4,000 campaigns reflect that humor advertisement received more emotional respect.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **What is the supermarket's purpose of using "basket" in paragraph A?**

A) Create a convenient atmosphere of supermarket
B) Make customers spend more time on shopping
C) Relieve pressure on the supermarket's traffic
D) More than half items bought need to be carried

35 **What's the opinion of Richard Hession?**

A) Pretend to be a consultant for customers
B) Prefer to speak a lot to customers
C) Help buyers to choose their items
D) Show great example for people

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

TARRA AND BELLA

There is a place in Tennessee where old elephants go to live. Each elephant has a best friend there. Most of these friends are other elephants. But an elephant named Tarra chose a dog for her best **Q1**_____! Tarra and the **Q2**_____, Bella, go everywhere together. The two friends eat together. They sleep together, too.

One day, Tarra hurt her back. She needed to rest. She rested inside the office of the people who care for the **Q3**_____ She rested for three weeks. She rested until her back was better. While Tarra **Q4**_____, Bella stood by a gate outside the office. She stood and stood. The nice people carried Bella out to see Tarra. Bella's tail wagged. The two friends visited every day until Tarra's **Q5**_____ got well again. Tarra and Bella are **Q6**_____ again. To show her love, the elephant pets Bella's head with her great big foot!

PART 2

Questions 7–11

Read the texts 7-11 and the statements A-G. Decide which statement (A-G) matches the situation described in each text. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

7

The Ship Hotel — Douglas Bay's 15th Century Hotel. All rooms en-suite. All rooms with sea view. Restaurant. Bar. Buffet every Sunday. Traditional home-cooked food. Real local ales. Harbour Street, Douglas. Tel: 01779 413562

8

BAY VIEW HOUSE Bed and Breakfast. Located on the sea front. 10 rooms all en-suite. All rooms with TV. Comfortable modern house. The Esplanade, Dawes Bay. Tel: 01893 367267

9

GARRET FOREST HOTEL — COUNTRYSIDE RESORT. 86 Bedrooms. Self-catering available. 3 bars. 4 Restaurants. Indoor swimming pool. Tennis courts. Games room. Situated in a beautiful forest. 15 minutes drive to the coast. Garret Forest, Nr Felton. Phone: 01788 412412

10

The Dawes Valley Inn. Elegant and comfortable rooms in a historic inn overlooking the Dawes Valley. Traditional hospitality. Renovated en-suite rooms. Breakfast and lunch included. Beautiful views. Tel: 01891 502688

11

The Clifton Hotel — Hotel and Conference Centre. 75 Rooms with bathroom and air conditioning. 4 Function Rooms. Fine dining restaurant open to the public. Fitness Centre. 18-Hole Golf Course. Tel: 01744 337799

A) You want to stay in a hotel with ping pong and billiard facilities.

B) You need a hotel near the bay with the facility to watch the latest news.

C) You want to stay in a hotel with rooms with cooling systems and be able to practice golf.

D) You want to stay in a historical hotel with the facility to have home-made meals.

E) You want to cook yourself in a hotel and play different games.

F) You want to stay in a hotel with mountain views and do swimming activities.

G) You want to stay in a historical hotel with free breakfast.

PART 3

Questions 12–17

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Ads with wings
B) Quick reaction
C) Unexpected prize
D) Training the mind
E) Losing control
F) Chemistry in tennis
G) Welsh roots
H) Too fast

12. Paragraph I **13. Paragraph II** **14. Paragraph III**
15. Paragraph IV **16. Paragraph V** **17. Paragraph VI**

LIST OF HEADINGS

I. By now Wimbledon has become a popular national festival, together with Ascot and the Cup Final. Many people in Britain don't know that tennis was first played in Wales. It was there, in 1873, that Major Walter Wingfield played a game with the recently invented rubber balls and enjoyed it so much that he decided to develop the standards of the game. He published the

first book of tennis rules later that year. The first Wimbledon championship was held a few years later in 1877 and the British Lawn Tennis Association formed in 1888.

II. Good mental preparation is necessary for professional tennis players. In a long match they can be on the court for several hours with nobody to talk to. There can be hundreds of stops from the crowd, their and, especially at Wimbledon, the rain. Players need to practice methods for improving their concentration and for motivating themselves when the game is going against them. They are often taught to imagine situations, such as a tense tie-break. Then they imagine what to do with it some opponent.

III. Many players find it impossible to stay calm in the stressful situation of a long tennis match and let their temper out. John McEnroe was famous for his quarrels with referees. Several players have been given warnings for throwing the racket or swearing. Some players lose matches they could easily win because their mind lets them down. Pat Rafter said that he couldn't breathe in his 2000 Wimbledon final. The stress of being near the victory can be too much for a person.

IV. The power of today's tennis game is only partly created by the athletes themselves. Much of it comes from their rackets. New designs mean players can hit the ball with more speed and accuracy than ever before. It started in the 1970s when the traditional wooden racket was replaced with metal. Since then different materials have been used. Graphite has made the biggest influence. Now the graphite can be mixed with materials such as boron and titanium to produce even stronger, and lighter, rackets.

V. Speed isn't always a good thing. Many fans are complaining that the speed of the game is making tennis boring to watch. After two years of testing, a new ball has now been invented which could slow down tennis and make it more exciting to watch. The ball is put together in exactly the same way as the one used now, but is 6% larger in diameter. The bigger ball gives the receiver 10% more reaction time in which to return the serve. So the number of aces — serves in a match that the receiver fails to return — will be far fewer.

VI. When Irishman John Boland travelled to Athens for the first modern Olympic Games in 1896, he had no idea he would return home with the gold medal in tennis. But then, he had no idea he would compete either — he went to watch the competition. In comparison, today's Olympic tennis players include some of the best athletes in the world. They are used to five-star hotels and hundreds of thousands of dollars, but at the Olympic Games they will stay in the Olympic Village and compete for nothing but a gold medal.

PART 4 — Questions 18–26

Read the following text for questions 18-26.

FATHERHOOD TODAY

MODERN men see fatherhood as their biggest life-changing experience and desperately want to be 'hands on' during their partner's pregnancy and the upbringing of their child. The days of fatherhood being limited to discipline and breadwinning look to be long gone, as a third of today's dads say they would even consider leaving work to take on the role of full-time father. But despite being anxious about the birth of their child, men are more worried about money than losing their freedom.

The results of *Pregnancy & Births* magazine's annual fatherhood survey reveal the respect with which many men now regard the role of fatherhood. More than 2,000 couples across the UK who were expecting their first child were asked about their feelings. According to 98% of the fathers-to-be, they believe fatherhood will make them happy and 90% say it is their biggest life-changing event ever. It seems that men are taking childrearing seriously, wanting to be 'hands on' both before and after birth. Nine out of ten dads-to-be attend scans and check-ups; only 2% of the men surveyed would not be at the birth because they "could not face it". Eight out of 10 women say their partner is more caring during the pregnancy and 83% of men would rather stay in with their partner than go out with friends. 72% of men say they will take two weeks' leave. A further 77% say they wish they could have more time off to bond with their baby.

However, more than half of the men questioned still think that the mother should take time off work if the child is ill, but 39% said they would share it. Modern fathers-to-be are also more likely to do chores compared to decades ago: almost half of them do more housework, 41% do more meal preparation and a third go shopping more. The role of child rearing has changed dramatically over the past 50 years and more men would consider leaving work to raise their child. A third of the men surveyed say they would be prepared to be a full-time stay-at-home dad, another third would like to work part-time while the rest wish to continue with work.

Dr. Maureen Marks, a specialist psychiatrist on fathers and their changing roles, does not believe the survey sample is wide enough. But she agrees that men's parental roles have changed dramatically. Dr. Marks, a senior lecturer at the Institute of Psychiatry, King's College London, said, "Generally speaking, men are more able to be involved. As women are working more, they are not totally dependent on their husbands for money, so the roles are less rigid." She believes that, although the roles have been modified, biological differences are important. "Women are the ones who carry the child and many breast-feed. In those early days, however involved the father is, they miss that connection," she said. However, men make up for this when the child is old enough to be played with. "Men are much more active when playing with their children and encourage their sociability, but when children need comforting or soothing they tend to go to their mother."

Tom Beardshaw, from the charity Fathers Direct, believes these results confirm society's changing views on fatherhood. He said, "This confirms the equal opportunities research which shocked a lot of people by how much fathers want to get involved. There are historical changes such as women working more, and also positive male role models, such as George Clooney, who show that being a proud father is not an unmanly attribute to have."

For questions 18-21, choose the correct answer A, B, C or D.

18 Several modern fathers

A) are willing to give up their careers to be stay-at-home parents.
B) think fatherhood provides discipline in their lives.
C) would feel afraid of not being able to raise a child.
D) are working hard to save money for the future.

19 **According to the article, a majority of men today**

A) still do not want to attend the birth of their children.
B) take an active part in pre-natal care.
C) wish they could afford to have leave when a child is born.
D) do not wish to have a child.

20 **If a child were ill, most of the men questioned said**

A) either partner could stay with the child.
B) the mother should take time off work.
C) they would stay off work themselves.
D) the children themselves would get well.

21 **Dr. Marks comments that**

A) both parents need to take equal time with their newborn baby.
B) children don't care which parent is around when they are upset.
C) traditional roles for parenting has changed.
D) the role of fathers must be changed.

For questions 22-26, decide if the following statements agree with the information given in the text.

22 **According to the Pregnancy & Birth magazine survey, three-quarters of the respondents think there is no more important event that changes their life than having their first child.**

A) True
B) False
C) Not Given

23 **The fathers who are expecting a new birth tend to do as much housework today as they did ten years ago.**

A) True
B) False
C) Not Given

24 **According to Dr. Maureen Marks, the survey's outcome cannot help us reach a reliable conclusion.**

A) True
B) False
C) Not Given

25 **Men and women are equally good at boosting children's social skills.**

A) True
B) False
C) Not Given

26 **Working mothers are worse at child upbringing than the one who doesn't work.**

A) True
B) False
C) Not Given

PART 5 Questions 27–32

Read the following text for questions 27-32.

LOST CIVILIZATION OF PERU

Two thousand years ago, a mysterious and little-known civilization ruled the northern coast of Peru. Its people were called the Moche. They built huge and bizarre pyramids that still dominate the surrounding countryside — some well over a hundred feet tall. Many are so heavily eroded they look like natural hills. Only close up can you see they are made up of millions of mud bricks. Several of the pyramids, known as 'huacas', contain rich collections of murals depicting both secular and sacred scenes from the Moche world. Others house the elaborate tombs of Moche leaders.

Out in the desert, archaeologists have also found the 2,000-year-old remains of an extensive system of mud brick aqueducts which enabled the Moche to tame their desert environment. Many are still in use today. As archaeologists have excavated at Moche sites they've unearthed some of the most fabulous pottery and jewelry ever to emerge from an ancient civilization. The Moche were pioneers of metal-working techniques like gilding and early forms of soldering. These skills enabled them to create extraordinarily intricate artifacts: ear studs and necklaces, nose rings and helmets, many heavily inlaid with gold and precious stones.

But it was the pottery that gave the archaeologists their first real insight into Moche life. The Moche left no written record but they did leave a fabulous account of their life and times in paintings on pots and vessels. Many show everyday events and objects such as people, fish, birds, and other animals. Others show scenes from what, at first sight, look like a series of battles. But as the archaeologists studied them more closely they realized they weren't ordinary battles: all the soldiers have dressed alike; the same images were repeated time and again. When the battle was won, the vanquished were ritually sacrificed. It was, the archaeologists slowly realized, a story not of war but ritual combat followed by human sacrifice.

But what did it mean? The first breakthrough came when Canadian archaeologist Dr. Steve Bourget, of the University of Texas in Austin, discovered a collection of bones at one of the most important Moche huacas. Many of the skeletons were deeply encased in mud which meant the burials had to have taken place in the rain. Yet in this part of Peru, it almost never rains. Bourget realized there had to be a deliberate connection between the rain and the sacrifices. It led him to a new insight into the Moche world. The Moche, like most desert societies, had practiced a form of the ritual designed to celebrate or encourage rain. The sacrifices were about making an unpredictable world more predictable. A harsh environment had molded a harsh civilization with an elaborate set of rituals designed to ensure its survival.

These discoveries answered one question — what the painted scenes were all about — but still left a central riddle. Why had Moche society finally collapsed? Clues came first from climate researchers gathering evidence of the region's climatic history, which suggested that at around AD 560 to AD 650 there was a thirty-year period of exceptionally wet weather, followed by a severe drought lasting another thirty years.

In the late 1990s, American archaeologist Dr. Tom Dillehay revisited some of the more obscure Moche sites and found that the dates didn't match the climate catastrophe explanation. Many of these settlements were later than AD 650, so clearly, the weather hadn't been the immediate cause of their demise. He also found that, instead of constructing huge huacas, the Moche had started building fortresses. They had been at war. But who with? Searching the site for clues, Dillehay's team were unable to find any non-Moche military artifacts. It could only mean one thing: the Moche had been fighting amongst themselves.

For questions 27-30, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

Many Moche **27** _____ that helped to water the land are working today.

Dr. Steve Bourget found graves in which people were buried during the **28** _____.

Dillehay found evidence that Moche society had survived beyond **29** _____.

The first evidence of military activity was the discovery of **30** _____

For questions 31-32, choose the correct answer A, B, C, or D.

31 **In some huacas**

A) Moche leaders still live.
B) there are a huge collection of gold and silver treasures.
C) chiefs were buried.
D) leaders built their houses.

32 **Pottery designs**

A) show armed fighting and the practice of killing people within Moche society.
B) had scenes of the Moche fighting foreign armies.
C) illustrate common agricultural practices in Moche society.
D) are decorated with texts in Moche language.

Best Ferry Prices — Widest Choice. Calais 5 day return from £99. Holland 5 day return from £129. Dieppe 5 day return from £119. Paris 10 day return £240. Book by 18th June 2004 — Ferrysavers.com

A) You would like to book a cruise for 2005 — to enjoy big savings you must book early.

B) You would like to spend a week on an island holiday.

C) You would like to travel to France and return 10 days later.

D) You want to travel to China on ferry.

E) You would like to go to Italy for a long-weekend.

F) You are travelling to Spain by car and decide it would be best to be across the Channel by early morning.

G) You would like to take your partner to Paris for a weekend city break.

H) You would like to go on holiday to Germany taking your car.

I) You are planning to travel to Sahara Desert.

J) You would like to have a holiday in Ireland this summer.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Changing Habits
B) Eating Out
C) Foreign Food
D) Diet Dangers
E) Popular but Useless
F) Plan Your Diet Carefully
G) Eating Together
H) Food Safety

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

LIST OF HEADINGS

I. A quick look at junk food facts tells us junk food and diets do not go hand in hand. Junk foods are also called 'empty calorie' foods and have no nutritional value. Nevertheless, they are enjoyed by lots of people because of their simplicity to manufacture, consume and, of course, their taste. Chocolates, burgers, pizzas, potato wafers and fries will surely find their way into everyone's heart.

II. Thai cuisine is one of the healthiest foods you can eat. In fact, several Thai dishes, such as Tom Yum Soup, are currently under scientific study for their incredible health benefits. Of course, it's already known that many of the fresh herbs and spices used in Thai cooking — such as turmeric, galangal, coriander, lemongrass, and fresh chillies — have immune-boosting and disease-fighting power.

III. Vegetarian diets can be very healthy, but eating a balanced diet when you are vegetarian usually requires a little extra attention. Because vegetarians eliminate certain foods from their diets, they often need to work to add foods into their diet that will provide the nutrients found in meat products. If properly planned, vegetarian diets can provide all the nutrients you need.

IV. It's actually easy to make good choices at a fast-food restaurant or the cafeteria. Most cafeterias and fast-food places offer healthy choices that are also tasty, like grilled chicken or salads. Be mindful of portion sizes and high fat add-ons, like dressings, sauces or cheese. Most restaurant portions are larger than the average serving of food at home. Ask for half portions or take half of your dish home.

V. Family meals are making a comeback. Shared family meals are more likely to be nutritious, and people who eat regularly with their families are less likely to snack on unhealthy foods and more likely to eat fruits and vegetables. Teens who take part in regular family meals are less likely to smoke, drink alcohol, or use drugs. Beyond health and nutrition, family meals provide a valuable opportunity to reconnect.

VI. Families are cooking more meals at home, cutting back on take away in the face of the economic downturn. In addition to cutting back on take away and eating out, families have begun cooking more vegetarian meals and are adding vegetables, lentils and baked beans to allow them to cut back on meat quantity. Consumers also indicate that they are likely to prepare meals that can be spread across more than one mealtime.

PART 4

Questions 21–29

Read the following text for questions 21-29.

DISPOSABLE CLOTHING & THE 'BUY NOTHING' TREND

Social media, magazines and shop windows bombard people daily with things to buy, and British consumers are buying more clothes and shoes than ever before. Online shopping means it is easy for customers to buy without thinking, while major brands offer such cheap clothes that they can be treated like disposable items - worn two or three times and then thrown away. In Britain, the average person spends more than £1,000 on new clothes a year, which is around four per cent of their income. That might not sound like much, but that figure hides two far more worrying trends for society and for the environment. First, a lot of that consumer spending is via credit cards. British people currently owe approximately £670 per adult to credit card companies. That's 66 per cent of the average wardrobe budget. Also, not only are people spending money they don't have, they're using it to buy things they don't need. Britain throws away 300,000 tons of clothing a year, most of which goes into landfill sites.

People might not realize they are part of the disposable clothing problem because they donate their unwanted clothes to charities. But charity shops can't sell all those unwanted clothes. 'Fast fashion' goes out of fashion as quickly as it came in and is often too poor quality to recycle; people don't want to buy it second-hand. Huge quantities end up being thrown away, and a lot of clothes that charities can't sell are sent abroad, causing even more economic and environmental problems.

However, a different trend is springing up in opposition to consumerism - the 'buy nothing' trend. The idea originated in Canada in the early 1990s and then moved to the US, where it became a rejection of the overspending and overconsumption of Black Friday and Cyber Monday during Thanksgiving weekend. On Buy Nothing Day people organize various types of protests and cut up their credit cards. Throughout the year, Buy Nothing groups organize the exchange and repair of items they already own. The trend has now reached influencers on social media who usually share Posts of clothing and make-up that they recommend for people to buy. Some YouTube stars now encourage their viewers not to buy anything at all for periods as long as a year. Two friends in Canada spent a year working towards buying only food. For the first three months they learned how to live without buying electrical goods, clothes or things for the house. For the next stage, they gave up services, for example haircuts, eating out at restaurants or buying petrol for their cars. In one year, they'd saved $55,000. The changes they made meant two fewer cars on the roads, a reduction in plastic and paper packaging and a positive impact on the environment from all the energy saved. If everyone followed a similar plan, the results would be impressive. But even if you can't manage a full year without going shopping, you can participate in the anti-consumerist movement by refusing to buy things you don't need. Buy Nothing groups send a clear message

to companies that people are no longer willing to accept the environmental and human cost of overconsumption.

For questions 21-24, choose the correct answer A, B, C or D.

21 How much income do the Britons spend on buying clothes on average every year?

A) more than a half
B) majority
C) none
D) less than a tenth

22 Which is not mentioned in the text as a worrying British lifestyle?

A) They spend on items that are beyond their budget.
B) They send on clothes that they don't need actually.
C) They drop too many clothes into the rubbish.
D) They wear clothes until they are too old to wear.

23 What is the idea behind the 'buy nothing' trend?

A) stop purchasing completely
B) prevent excessive spending on shopping
C) ban Block Friday shopping offers
D) stop getting loans from credit companies

24 What do Nothing groups tell production companies?

A) People are against damage to nature and society because of consumerism.
B) People don't want to spend much money on items.
C) Online shopping will replace traditional shops.
D) Companies should not generate too much rubbish.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 People buy clothes because they want to throw them away.

A) True
B) False
C) Not Given

26 The amount the average Briton owes on credit cards is one-third of the amount they spend on clothes each year.

A) True
B) False
C) Not Given

27 Charities can find ways to use clothes even if they are not very good quality.

A) True
B) False
C) Not Given

28 Buy Nothing Day is popular only in the UK.

A) True
B) False
C) Not Given

29 If everyone followed the Buy Nothing idea, the environment would benefit.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

ELEPHANTS' EARLY WARNING SYSTEM

Few sights in nature are as awesome as a six-ton elephant guarding her baby from a hungry predator. Rather than retreat, the threatened mother is likely to launch a mock charge — a terrifying display of ground stomping, ear flapping and frantic screaming designed to frighten off lions and hyenas.

But elephant researchers have discovered that there is more to a mock charge than meets the eye. According to a new study in the Journal of the Acoustical Society of America (JASA), foot stomping and low-frequency rumbling also generate seismic waves in the ground that can travel nearly 20 miles along the surface of the earth. More astonishing is the discovery that elephants may be able to sense these vibrations and interpret them as warning signals of a distant danger.

'Elephants may be able to detect stress from a herd many miles away,' says Caitlin O'Connell-Rodwell, an affiliate of the Stanford Centre for Conservation Biology. 'They may be communicating at much farther distances than we thought,' adds O'Connell-Rodwell, author of the JASA study.

In the early 1990s, O'Connell-Rodwell began to suspect there was more to long-distance elephant communication than airborne rumblings alone. 'I started working with elephants in Etosha National Park in 1992,' she recalls. 'I was observing them at a drinking hole when I noticed this strange set of behaviours. They would lean forward, pick up one leg and freeze — or begin stomping their feet for no apparent reason.' She theorized that the elephants were responding to vibrations in the ground from approaching herds. 'When I returned to the University of California at Davis, I teamed up with my Ph.D. adviser, Lynette Hart, and geophysicist Byron Aranson to find out if there really are seismic communications among elephants,' she says.

To test the theory that elephants transmit and receive underground messages, O'Connell-Rodwell and her colleagues conducted several experiments with elephants in Africa, India and at a captive elephant facility in Texas, USA. 'We went to Etosha National Park in Namibia and recorded three acoustic calls commonly made by wild African elephants,' she says. 'One is a warning call, another is a greeting and the third is the elephant equivalent of Let us go.'

The researchers wanted to find out if elephants would respond to recordings played through the ground; so they installed seismic transmitters at a tourist facility in Zimbabwe where eight trained, juvenile elephants were housed. The idea was to convert audible 'Greetings!', 'Warning!' and 'Let us go!' calls into underground seismic waves that an elephant could feel but not hear directly through the air. 'We used a mix of elephant calls, synthesized low-frequency tones, rock music and silence for comparison,' says O'Connell-Rodwell. 'When the Warning calls were played, one elephant got so agitated that she bent down and bit the ground,' she notes. 'That is very unusual behaviour for an elephant, but it has been observed in the wild under conditions of extreme agitation. The juvenile elephant had the same agitated response each time the experiment was repeated.

Researchers also played recorded calls to seven captive males. 'The bulls reacted too, but their response was much more

subtle,' notes O'Connell-Rodwell. 'We think they are sensing these underground vibrations through their feet,' she adds. 'Seismic waves could travel from their toe nails to the ear via bone conduction.'

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

According to newly published findings, by stomping their feet, elephants tend to send a **30** _____ message to other elephants in the distance.

O'Connell-Rodwell wanted to study elephants further because she witnessed unusual **31** _____ of these giant animals.

When warning calls were played in the experiment, an elephant bit the ground, which case was **32** _____ before, but when they had agitated extremely.

The scientists hypothesized that elephants use their **33** _____ to detect the vibrations.

For questions 34-35, choose the correct answer A, B, C, or D.

34 According to newly published findings

A) a mother elephant uses a mock charge to protect her young.
B) a mother elephant is unable to defend her young from lions.
C) an elephant's mock charge is not simply a loud noise.
D) an elephant can create a louder noise by stomping its foot than with its call.

35 The elephants Caitlin saw in 1992 were acting strangely because

A) they were not drinking from the waterhole.
B) they were moving their feet constantly.
C) they made acoustic calls to another heard.
D) occasionally, they would raise a leg and stay very still.

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the texts. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

WHAT'S IN A NAME

When naming a child, some parents seem to choose a name based simply on their personal preference. In other families, grandparents or professional name-makers come up with a child's name. And in some cases, the time of a child's birth influences how the child's **Q1**_____ is determined. In many European cultures, names are typically chosen by parents. Parents' choice for their child's name may be based on names of relatives or ancestors within their particular **Q2**_____. For example, in Italy, children are traditionally named after their grandparents. The **Q3**_____ generally use the father's parents' names first. If they have more children, then they will use the mother's parents' names. Similarly, some people in Eastern Europe name their children after relatives who have died. This tradition is seen as a means to protect the child from the Angel of Death.

Traditionally in some Asian countries, a child's grandfather or a fortune-teller chooses the child's name. In contrast to the **Q4** _____ of naming children after relatives, the child's name is chosen to influence the child's character. For example, names may be based on a connection to certain elements such as fire, water, earth, wood, or metal. Or the name might include a written character meaning beauty, strength, or kindness. In certain African cultures, when a child is born plays a large part in determining the child's name. In Ghana's Akan **Q5**_____ the day a child is born determines the child's name. But each day has different names for boys and girls. For instance, a **Q6** _____ born on Friday is named Kofi, whereas a girl born on the same day is named Afua. Both Kofi and Afua are names meaning 'wanderer' or 'explorer.' Children with these names are seen as travelers. No matter where the name comes from, a child's name is the first gift in life. Whether it is chosen according to preference or dictated by tradition, the name reflects something about a child's culture. For that reason, all names should be treasured and respected.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which situation described in the statements matches with each text. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

7

THE HARBOUR VIEW HOTEL — Tourist Board *** $100 PER PERSON PER NIGHT. Tours arranged. Private car park. Restaurant. All bedrooms en suite. Short bus ride from Sydney City Centre. Parties catered for. For reservations call: Tel: 0264125883

8

SUNRISE GUEST HOUSE — 1 STAR HOTEL. $49.99 Double room shared bathroom. 15 mins from beach. On bus route to City Centre. Surf equipment hire available. Modestly priced restaurant. Tel: 0241136386

9

SYDNEY'S BEST ACCOMODATION AGENCY — We can arrange all your needs for accommodation from budget to five star. Call: 0241523116. Or check our website at: www.stayinoz.com

10

THE ROYALE HOTEL — Sydney's most famous hotel. High class luxury rooms from $250 a night. All airport transfers arranged. 4 different restaurants. Private beach. 2 swimming pools. Functions arranged. For the luxury stay of a lifetime, call: Tel: 0241730938

11

SYDNEY YOUTH HOSTEL — ONLY $25 PER NIGHT! Dormitory sleeping. Shared bathrooms. Cheap restaurant. Television room. Travel advice. No Booking. 35 Gold Street Sydney. Just turn up. Tel: 0286141738. Rated 1* hotel

12

Golden Sands Beach Club — For only $150 a night. Golden beaches in Mallorca. Enjoy swimming activities in the Mediterranean. Take trips near villages. Enjoy shows and make friends. All meals and drinks are included in the price. Tel: 00679558

13

Seaview Hotel — Enjoy your time at wonderful, small luxury hotel in Spain. Prices include facilities: a swimming pool, tennis court and a gym. We organize trips to plays and concerts in the evenings. Beach is close to sit quietly and relax or read.

14

Hotel on the sea — Enjoy two weeks of luxury on this cruise around the Mediterranean visiting seven popular destinations. Relax in the sunshine by the ship's swimming pool. You won't get bored, as there are cinemas, tennis courts and a theatre on board, plus plenty of social activities in the evening. Tel: 665923258

A) You cannot make an advanced reservation for this hotel.

B) You must pay a bit more but can stay in a luxury room.

C) You don't have to pay for food and beverages if you stay in this hotel.

D) You can go on safari trips there.

E) You can stay in only one type of bedroom there.

F) Which advertisement is NOT for a hotel?

G) You don't pay for recreation facilities in this hotel.

H) This hotel takes you to many cities.

I) Hotel managers are all multilingual.

J) You can rent swimming equipment in this hotel.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Behind the Wheel
B) Pessimistic Predictions
C) Intelligent House
D) New Possibilities for Business
E) Permanent People
F) Greenhouse Effect
G) Easy Shopping
H) Future Entertainment

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

LIST OF HEADINGS

I. The smart fridge will be connected to the Internet as part of a home network that runs your domestic life, interacting with the barcodes on your food, and reordering them online as you use them. Virtually all domestic appliances will be linked by computer, so that the fridge can communicate with the cooker and rubbish bin, coordinating complex tasks such as cooking a meal.

II. Children of the future will never be able to complain that there's no one to play with. Equipped with virtual reality headsets, they will be taking part in global games, for example, in medieval jousting tournaments. Their opponents, selected by the computer, will probably live on the other side of the world.

III. Cars of the future will take much of the strain out of driving. The intelligent navigation system will be able to choose the best route for you by monitoring an online traffic database for holdups, while the cruise control keeps a constant distance from the car in front. And if you exceed the speed limit, the speedometer will give a polite warning to you.

IV. Holographic conferencing and virtual reality meetings will allow people to interact with colleagues and clients via computer, without needing to leave the comfort of their own homes. This will also mean that a lot more people will either work freelance from home, or on flexible short-term contracts. The old concept 'jobs for life' will be a thing of the past.

V. In the future it will become harder to tell the difference between the human and the machine. All body parts will be replaceable. A computer will function like the human brain with the ability to recognize feelings and respond in a feeling way. We will then be able to create a machine duplicate of ourselves and transfer our spirit so we will be able to live for as long as we want.

VI. There will be great changes to the environment particularly because of the rising sea levels. Global warming is expected to cause oceans to rise by one meter, which will increase the risk of flooding. It will happen regardless of any future actions to curb greenhouse gases. Projected climate change will also tend to degrade water quality through higher water temperatures.

PART 4

Questions 21–29

Read the following text for questions 21-29.

INTERNET SAFETY ISSUES

The fact is that 93 percent of kids are online. Even if parents limit or ban internet access, kids have access at school, through a friend's smart phone, libraries, and schools. The internet is a tool that our children need to use and master with wisdom dispensed by parents. We need tech-savvy youth who will grow up to be leaders of the community. Many schools use web sites such as EdModo to connect students and teachers.

My friend Reem is the vice principal of an Islamic School. She says that many teachers assign work from school that children need to research online. Some of the best homeschooling resources are online. Far too many parents do not allow their children monitored access to the internet, leading to two scenarios. Their children end up lying and using it behind their back; or are so sheltered that they do not know how to conduct themselves online when they finally do get access. On the other hand, more often than not, there are parents who freely give unmonitored access. But caretakers raising children in today's world need to think about several issues:

- How does a parent know if his/her child is engaging in inappropriate Internet activities?
- How would a parent know if his/her child is cyber-bullied if he or she does not tell them?

According to Common Sense Media, 'Young teens don't yet have an off switch in their brains. That means that they often act impulsively. This lack of impulse control, combined with online anonymity, could lead toward dangerous behaviors: cyber-bullying, inappropriate photo or video uploads, illegal downloads, meeting strangers — even cheating. Because socializing is so important to young people, online interactions can become pretty intense — whether they're playing games, chatting with friends, or sharing work.' Using open communication and thoughtful intervention, parents can help their wired offspring learn how to maneuver electronic gadgets and the World Wide Web. Here are some tips on how to give children monitored access to the Internet:

- spend time with your children online.
- ask to see their Facebook page, their Instagrams, and Twitter feed.

It may seem like a foreign territory, but it is imperative that parents talk to their children about social media. At this stage, it is not our job to try to protect them by isolating them. It is our job to teach them how to deal with information and with people.

- younger children often play on websites such as Movie Star Planet, Moshi Monsters, and new ones pop up every day. Most of these sites teach extreme consumerism as children

play to accumulate points or currency and use it to 'buy' stuff: furniture, VIP passes, etc.; urging your child to become 'Rich and Famous.' As responsible parents, we need to prevent children from becoming mindless consumers. If you do allow your child to visit these sites, then watch them while they play

- teach them not to talk to or chat with random strangers. That person with a name Girlie45 could, possibly, be a middle-aged predator. Teach them that everything that they put online is there forever. Anyone can cut, copy and paste pictures and text. Teach them how to be safe online because today it is as important as safety basics about locking the door or not playing with matches.

For questions 21-24, choose the correct answer A, B, C, or D.

21 What does the author think about the educational value of prohibiting children from the internet?

A) It is useless.
B) It is important.
C) It is effective.
D) It is advisable.

22 What way of using the internet in education does the author mention (paragraph 2)?

A) Finding ready-made research papers.
B) Online instruction by the school administration.
C) Communication platform for teachers and students.
D) Teaching from home.

23 According to the text, the best way to protect children from internet hazards is to..

A) monitor their accounts on social networks.
B) follow them online.
C) ban them from using social networks.
D) limit their access to the computer.

24 The danger of online games is, according to the author, in...

A) the possibility of losing one's money.
B) availability of VIP passes.
C) getting used to spending money easily.
D) their accessibility.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 Some schools have a special system that allows students and teachers make communication with each other.

A) True
B) False
C) Not Given

26 Children face no difficulty in adjusting to the internet after removing the ban to use.

A) True
B) False
C) Not Given

27 All parents usually control the access of their children to the internet.

A) True
B) False
C) Not Given

28 Parents were advised to create a Facebook account to chat with their children online.

A) True
B) False
C) Not Given

29 Children should learn how to use the internet safety from their parents.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

ASTRONOMERS' NEW HOME IN THE ANDES

It is dawn in the Andes. A grimy carpet of red dust stretches over rolling featureless hills towards a horizon dominated by the icy cone of Chile's Licancabur volcano. There are no trees, no bushes, not even a blade of grass in this lifeless landscape. Even the atmosphere is alien. At 5,000 metres above the sea, oxygen levels are puny. Move suddenly, and bright spots blur your vision before you start to stagger and retch. This is Chajnantor, the most inhospitable portion of Chile's Atacama desert, and one of the most world's arid places. The annual rainfall here is negligible — a few drops of moisture scattered yearly on desiccated, empty land. You wouldn't last a day unprotected in this dead zone. It is hostile, threatening, and in a few years is destined to provide astronomers with a new home.

It is extraordinary. Nevertheless, the European Southern Observatory has committed itself to begin building an array of giant microwave receivers on Chajnantor. When completed, these machines will allow the world's astronomers to view the birth of thousands of planetary systems in the deepest recesses of our galaxy and probe the early universe's 'Dark Ages', when dust obscured the cosmos and the first stars flickered into existence. Unique knowledge is expected to flow from Alma, the Atacama Large Millimetre Array.

Each Alma receiver will consist of a transportable structure supporting a dish measuring 10 metres in diameter. Extending outwards from the smooth metal surface of the dish will be three support arms that hold a sub-reflector. This will direct the radio waves down into the heart of the receiver, where signals can be amplified, recorded and analysed. To vary its angle it will be mounted on an elevation structure, beneath which will be around on the steel base, the cylindrical platform for the receiver.

Scientists are now satisfied they know about the universe's birth and about its childhood. But they still need to learn about its early infancy thirteen billion years ago, after the newly-born cosmos had exploded into existence and the heavens had filled with superheated particles, a thin gruel of matter that somehow coalesced to produce heavy solid objects. 'We want to know how a hot, fluid universe turned into one with galaxies and stars and planets and continents and, eventually, people,' says UK astronomer Dr. Paul Murdin. 'We want to know how heavens got structure. In short, we want to understand how we got from the Big Bang to people.' 'One answer is to build even bigger optical telescopes to gather photons from even more distant — and therefore older — objects. However, really distant galaxies

recede from us so rapidly that much of their light transformed — by an effect as the Doppler shift — into microwave radiation.

And that is why Chajnantor is so important. Its receivers will be built specifically to collect this precious microwave radiation and help astronomers to understand one of science's last major cosmological mysteries: the structured, solid nature of the cosmos. But collecting microwave radiation has one major drawback, as Esteban Illanes, of the European Southern Observatory, explains. 'It is absorbed by water. An observatory at sea level would pick up nothing. All the microwaves coming down from space would have absorbed by clouds or water vapor in the atmosphere before they reached our instruments. That is why we picked Chajnantor. It is high and dry — perfect for picking up microwaves.'

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

The lack of **30** _____ makes Chajnantor one of the driest areas in the globe.

One feature of the Alma telescopes is they are **31** _____

Dr. Paul Murdin's final aim is to reveal how **32** _____ came into existence.

In Chajnantor, scientists can receive more microwaves as in this place **33** _____ can not take in them.

For questions 34-35, choose the correct answer A, B, C, or D.

34 **According to the information given in the reading passage, which is the feature of Chajnantor?**

A) completely flat land
B) unfriendly local people
C) intense heat during the day
D) a total lack of vegetation

35 **Which of these reasons is given by the writer for sitting telescope at Chajnantor?**

A) to minimize the effect of Doppler shift
B) to avoid the limitations of optical telescope
C) to discover how the universe began.
D) to see how the universe was changing ten billion years ago.

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

EXPLORING SPACE

Space is a vast and mysterious place filled with wonders. Scientists have studied **Q1**_____ for many years to understand how the planets, stars, and other objects move and interact. Our planet Earth is just one of many **Q2**_____ that travel around the Sun.

At night, we can see many bright stars in the sky. These **Q3** _____ are huge balls of burning gas, and they are much farther away than the moon. The **Q4**_____ is Earth's closest neighbor in space, and it reflects the light of the Sun.

To study the moon, stars, and faraway planets, scientists use a tool called a telescope. A **Q5**_____ helps people see things that are very far away. It collects light and brings the image closer so we can learn more about objects in space. They enjoy learning about the movements of planets and how **Q6** _____ travels across space to reach our eyes.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You are good at transport and need a full-time job

B) You are good at computer and want to work in an official job

C) You do not have experience and want to work as a customer service representative.

D) You need a job that influence people's minds and lives positively.

E) You are good at computer with long-term experience and want to work on appealing things.

F) You need a job that allows you work from the distance.

G) You need a job at school and want to work as a full time worker.

H) You want to work as an event coordinator.

I) You want to work for a company as an assistant manager.

J) You need a job that is associated with sales in one place.

7

We're looking for a kind and friendly person to join our bakery team. You'll take orders, answer phone calls, and make sure every customer has a great experience. You don't need any past experience, but you should love good food and enjoy helping people.

8

Are you good at social media and enjoy editing photos? We need someone creative to manage our online clothing store's social media pages. This is a freelance job you can do from home, and the hours are flexible. You must know how to use social media well and edit pictures professionally.

9

We're hiring a responsible and friendly driver to deliver food to people's homes. You need to have a clean driving record and a good attitude. This is a full-time job with good pay and benefits.

10

If you enjoy helping others and love books, this could be perfect for you! We're a busy bookstore looking for a part-time sales assistant. Your job will be to help customers find books, answer questions, and create a warm and welcoming space.

11

Our office is looking for someone organized and reliable to help with admin tasks. You'll answer phones, support different projects, and keep things running smoothly. You need to know Microsoft Office and have strong communication skills. This is a full-time role with benefits.

12

We need a talented graphic designer to create marketing materials for our small business. You must be good with Adobe Creative Suite and have a portfolio to show your work. It's a freelance position with flexible hours.

13

Do you love organizing events? We're searching for an energetic person to help plan and manage different events. You'll need great communication and organizational skills. This is a full-time job and offers room to grow within the company.

14

We're looking for someone caring and enthusiastic to support teaching children in a fun setting. Experience with kids is a plus but not required. It's a part-time job with flexible hours—and a chance to really make a difference in children's lives.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A taste of everything
B) Shop till you drop
C) City's tourist attractions
D) Ancient traditions live on
E) Activities for the adventurous and hardy
F) On the crossroads of religions
G) For the body, mind and soul
H) From the high peaks to the deep seas

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

DISCOVERING INDONESIA

15. Today Jakarta has much to offer, ranging from museums, art and antique markets, first class shopping to accommodations and a wide variety of cultural activities. Jakarta's most famous landmark, the National Monument or Monas is a 137m obelisk topped with a flame sculpture coated with 35 kg of gold. Among other places one can mention the National museum that holds an extensive collection of ethnographic artifacts and relics, the Maritime Museum that exhibits Indonesia's seafaring traditions, including models of sea going vessels.

16. Sumatra is a paradise for nature lovers, its national parks are the largest in the world, home to a variety of monkeys, tigers and elephants. Facing the open sea, the western coastline of Sumatra and the waters surrounding Nias Island have big waves that make them one of the best surfer's beaches in Indonesia. There are beautiful coral reefs that are ideal for diving. For those who prefer night dives, the waters of Riau Archipelago offer a rewarding experience with marine scavengers of the dark waters.

17. Various establishments offer professional pampering service with floral baths, body scrubs, aromatic oils, massages and meditation; rituals and treatments that use spices and aromatic herbs to promote physical and mental wellness. Various spa hotels are extremely popular. Indonesians believe that when treating the body you cure the mind.

18. Jakarta has a distinctly cosmopolitan flavor. Tantalize your taste buds with a gastronomic spree around the city's many eateries. Like French gourmet dining, exotic Asian cuisine, American fast food, stylish cafes, restaurants all compete to find a way into your heart through your stomach. The taste of Indonesia's many cultures can be found in almost any corner of the city: hot and spicy food from West Sumatra, sweet tastes of Dental Java, the tangy fish dishes of North Sulawesi.

19. In the face of constant exposure to modernization and foreign influences, the native people still faithfully cling to their culture and rituals. The pre-Hindu Bali Aga tribe still maintains their own traditions of architecture, pagan religion, dance and music, such as unique rituals of dances and gladiator-like battles between youths. On the island of Siberut native tribes have retained their Neolithic hunter-gathering culture.

20. Whether you are a serious spender or half hearted shopper, there is sure to be something for everybody in Jakarta. Catering to diverse tastes and pockets, the wide variety of things you can buy in Jakarta is mind boggling from the best of local handicrafts to haute couture labels. Modern super and hyper markets, multi-level shopping centers, retail and specialty shops, sell quality goods at a competitive price. Sidewalk bargains range from tropical blooms of vivid colors and scents in attractive bouquets to luscious fruits of the seasons.

PART 4

Questions 21–29

Read the following text for questions 21-29.

THE WORLD'S RICH NATIONS MISS A GOLDEN OPPORTUNITY

In a speech in October 2001, the British Prime Minister, Tony Blair, suggested that there would be a radical change of policy on Africa. "The current state of Africa", he said, "is a scar on the conscience of the world. But if the whole world focused on it, we could heal that scar. And if we don't focus on it, it will become deeper and angrier."

So I would like to ask Britain's prime minister to explain his actions at the G8 summit in France last week. A few weeks ago President Jacques Chirac did something amazing. After years of opposing any changes to European farm subsidies, he approached the US government to suggest that Europe would stop subsidising its exports of food to Africa if America did the same. This was an important offer, not only because it represented a significant change of policy for France, but also because it provided an opportunity for both the European Union and the US to abandon their constant attempts to offer higher agricultural subsidies than each other. As Blair has pointed out, the West's agricultural subsidies are a disaster for the developing world, and particularly for Africa. Farming accounts for some 70% of employment in Africa, and most of the farmers there are extremely poor. Part of the reason for this is that the prices of products grown by African farmers are unfairly undercut by the subsidised products dumped on their markets by exporters from the US and the EU.

So we might have expected Blair to have welcomed Chirac's initiative. Instead the prime minister single-handedly destroyed it. The reason is, of course, familiar. George Bush receives a great deal of political support from US agro-industrialists, grain exporters and pesticide manufacturers, and he was not prepared to match Chirac's offer. If the EU, and in particular the UK, had supported France, it would have been difficult for Bush to oppose the idea. But as soon as Blair made it clear that he would not support Chirac's plan, the initiative was dead.

So, thanks to Mr Blair and his habit of doing whatever Bush tells him to, Africa will continue to suffer. The basic problem is that the rich nations fix the global trade rules. The current world trade agreement was supposed to have prevented the EU and the US from subsidising their exports to developing nations. But the agreement contains so many loopholes that it permits the US and the EU simply to call their export subsidies by a different name.

The EU has stopped paying farmers for what they produce and started instead to give them direct grants, based on the amount of land they own and how much they produced there in the past. The US does the same and has also introduced some new

tricks. One of these is called "export credit": the state reduces the cost of US exports by providing cheap insurance for the exporters. These credits are worth some $7.7bn to US grain sellers. This money ensures that American exporters can undercut the world price for wheat and maize by between 10% and 16%, and the world price for cotton by 40%.

But the worst of its hidden export subsidies is its use of international aid as a means of entering the markets of poorer nations. Other countries give money and the World Food Programme can use this money to buy supplies in local markets, which helps local farmers at the same time as feeding starving people. The US, on the other hand, sends its own subsidised food instead of money, saying that this programme will "develop and expand commercial markets for US products".

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 According to the text, why did Jacques Chirac's proposal represent an important initiative?

A) It proposed to pay African farmers directly through subsidies.
B) It changed France's long-standing refusal to alter its farm subsidy policies.
C) It was the first time a US president agreed to abandon subsidies.
D) It offered additional compensation to help European farmers.

22 What does the text identify as the primary reason for the failure of Chirac's proposal at the G8 summit?

A) The European Union refused to hold talks with US agro-industrialists.
B) Tony Blair supported Chirac, but he couldn't convince other EU members.
C) Tony Blair did not back the plan, which made it easy for George Bush to reject it.
D) Other EU nations forced Tony Blair to give up on Chirac's plan.

23 How do the US and the EU allegedly bypass the rules against subsidizing exports?

A) They pay higher salaries to farmers who live abroad.
B) They introduce strict environmental regulations for farms.
C) They simply rename the payments and continue to subsidize.
D) They refuse to pay any subsidies in principle, but allow private organizations to do so.

24 According to the text, which of the following best describes the US approach to international food aid?

A) It sends money to the World Food Programme to buy local produce.
B) It invests heavily in local African farmers to improve their own production.
C) It sends its own subsidized food instead of money, to expand commercial markets for US products.
D) It has stopped all direct food donations and replaced them with private insurance credits.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 Tony Blair claimed that Africa's problems will be solved without any cooperation from the US.

A) True
B) False
C) Not Given

26 Jacques Chirac had always been a supporter of reducing subsidies to farmers before this summit.

A) True
B) False
C) Not Given

27 Export subsidies from the US allow American sellers to reduce the world price of certain crops by 10% to 16%.

A) True
B) False
C) Not Given

28 The European Union's changes to its farming payments are still considered export subsidies by some critics.

A) True
B) False
C) Not Given

29 The text states that the US has the highest export subsidies in the world.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

VOLCANOES

Volcanoes are among the most powerful and dramatic natural forces on Earth. They form when molten rock, ash, and gases escape from deep within the planet's crust through weak points or fractures. This molten material, known as magma, becomes lava once it erupts onto the surface. Volcanic activity has shaped the Earth's surface for millions of years, creating entire continents, islands, and mountain ranges. While often viewed as destructive, volcanoes are in fact fundamental to the planet's long-term geological and ecological evolution. The minerals released during eruptions contribute to soil formation, and the gases they emit play a role in regulating Earth's atmosphere. In this way, volcanoes are both builders and destroyers, highlighting the delicate balance between creation and collapse in the natural world.

Historically, volcanic eruptions have had profound consequences. The eruption of Mount Vesuvius in 79 AD buried the Roman cities of Pompeii and Herculaneum, preserving them in volcanic ash for future discovery. Krakatoa's 1883 explosion generated massive tsunamis and altered global weather patterns for years. More recently, the 2010 eruption of Iceland's Eyjafjallajökull disrupted international air travel, reminding the modern world that nature's forces remain far beyond our control. Volcanoes typically form along tectonic plate boundaries, where plates collide, pull apart, or slide past one another. The intense pressure and heat in these zones melt the mantle, forming magma. When this magma finds a path to the

surface, it results in an eruption. These eruptions can be gentle or violent, depending on the magma's composition, temperature, gas content, and viscosity.

There are several types of volcanoes, each with distinct features and eruption styles. Shield volcanoes, such as Mauna Loa in Hawaii, have wide bases and produce slow, fluid lava flows. Stratovolcanoes, including Mount Fuji and Mount Etna, are steep-sided and capable of highly explosive eruptions. Cinder cones are small, simple structures formed from ash and debris. Calderas, on the other hand, are large depressions formed after the collapse of a magma chamber following a massive eruption.

Despite their destructive potential, volcanoes offer numerous benefits. Volcanic ash is rich in minerals and contributes to the formation of extremely fertile soil, supporting agriculture in countries like Indonesia and Italy. Additionally, volcanic regions are often rich in geothermal energy, providing a sustainable source of electricity and heating. Volcanic rocks are used in construction, and unique volcanic landscapes fuel tourism, bringing economic advantages to local communities.

However, the hazards associated with volcanic eruptions are significant and should not be underestimated. Lava flows can destroy infrastructure and natural ecosystems. Ash clouds can collapse buildings, contaminate water supplies, and disrupt aviation. Toxic gases like sulfur dioxide and carbon monoxide pose serious health risks. Pyroclastic flows—fast-moving currents of hot gas and volcanic matter—are among the deadliest consequences of an eruption.

Modern science has made considerable progress in monitoring and forecasting volcanic activity. Seismographs detect ground vibrations caused by rising magma. Gas sensors analyze changes in volcanic emissions. Satellite imagery and thermal cameras help observe ground deformation and temperature increases. For example, a sudden increase in sulfur dioxide may indicate that magma is nearing the surface. Earthquakes often precede eruptions, and ground swelling can signal pressure building within the volcano.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Rather than being entirely harmful, volcanoes contribute to the Earth's long-term development by releasing useful **30** _____.

Eyjafjallajökull's eruption in 2010 mainly affected **31** _____ transport on a global scale.

The type of eruption a volcano produces is determined partly by how much **32** _____ the magma contains.

Among the various types of volcanoes, **33** _____ volcanoes are known for their wide base and slow-flowing lava.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 What is one way scientists predict volcanic eruptions?

A) By examining historical eruption records
B) By measuring the mountain's height changes
C) By observing ground shaking and gas levels
D) By testing lava for chemical changes

35 What is the writer's main purpose in the passage?

A) To warn people about the dangers of volcanoes
B) To describe different types of volcanic rocks
C) To explain the origins and impact of volcanoes
D) To compare volcanoes in different regions of the world

MOCK TEST 57

📖 READING

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1 — Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

CYCLING

Many people track how much time they spend cycling every week. Researchers suggest that 150 minutes of **Q1** _____ a week is enough for us to stay healthy and improve cardiovascular fitness. A new study says just 75 minutes of cycling a week could be enough to enhance our overall health. The **Q2**_____ analyzed 15 studies that examined the impact of cycling on health. They concluded that 75 minutes of cycling per week lowered the risk of developing heart disease, diabetes, and other chronic conditions. The study said 75 minutes of cycling is the same as biking for 10 to 15 minutes a day.

The **Q3**_____ is published in a sports medicine journal. Researchers looked at exercise data from 150,000 adults worldwide over five years. The **Q4**_____ had an average age of 45 and varied levels of physical fitness. The lead researcher said 75 minutes of cycling per week was beneficial, but it wasn't a "one-size-fits-all" solution. He added that the more time you spend cycling, the better. He also said adding an extra 30 **Q5**_____ of cycling per week could lead to a roughly 20 per cent lower risk of chronic illnesses. The researcher said **Q6**_____ should incorporate cycling into their weekly exercise routine.

PART 2 — Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You are looking for a role where you will be the first point of contact for guests, managing their arrivals and ensuring a welcoming environment.

B) You want to find a leadership role in a dining establishment with room for advancement and a focus on daily operations.

C) You need a position where you can apply your culinary expertise in an upscale environment, focusing on high-quality dish creation.

D) You are interested in a role where you can assist guests with detailed plans and local recommendations to enhance their stay.

E) You want to be part of a fast-paced environment where food service is key, interacting with customers regularly.

F) You are looking for a supervisory role in maintaining high standards of cleanliness and comfort for guests in a premium setting.

G) You need a flexible, part-time role where you can create beverages and maintain a pleasant atmosphere for customers.

H) You are seeking a position where you will organize and oversee large-scale events, ensuring that every detail meets clients' expectations.

I) You are passionate about creating sweet treats and baked goods, focusing on quality and creativity.

J) You are looking for a role where you can greet and assist guests, helping them find seating and providing a warm welcome.

7

Do you have a flair for creating delightful desserts? We need someone with a strong background in pastry arts who can innovate and produce high-quality baked goods. You will be in charge of crafting a variety of desserts, including pastries, cakes, and breads, with an emphasis on creativity and attention to detail. This is a full-time position in a setting that values artistic culinary expression.

8

We are looking for a driven individual to take on a leadership role within our dining establishment. This position offers a blend of managing day-to-day operations, mentoring staff, and contributing to the strategic growth of the business. Ideal candidates have a background in the hospitality industry and a passion for enhancing the guest dining experience.

9

We are seeking an individual who excels at making guests feel welcome and can manage the initial interaction with all our visitors. You will be responsible for handling guest check-ins and check-outs, providing information about our services, and ensuring that the front-of-house operations run smoothly. This role requires strong communication skills and a friendly, approachable demeanor.

10

We are looking for someone who can take charge of organizing and managing large-scale events, such as weddings and corporate functions. You will work closely with clients to understand their vision and ensure that every detail of their event is executed to perfection. This role requires excellent organizational skills, a keen eye for detail, and the ability to manage multiple projects simultaneously.

11

We are looking for someone with a passion for crafting beverages and creating a welcoming environment in our cozy café. You will be responsible for preparing drinks, engaging with customers, and maintaining the cleanliness and organization of the café. This part-time role offers flexible hours and a chance to be part of a community-focused business.

12

We are in need of someone who can oversee the cleanliness and comfort of our guest accommodations. Your primary responsibility will be to ensure that rooms and public areas meet our high standards of cleanliness and presentation. You will lead a team dedicated to providing a premium experience for our guests, managing schedules, and conducting regular inspections.

13

Join our kitchen team where your expertise in crafting sophisticated dishes will be valued. We are searching for someone with a deep passion for culinary arts and experience in a high-end dining environment. Your role will involve leading the creation of exceptional meals, focusing on quality and presentation. This is an opportunity to work in a refined setting where culinary innovation is encouraged.

14

Your role will be to enhance our guests' stay by providing personalized recommendations and making arrangements to meet their needs. This involves assisting with bookings, suggesting local attractions, and ensuring that each guest enjoys a memorable experience. The ideal candidate is resourceful, knowledgeable about the local area, and enjoys helping others.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Naturally different
B) Big age difference
C) Different opinions
D) Different ambitions
E) Small differences
F) No difference at all
G) Different rules
H) Learning to be different

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

FROM TWINS TO DREAMERS

15. John and James are identical twins but they don't go to the same school. Their parents felt this would help them develop individual tastes, interests and styles-but the boys at first hated the idea. Now they are really happy at their schools but occasionally they swap places just for fun! The brothers are best friends but they now agree that their parents were probably correct.

16. Anna and Beth are twin sisters but they are most unlike each other. Technically they are "non-identical" twins. Anna is blonde and Beth is a brunette. Anna is noisy, energetic and always crashing around to hip hop and rap. Beth is much quieter and likes listening to classical music and reading. Anna eats anything and Beth is a vegetarian. But they are, absolutely, the closest and best of friends.

17. The Perkins children, Sally and John, both study hard every evening after college and most weekends. Sally studies French, history and Art. She plans to go to university in Paris and wants to either work in a museum or an art sale room. John studies the Russian language, business studies and maths. He wants to study in St. Petersburg and to set up his own import business. I am sure both will succeed.

18. Greg's dad believes that there is no original, exciting new music being written and performed today. Greg strongly disagrees and can name several new bands and singers that are both completely original and really popular. But his Dad is a professional musician and was quite successful when he was young. He argues that nearly every successful song now is simply a reworked version of an older one.

19. In the UK you can legally do different things depending on your age. You can vote for a new government at 18 but at 17 you cannot drink a beer. At 16 you can marry and become a parent but you cannot drive to your wedding or make a traditional toast! Meanwhile lots of bars and clubs are open only to people above 21 which means, married, voting, car driving parents could still be too young to enter.

20. Serious stamp collectors are men and women who appreciate details. To the casual observer, the oldest postage stamps in the world — the Victorian "Penny Blacks" — all look identical. Millions were made but only a few of them are truly valuable. A serious collector knows this and the ability to find tiny variations in the paper, ink or code used helps them to find the "Penny Black's" that are rare and valuable.

PART 4

Questions 21–29

Read the following text for questions 21-29.

YAWNING

When Robert R Provine began studying yawning in the 1960s, it was difficult for him to convince research students of the merits of 'yawning science'. Although it may appear quirky to some, Provine's decision to study yawning was a logical extension of his research in developmental neuroscience.

The verb 'to yawn' is derived from the Old English *ganien* or *ginian*, meaning to gape or open wide. But in addition to gaping jaws, yawning has significant features that are easy to observe and analyse. Provine 'collected' yawns to study by using a variation of the contagion response*. He asked people to 'think about yawning' and, once they began to yawn to depress a

button and that would record from the start of the yawn to the exhalation at its end.

Provine's early discoveries can be summarized as follows: the yawn is highly stereotyped but not invariant in its duration and form. It is an excellent example of the instinctive 'fixed action pattern' of classical animal-behavior study, or ethology. It is not a reflex (short-duration, rapid, proportional response to a simple stimulus), but, once started, a yawn progresses with the inevitability of a sneeze. The standard yawn runs its course over about six seconds on average, but its duration can range from about three seconds to much longer than the average. There are no half-yawns: this is an example of the typical intensity of fixed action patterns and a reason why you cannot stifle yawns. Just like a cough, yawns can come in bouts with a highly variable inter-yawn interval, which is generally about 68 seconds but rarely more than 70. There is no relation between yawn frequency and duration: producers of short or long yawns do not compensate by yawning more or less often. Furthermore, Provine's hypotheses about the form and function of yawning can be tested by three informative yawn variants which can be used to look at the roles of the nose, the mouth and the jaws.

i) The closed nose yawn

Subjects are asked to pinch their nose closed when they feel themselves start to yawn. Most subjects report being able to perform perfectly normal closed nose yawns. This indicates that the inhalation at the onset of a yawn, and the exhalation at its end, need not involve the nostrils - the mouth provides a sufficient airway.

ii) The clenched teeth yawn

Subjects are asked to clench their teeth when they feel themselves start to yawn but allow themselves to inhale normally through their open lips and clenched teeth. This variant gives one the sensation of being stuck midyawn. This shows that gaping of the jaws is an essential component of the fixed action pattern of the yawn, and unless it is accomplished, the program (or pattern) will not run to completion. The yawn is also shown to be more than a deep breath, because, unlike normal breathing, inhalation and exhalation cannot be performed so well through the clenched teeth as through the nose.

iii) The nose yawn

This variant tests the adequacy of the nasal airway to sustain a yawn. Unlike normal breathing, which can be performed equally well through mouth or nose, yawning is impossible via nasal inhalation alone. As with the clenched teeth yawn, the nose yawn provides the unfulfilling sensation of being stuck in mid-yawn. Exhalation, on the other hand, can be accomplished equally well through nose or mouth. Through thin methodology Provine demonstrated that inhalation through the oral airway and the gaping of jaws are necessary for normal yawns. The motor program for yawning will not run to completion without feedback that these parts of the program have been accomplished.

But yawning is a powerful, generalized movement that involves much more than airway maneuvres and jaw-gaping. When yawning you also stretch your facial muscles, tilt your head back, narrow or close your eyes, produce tears, salivate, open the Eustachian tubes of your middle ear and perform many other, yet unspecified, cardiovascular and respiratory acts. Perhaps the yawn shares components with other behaviour. For example, in the yawn a kind of 'slow sneeze' or is the sneeze a 'fast yawn'? Both share common respiratory and other features including jaw gaping, eye closing and head tilting.

Yawning and stretching share properties and may be performed together as parts of a global motor complex. Studies by J I P deVries et al. in the early 1980s, charting movement in the developing foetus using ultrasound, observed a link between yawning and stretching. The most extraordinary demonstration of the yawn-stretch linkage occurs in many people paralyzed on one side of their body because of brain damage caused by a stroke, the prominent British neurologist Sir Francis Walshe noted in 1923 that when these people yawn, they are startled and mystified to observe that their otherwise paralyzed arm rises and flexes automatically in what neurologists term an 'associated response'. Yawning apparently activates undamaged, unconsciously controlled connections between the brain and the motor system, causing the paralyzed limb to move. It is not known whether the associated response is a positive prognosis for recovery, nor whether yawning is therapeutic for prevention of muscular deterioration.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 What was Robert R. Provine's primary focus when he began studying yawning?

A) Understanding the connection between yawning and sneezing
B) Investigating yawning as a stereotyped fixed action pattern
C) Examining the contagious nature of yawning
D) Analyzing the relationship between yawning and facial expressions

22 What did Provine's early research reveal about the nature of yawning?

A) It can be easily suppressed or shortened.
B) It is a reflex action that can be stopped at will.
C) It is a fixed action pattern that runs its course once initiated.
D) It varies significantly in intensity and duration.

23 What conclusion can be drawn from the "closed nose yawn" experiment?

A) The nasal airway is essential for yawning.
B) Yawning can occur without the use of nostrils.
C) Yawning is primarily a nasal action.
D) Clenching the teeth prevents yawning.

24 How does yawning relate to other bodily functions, according to the passage?

A) Yawning is completely independent of other bodily functions.
B) Yawning shares components with actions like sneezing and stretching.
C) Yawning primarily affects respiratory functions and does not involve other muscles.
D) Yawning is only associated with the movement of the jaw and mouth.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 **Provine's study confirmed that yawning is a reflex action similar to sneezing.**

A) True
B) False
C) Not Given

26 **The "clenched teeth yawn" experiment demonstrated that gaping of the jaws is essential for completing a yawn.**

A) True
B) False
C) Not Given

27 **Yawning can lead to the movement of paralyzed limbs in individuals who have suffered a stroke.**

A) True
B) False
C) Not Given

28 **Provine's research indicated that yawning is directly linked to sleep cycles.**

A) True
B) False
C) Not Given

29 **Yawning shares some components with other actions such as sneezing and stretching.**

A) True
B) False
C) Not Given

PART 5

Questions 30–35

Read the following text for questions 30-35.

LAKES

Lakes are vital components of the Earth's hydrosphere, serving as sources of freshwater, habitats for diverse ecosystems, and areas of recreational and economic activity for humans. These bodies of water, ranging from small ponds to vast inland seas, are formed through various geological processes and have significant environmental, social, and economic impacts.

Lakes can be classified based on their formation mechanisms. Tectonic lakes, such as Lake Baikal in Siberia, are formed by movements of the Earth's crust. When tectonic plates shift, they create depressions that can fill with water over time. Glacial lakes, like the Great Lakes of North America, are formed by the actions of glaciers. As glaciers advance and retreat, they carve out basins in the Earth's surface, which later fill with meltwater. Volcanic lakes, such as Crater Lake in Oregon, form in the calderas of extinct volcanoes. When a volcanic eruption empties a magma chamber, the resulting depression can accumulate water, creating a lake. Additionally, lakes can form from river activity. Oxbow lakes, for example, are created when a river meanders and forms loops that can become cut off from the main flow, leaving behind a lake.

Lakes play a crucial role in the global water cycle. They act as reservoirs, storing large amounts of freshwater that can be released into rivers, groundwater systems, and the atmosphere. This storage helps regulate the flow of water, reducing the impact of floods and droughts. Lakes also contribute to the local climate by moderating temperatures. During the day, they absorb heat, and at night, they release it, helping to stabilize the surrounding environment.

The biodiversity within lakes is remarkable. These ecosystems support a wide variety of plant and animal species, many of which are specially adapted to life in aquatic environments. Phytoplankton, the primary producers in lake ecosystems, use sunlight to perform photosynthesis, forming the base of the food web. Zooplankton, small aquatic animals, feed on phytoplankton and are, in turn, preyed upon by larger organisms such as fish. Lakes also provide habitats for amphibians, birds, and mammals, creating rich and diverse ecological communities.

Human activities around lakes have both positive and negative impacts. Lakes are often focal points for communities, providing water for drinking, agriculture, and industry. They offer opportunities for recreation, such as boating, fishing, and swimming, which can boost local economies through tourism. However, human activities can also threaten lake ecosystems. Pollution from agricultural runoff, industrial waste, and untreated sewage can degrade water quality, harming aquatic life and making water unsafe for human use. Invasive species introduced by human activity can disrupt the natural balance of lake ecosystems, outcompeting native species and altering habitats.

Climate change poses a significant threat to lakes worldwide. Rising temperatures can lead to increased evaporation rates, reducing water levels and concentrating pollutants. Changes in precipitation patterns can affect the inflow and outflow of water, altering the hydrological balance of lakes. Melting glaciers and ice sheets contribute to rising water levels in some regions, while increased evaporation can lead to shrinking lakes in others. The impact of climate change on lakes is complex and varies by region, but the overall trend is one of increased stress on these vital ecosystems.

Efforts to protect and preserve lakes are crucial. Conservation strategies include reducing pollution through improved agricultural practices, wastewater treatment, and industrial regulations. Protecting natural shorelines and wetlands around lakes helps maintain water quality and provides critical habitats for wildlife. Climate change mitigation efforts, such as reducing greenhouse gas emissions, are also essential to protect lakes from the long-term impacts of global warming.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

30 _____ depressions created by tectonic movements eventually fill with water, forming lakes. Lakes play an essential role in helping to **31** _____ water flow, thereby lessening the severity of floods and droughts. The primary producers in lake ecosystems, known as phytoplankton, utilize **32** _____ to carry out photosynthesis, which is fundamental to the lake's food web.

Increasing **33** _____ rates due to rising temperatures can result in lower water levels in lakes.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **What is one of the significant roles of lakes in the global hydrological cycle?**

A) Creating new habitats for invasive species
B) Mitigating the impacts of floods and droughts
C) Always increasing water temperatures
D) Serving mainly as sources of saltwater

35 **In what way can human activities detrimentally affect lake ecosystems?**

A) By enhancing local economies through tourism
B) By introducing invasive species that disrupt natural balances
C) By providing more recreational opportunities
D) By supplying water for drinking and agriculture

MOCK TEST 58

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

FOOTBALL ON WEEKENDS

Playing football is a common weekend activity for many people around the world. For some **Q1**_____, it's a hobby; for others, it's a way to stay fit and have fun. Every Saturday morning, a group of friends meet at the local field to play a match. The **Q2**_____ is not very big, but it's perfect for a friendly game of football.

The players bring their own ball, wear simple shoes, and divide into two teams. The **Q3**_____ are usually different each week, depending on who shows up. Sometimes there are new players, and other times it's the same group. No matter who plays, the **Q4**_____ always show great teamwork and energy.

Q5_____ teaches people how to cooperate, run, and focus. It also helps them build strong friendships. This weekend, they will return to the field, ready to kick the **Q6**_____.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You are looking for a hotel which is The Family Fun.

B) You need a hotel for the purpose of The Romantic Retreat.

C) You want to spend a good time by watching waves.

D) You need a hotel and want to enjoy city life.

E) You need a hotel which is good for "The Adventure Seeker".

F) You want to stay away from the busy life the rural area.

G) You want to have some information about the past.

H) You need a hotel coming from your eco-conscious choice.

I) You have limited budget so you need a reasonable hotel.

J) You need a hotel to organize a seminar.

7

The Mayfair Hotel in central London offers a stylish stay with city views, gourmet dining, and easy access to famous landmarks. Ideal for business trips or urban adventures.

8

The Coral Beach Resort offers an all-inclusive vacation with beautiful beaches, clear water, spa treatments, and fun activities for all ages, creating unforgettable memories.

9

The Adventureland Hotel is great for families, with a waterpark, petting zoo, kids' club, and fun activities. Spacious suites and tasty meals make for lasting memories.

10

This French countryside hotel offers scenic vineyard views, spa services, and romantic dinners—perfect for couples seeking peace and charm.

11

The Imperial Hotel in Rome blends history and elegance. Guests can enjoy antique decor, ancient sites, museums, and Italian cuisine at the hotel's restaurant.

12

The Green Oasis Resort is an eco-friendly getaway in the rainforest. It promotes responsible tourism with nature walks, natural pools, and conservation learning.

13

The Backpacker's Haven Hostel is a lively, low-cost stay for independent travelers. Enjoy shared spaces, meet global adventurers, and explore the city on a budget.

14

The Mountain Lodge in the Swiss Alps is ideal for thrill-seekers. With mountain views, hiking trails, and top cuisine, it's a warm, scenic escape for outdoor lovers.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) One for more than a dozen
B) Land and water
C) For adrenalin rush
D) High in many ways
E) The smaller the better
F) A country in a city
G) Once poor, now rich
H) Not rich any more

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

SMALL COUNTRIES

15. Another tiny European country is Liechtenstein, which is quite large compared to Monaco. It covers 160 square kilometers. It borders Switzerland and Austria, and is situated entirely within the Alps. Most of its territory is mountainous, making it a popular destination for skiers. With almost no natural resources, the country has developed a highly-industrialized free-enterprise economy. Like its neighbor Switzerland, Liechtenstein follows a policy of neutrality and has no military.

16. Next on the list of tiny countries is Monaco, which covers about 2 square kilometers. Monaco is also famous for being the smallest monarchy in the world, and for being the most densely populated country. It may be best known as one of James Bond's favorite places, with its many casinos and beautiful women! The economy of Monaco is based mostly on gambling and tourism. It lies on the coast of the Mediterranean Sea and borders France.

17. Everyone knows that Russia is the largest country in the world, in terms of territory. But what about the world's smallest countries; do you know what they are? Today there are 17 countries that each consists of less than 500 square kilometers in area. If we combined all the land area of these 17 countries, we would have a single country just a bit larger than the U.S. state of Rhode Island. Even tiny Singapore is too big for this list.

18. The smallest of these tiny countries is Vatican City, covering less than half a square kilometer. Vatican City is the spiritual center of the world's Roman Catholics, who today number over 1 billion. It is also the home of the Pope, the head of the Catholic Church. About 800 people reside permanently in Vatican City, but over 25,000 people visit every day, in order to see its beautiful churches and museums. Vatican City is surrounded by Rome, Italy.

19. Tiny Nauru is both the smallest island nation in the world and the smallest republic. Its total territory is just 21 square kilometers. It's situated in the southern Pacific Ocean. In the early part of the 20th century, the people of Nauru became rich, thanks to the rich phosphate reserves on the island. But once all the phosphate was mined, the small nation found it had no other income source for its 9,000 citizens. Today 90% of the island's inhabitants are unemployed.

20. Many of the world's smallest countries are islands or groups of islands. For example, the Maldives is a country made up of 1,190 islands, only 185 of which are occupied. The country, situated in the Indian Ocean, can claim 298 square kilometers in land-territory. A former colony of the U.K., it has been independent since 1965. While hot and humid all year long, the Maldives also enjoys constant cool sea breezes. Its beautiful coral reefs make it a popular destination for divers.

PART 4

Questions 21–29

Read the following text for questions 21-29.

A STRANGE MORNING OF SILENCE

Emily woke up before her alarm went off and knew instantly something wasn't quite right in the house. Bailey, her chocolate-coloured pet Labrador, should have been there at the bedroom door demanding food but there was no sound of him. She decided to get up and go and see where he was. It felt cold in the hall but she knew she had left the heating on last night. As she walked down the stairs she heard a noise in the kitchen; the strange feeling that something was wrong was getting stronger. What was going on? She got to the bottom of the stairs and opened the door to the living room, which led to the kitchen. Why was the door closed? She always left it open. Bailey was nowhere to be seen and his toys, which were usually all over the living room floor, were in a neat pile in the corner next to his basket. Had they been there when she had gone to bed last night? She couldn't remember.

She walked into the kitchen and turned the light on, it didn't work, nothing happened. She stood very still and listened, nothing. There wasn't a sound. That was really strange; she lived in the middle of a busy city, there were always people around. She woke up to the sound of traffic, car horns, police cars, her neighbours shouting in the house next door, how could there be silence at 8 o'clock on a Friday morning? She went back into the living room and turned the TV on, but again nothing happened. She went back into the kitchen and looked out of the window; it was a bright clear day. The back door was shut but when she tried the handle she realised it was unlocked. She walked out into the tiny back garden and opened the back gate; still nothing, not a sound and no sign of Bailey.

She called him but he didn't come. She went back into the house and what she realised she should have done as soon as she got up and called her mother. But there was no answer. She called her boyfriend but his mobile was switched off and she got the answer phone message. She tried a couple of other numbers but with equal success. She sat down on the sofa and thought about what she could do. She couldn't decide if she should stay at home or go out and find someone. Just as she decided the best thing would be to stay at home and wait, there was a loud banging on the front door. She jumped up and ran to the door. "Who is it?" she shouted through the door. "It's me," came the reply. But she had no idea who "me" was. She didn't want to open the door until she was sure she knew who it was, not with all the other strange things that were happening this morning, and she didn't want to shout through the thick front door, so she walked back into the living room and tried to look through the front window to see who was standing at the front door. It was a man but she couldn't make out who he was; he didn't look familiar. He was tall and was wearing a big coat with a hood over his head.

Just as she was thinking of running out the back door she saw that the man had Bailey with him, and Bailey seemed quite happy, which meant that the man had to be someone he knew and liked; he would have been barking otherwise. She still wasn't taking any chances though; she put the safety latch on the door and opened it just enough to see who was there. She was instantly relieved; it was her brother, who lived just a few streets away. She opened the door all the way and let him in. As he walked through the door he was almost knocked over by Bailey jumping up and looking more pleased than ever to see her. "So what's going on?" she asked her brother. He looked at her as if she was stupid. "Haven't you heard?"

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 What was Emily's first clue that something was unusual that morning?

A) The living room door was wide open.
B) Bailey wasn't at her bedroom door demanding food.
C) She heard loud music in the kitchen.
D) The central heating had stopped working.

22 Which detail in the text shows Emily is surprised by the total silence?

A) She lives in a remote countryside area.
B) She expected more noise in a busy city on a Friday morning.
C) There were normally no cars or people around at that time.
D) She woke up much earlier than usual.

23 How did Emily discover there was probably no electricity?

A) She tried to put the heating on and it didn't work.
B) The lights wouldn't turn on in the kitchen.
C) She turned on the TV and only got static.
D) She tried using the house phone and it went dead.

24 Why did Emily decide to open the front door in the end?

A) She heard her brother's voice clearly when he called.
B) She realized Bailey was calmly standing next to the man.
C) The man at the door threatened to break it down.
D) She remembered she had invited someone to visit.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 Emily finds Bailey's toys lying scattered around the living room floor.

A) True
B) False
C) Not Given

26 Emily attempts several phone calls but cannot get through to anyone.

A) True
B) False
C) Not Given

27 The text states that Emily's mother left her a message on the voicemail.

A) True
B) False
C) Not Given

28 The stranger at the door turns out to be Emily's brother.

A) True
B) False
C) Not Given

29 Emily had locked the back door before going to bed.

A) True
B) False
C) Not Given

PART 5 — Questions 30–35

Read the following text for questions 30-35.

FALCONS

Falcons have existed on Earth for more than 8 million years. They belong to a group of birds called "birds of prey" or raptors, which means they hunt other animals for food. These birds are famous for their sharp eyesight, hooked beaks, and incredible flying abilities. From ancient times, humans have admired falcons not only for their hunting skills but also for their beauty and intelligence. In many cultures, especially in the Middle East, falcons are considered symbols of strength, courage, and nobility. The tradition of training falcons, known as *falconry*, dates back thousands of years. Egyptian pharaohs, Mongol warriors, and Arabian princes all kept falcons as hunting companions and loyal birds. Even today, falconry remains a respected practice and a unique way to connect with nature. There are more than 40 species of falcons in the world, but a few are especially well-known in falconry. The peregrine falcon is the fastest animal on Earth. It can dive at a speed of over 300 kilometers per hour to catch its prey. The saker falcon, common in Central Asia and the Arabian Peninsula, is prized for its boldness, size, and hunting instinct. It is especially popular in traditional falconry and is often seen in royal competitions. The gyrfalcon, found in Arctic regions, is the largest falcon and admired for its snowy white feathers and calm nature. The lanner falcon, with its elegant wings and sharp focus, is often chosen by beginner falconers for training. Each of these falcons has a special character. For example, the saker is known to be very loyal once trust is built, while the peregrine is more independent and requires an experienced handler. Therefore, choosing the right falcon depends on the goals, preferences, and experience level of the falconer. When selecting a falcon, several factors need to be considered: the bird's age, health, temperament, and previous experience. Younger birds may be easier to train but can also be more unpredictable. Older falcons might already have hunting skills but could take longer to trust a new trainer.

Once chosen, a falcon requires daily attention and care. Its diet plays a major role in its strength and performance. In the wild, falcons eat small animals such as mice, rabbits, and birds. In captivity, falconers usually feed them fresh meat such as quail, pigeon, or rabbit. High-quality food is essential, as poor diet can affect the bird's health and flying ability. Clean water, a quiet shelter, and daily exercise are also part of a falcon's routine. Before a falcon can be used for hunting or flying in public, it must go through manning. Manning is the process of taming a falcon and helping it become comfortable with humans, sounds, and the world around it. This is not a quick or easy task. The bird may be nervous, aggressive, or simply afraid at first. The manning process begins with the falconer sitting calmly with the bird perched on a thick glove. This can last for hours, sometimes in complete silence. The goal is to teach the bird that the human is not a threat. Over time, the falcon learns to accept hand-feeding, stay calm around noise, and respond to the falconer's call. Some falcons adjust quickly, while others may take weeks or even months. Today, falconry is still practiced in many parts of the world, including Europe, Central Asia, and the Middle East. In countries like the UAE and Saudi Arabia, falconry is considered a national tradition and falcons are even given passports to travel with their owners.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

One ancient practice involving falcons is called **30** _____, and it has been passed down through generations in many cultures. The **31** _____ falcon is particularly valued for its physical build and natural hunting behavior. When kept in captivity, falcons occasionally consume **32** _____. The process of taming a new falcon and teaching it to trust humans is known as **33** _____.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **According to the text, which falcon is especially suited for beginners due to its temperament?**

A) Saker falcon
B) Lanner falcon
C) Peregrine falcon
D) Gyrfalcon

35 **Why do countries like the UAE grant passports to falcons?**

A) Because they are recognized as essential pest controllers
B) Because they must follow strict international breeding laws
C) Because they are regarded as valuable national treasures
D) Because they need extra protection from airport authorities

READING

5 parts · 35 questions

60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

CAR FUMES

Breathing air pollution could change our brain. A study shows that car fumes can change how parts of our **Q1**_____ connect with other parts. The research is from a university in Canada. It found that car fumes can change our brain's connectivity in two hours. Professor Chris Carlsten was surprised at what he found in his **Q2**_____. He said: "For many decades, scientists thought the brain may be protected from the harmful effects of air pollution." He added: "This study provides fresh evidence supporting a connection between air pollution and thinking."

The **Q3**_____ study was on 25 adults. Researchers asked **Q4**_____ to breathe car fumes in a laboratory. The team took brain scans of the adults for two hours. The scans showed that networks in the brain that we use for thinking changed. There were fewer connections between the **Q5**_____ Another professor was worried when she saw how traffic pollution interrupted networks in the brain. She wants more research to see how car fumes change our brain. She said people should close car windows when in traffic. The brains of the 25 **Q6**_____ returned to normal after they breathed clean air.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A pair is seeking a secluded retreat where they can indulge in exquisite dining experiences.

B) Your acquaintance, a qualified sailing instructor, desires employment in a location with convenient access to maritime activities.

C) You require a venue equipped with cutting-edge facilities to host large-scale corporate events.

D) Your friend, an experienced pastry chef, is searching for a position in a hotel that offers on-site living accommodations.

E) You are pursuing a managerial role in a hotel that provides opportunities for professional advancement.

F) Your colleague seeks a tranquil setting suitable for conducting a leadership workshop.

G) You and your partner are seeking a cozy seaside hotel where you can enjoy water activities together and relax in a tranquil environment.

H) You wish to spend your vacation in a destination that offers a mix of outdoor activities and cultural experiences.

I) A friend is interested in overseeing the operations of a restaurant that offers a competitive compensation package.

J) You are in search of a beachfront location where you and a small group of friends can unwind.

7

Located along a serene coastline, this boutique hotel offers 15 elegantly designed rooms, each with a private balcony overlooking the sea. The hotel features a quaint restaurant serving fresh, local seafood and offers various water activities such as kayaking and paddleboarding. Ideal for couples and small groups looking to unwind by the beach. For inquiries, email info@seasidehaven.com.

8

This charming inn is positioned just a short distance from a lively marina, providing guests with the opportunity to partake in various water sports, including sailing lessons available at the nearby harbor. For additional details, visit www.harborinn.co.uk.

9

Set amidst the heart of natural surroundings, this lodge is an ideal escape for enthusiasts of nature and outdoor adventures. Guests can explore hiking trails, enjoy bird watching, and delve into the cultural heritage of a nearby site. Reserve your stay at greenwoodlodge.com.

10

This contemporary venue is fully equipped to meet the demands of large corporate gatherings, offering expansive conference rooms, dining facilities, and comprehensive technical support. Its peaceful location with scenic surroundings makes it an excellent choice for workshops and seminars. Contact us at cedarwoodconference.com.

11

Located at the heart of the city, The Grand Hotel offers luxurious accommodations paired with all the necessary amenities for hosting significant corporate events. The hotel features multiple banquet halls and conference spaces capable of accommodating events of various scales. For more details, call 020 7946 0860.

12

A family-operated establishment located in a picturesque village, this inn is currently seeking a committed chef to join its small yet skilled team. The role includes accommodation and offers potential for career growth in a nurturing environment. Inquiries can be made by calling 01483 923456.

13

Tucked away in a remote location, this 16th-century manor exudes a romantic ambiance, featuring candlelit dinners with gourmet local cuisine and personalized service tailored for couples. For more information, visit foxhillmanor.co.uk.

14

This seaside hotel is in search of an experienced assistant manager to assist in overseeing daily operations. The ideal candidate will have a background in hospitality management and a drive to advance their career within the industry. Submit your CV to seaviewhotel@jobs.co.uk.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) An array of diverse species
B) Embodying endurance
C) Multifaceted roles in society
D) Flourishing in extreme climates
E) Origins in barren terrains
F) From arid wilderness to urban spaces
G) Beyond ordinary flora
H) Evolutionary mastery

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

CACTUS

15. Cacti are renowned for their capacity to thrive under some of the planet's most challenging conditions. Predominantly found in desert regions, these plants have developed an array of adaptations that allow them to endure extreme temperatures and prolonged periods of drought. Their thick, waxy epidermis minimizes water loss, while their spines provide both protection and a form of shade. Despite the harsh environments they inhabit, cacti demonstrate remarkable longevity, often surviving for several decades or more.

16. Cacti serve a multitude of purposes across different cultures. In Mexican cuisine, the fruit of the prickly pear, known as "tuna," is a common ingredient. Traditional medicine also makes use of cactus extracts to treat various ailments, including digestive issues and skin conditions. Additionally, the spines of certain cacti have been used in crafts and jewelry. The distinctive form of the cactus has also inspired modern design, influencing everything from furniture to architectural structures. This versatility has cemented the cactus's place in both traditional and contemporary culture.

17. The cactus has its roots in the arid landscapes of the Americas, where it has thrived for millions of years. Fossil evidence suggests that the ancestors of today's cacti were present over 30 million years ago. These resilient plants are now widespread, from the deserts of the southwestern United States to the harsh, dry environments of the Atacama Desert in Chile. The cactus's ability to flourish in such desolate areas underscores its evolutionary prowess.

18. The cactus has come to symbolize resilience and perseverance, often regarded as a metaphor for strength in adversity. Its capacity to not only survive but also thrive in the most unforgiving environments has made it an emblem of toughness and endurance. In literature and visual arts, the cactus is frequently used to represent these qualities, embodying the spirit of overcoming challenges and persisting against all odds.

19. Although cacti originate from some of the world's driest regions, they have gained popularity as decorative plants in both residential and commercial spaces globally. Their striking, often unconventional appearances, combined with their minimal care requirements, have made them a favorite among gardeners and interior designers. In urban environments, cacti are frequently incorporated into landscaping to introduce an exotic element. Certain species, such as the Christmas cactus, have even been cultivated to bloom indoors during the colder months, adding a touch of vibrancy to winter settings.

20. The cactus family exhibits an extraordinary range of species, each uniquely adapted to its surroundings. From the towering saguaro of the Sonoran Desert to the diminutive, spherical peyote, these plants have undergone significant evolutionary diversification. Some species, like the saguaro, grow to impressive heights, resembling trees, while others remain compact and close to the ground. This remarkable diversity not only aids in their survival but also makes cacti highly sought after by horticulturists and enthusiasts around the globe.

PART 4

Questions 21–29

Read the following text for questions 21-29.

ANCIENT STORYTELLING

It was told, we suppose, to people crouched around a fire: a tale of adventure, most likely-relating some close encounter with death; a remarkable hunt, an escape from mortal danger; a vision, or something else out of the ordinary. Whatever its thread, the weaving of this story was done with a prime purpose. The listeners must be kept listening. They must not fall asleep. So, as the story went on, its audience should be sustained by one question above all. What happens next?

The first fireside stories in human history can never be known. They were kept in the heads of those who told them. This method of storage is not necessarily inefficient. From documented oral traditions in Australia, the Balkans and other parts of the world we know that specialised storytellers and poets can recite from memory literally thousands of lines, in verse or prose, verbatim-word for word. But while memory is rightly considered an art in itself, it is clear that a primary purpose of making symbols is to have a system of reminders or mnemonic cues – signs that assist us to recall certain

information in the mind's eye. In some Polynesian communities, a notched memory stick may help to guide a storyteller through successive stages of recitation. But in other parts of the world, the activity of storytelling historically resulted in the development or even the invention of writing systems.

One theory about the arrival of literacy in ancient Greece, for example, argues that the epic tales about the Trojan War and the wanderings of Odysseus – traditionally attributed to Homer – were just so enchanting to hear that they had to be preserved. So the Greeks, c.750-700BC, borrowed an alphabet from their neighbors in the eastern Mediterranean, the Phoenicians.

The custom of recording stories on parchment and other materials can be traced in many manifestations around the world, from the priestly papyrus archives of ancient Egypt to the birch-bark scrolls on which the North American Ojibway Indians set down their creation-myth. It is a well-tried and universal practice: so much so that to this day storytime is probably most often associated with words on paper. The formal practice of narrating a story aloud would seem-so we assume to have given way to newspapers, novels and comic strips. This, however, is not the case. Statistically, it is doubtful that the majority of humans currently rely upon the written word to get access to stories. So what is the alternative source?

Each year, over 7 billion people will go to watch the latest offering from Hollywood, Bollywood and beyond. The supreme storyteller of today is cinema. The movies, as distinct from still photography, seem to be an essential modern phenomenon. This is an illusion, for there are, as we shall see, certain ways in which the medium of film is indebted to very old precedents of arranging 'sequences' of images. But any account of visual storytelling must be with the recognition that all storytelling beats with a deeply atavistic pulse: that is, a 'good story' relies upon formal patterns of plot and characterisation that have been embedded in the practice of storytelling over many generations.

Thousands of scripts arrive every week at the offices of the major film studios. But aspiring screenwriters really need to look no further for essential advice then the fourth-century BC Greek Philosopher Aristotle. He left some incomplete lecture notes on the art of telling stories in various literary and dramatic modes, a slim volume known as The Poetics. Though he can never have envisaged the popcorn-fuelled actuality of a multiplex cinema, Aristotle is almost prescient about the key elements required to get the crowds flocking to such a cultural hub. He analyzed the process with cool rationalism. When a story enchants us, we lose the sense of where we are; we are drawn into the story so thoroughly that we forget it is a story being told. This is, in Aristotle's phrase, 'the suspension of disbelief.'

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 What was the main goal of the earliest fireside stories?
A) To entertain with humor
B) To keep the audience attentive and awake
C) To impart moral lessons
D) To record historical events

22 What does the passage imply about the first storytellers?
A) They heavily relied on written texts.
B) They used memory techniques to retain stories.
C) They recorded tales on parchment.
D) They avoided using symbols or cues.

23 Why did the ancient Greeks reportedly adopt an alphabet from the Phoenicians?
A) To document agricultural practices
B) To preserve epic tales like those of the Trojan War
C) To improve trade and communication
D) To create a legal system

24 According to the passage, what serves as the modern equivalent of ancient storytelling?
A) Newspapers and novels
B) Radio broadcasts
C) Cinema
D) Social media platforms

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 The earliest fireside stories primarily focused on the afterlife.
A) True
B) False
C) Not Given

26 In some cultures, storytellers used notched sticks to help them remember the sequence of events.
A) True
B) False
C) Not Given

27 The ancient Greeks developed their alphabet independently, without outside influence.
A) True
B) False
C) Not Given

28 The Ojibway Indians recorded their creation myths on birch-bark scrolls.
A) True
B) False
C) Not Given

29 Aristotle's 'The Poetics' offers insights that are still relevant for modern screenwriters.
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

T-REX HUNTER

Jack Horner is an unlikely academic: his dyslexia is so bad that he has trouble reading a book. But he can read the imprint of life in sandstone or muddy shale across a distance of 100m years, and it is this gift that has made him curator of palaeontology at Montana State University's Museum of the Rockies, the leader of a multi-million dollar scientific project to

expose a complete slice of life 68m years ago, and a consultant to Steven Spielberg and other Hollywood figures.

His father had a sand and gravel quarry in Montana, and the young Horner was a collector of stones and bones, complete with notes about when and where he found them. "My father had owned a ranch when he was younger, in Montana," he says. "He was enough of a geologist, is a sand and gravel man, to have a pretty good notion that they were dinosaur bones. So when I was eight years old he took me back to the area that had been his ranch, to where he had seen these big old bones. I picked up one. I am pretty sure it was the upper arm bone of a duckbilled dinosaur: it probably wasn't a maiaosaur but closely related to that. I catalogued it, and took good care of it, and then later when I was in high school, excavated my first dinosaur skeleton. It obviously started earlier than eight and I literally have been driven ever since. I feel like I was born this way."

Horner spent seven years at university but never graduated. "I have a learning disability, I would call it a learning difference – dyslexia, they call it – and I just had a terrible time with English and foreign languages and things like that. For a degree in geology or biology, they required two years of a foreign language. There was no way in the world I could do that. In fact, I didn't really pass English. So I couldn't get a degree, I just wasn't capable of it. But I took all of the courses required and I wrote a thesis and I did all sorts of things. So I have the education, I just don't have the piece of paper," he says.

In Montana, in those days, everybody had the right to a college education. His grades at high school had been terrible, at university, his advisers recognised that he was having a hard time, and went on helping. The dean who kept readmitting him was to give Horner an honorary doctorate years later. As a young non-graduate, Horner wrote to every museum in the English-speaking world, asking for a job. Los Angeles County Museum and the Royal Ontario Museum in Toronto made offers, but he accepted a post as a technician at Princeton University because of Princeton, New Jersey.

"We definitely know we are working on a very broad coastal plain with the streams and rivers bordered by conifers and hardwood plants, and the areas in between these rivers were probably fern-covered. There were no grasses at all: just ferns and bushes – an unusual landscape, kind of taking the south-eastern United States – Georgia, Florida – and mixing it with the moors of England and flattening it out," he says. "Triceratops is very common: they are the cows of the Cretaceous, they are everywhere. Duckbilled dinosaurs are relatively common but not as common as triceratops and T rex, for a meat-eating dinosaur, is very common. What we would consider the predator-prey ratio seems really off the scale. What is interesting is the little dromaeosaurs, the ones we know for sure were good predators, we haven't found any of them."

Which is why he sees T rex, not as the lion of the Cretaceous savannah but its vulture. "Look at the wildebeest that migrate in the Serengeti of Africa, a million individuals lose about 200,000 individuals in that annual migration. There is a tremendous carrion base there. And so you have hyenas, you have tremendous numbers of vultures that are scavenging, you don't have all that many animals that are good predators. If T rex was a top predator, especially considering how big it is, you'd expect it to be extremely rare, much rarer than the little dromaeosaurs, and yet they are everywhere, they are a dime a dozen," he says. A 12-tonne T rex is a lot of vultures, but he doesn't see the monster as clumsy. He insisted his theory and finding, dedicated to further research upon it, of course, he would like to reevaluate if there is any case that additional evidence found or explanation raised by others in the future.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Horner serves as the curator of palaeontology at Montana State University's Museum of the **30** _____. At the age of eight, Horner discovered what he believed to be the upper arm bone of a **31** _____ dinosaur. Horner faced challenges with **32** _____ due to his dyslexia, preventing him from earning a degree. Horner likens the T-Rex to a **33** _____, suggesting it scavenged like vultures rather than actively hunted.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 Why was Horner unable to complete his university education?

A) He was dismissed for low academic performance.
B) He couldn't meet the foreign language requirements.
C) He lost enthusiasm for his studies.
D) He failed to submit his thesis.

35 What is Horner's reasoning for considering T-Rex more of a scavenger?

A) It lacked the speed to catch live prey.
B) It was too massive to function as a top predator.
C) It was found more frequently than smaller, known predators.
D) Its teeth were more suitable for scavenging than for hunting.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

JACK CALDER

Violin player Jack Calder plays in the Australian band, Ocean Blue.

Jack Calder started playing the violin when he was ten. "My music teacher played and one day he asked if anyone wanted to learn. Some girls put up their hands and wished to **Q1** _____. I didn't have a **Q2** _____, but my uncle said I could use his. The lessons were really hard at first, but playing the violin soon became important to me. So I got used to the **Q3** _____.

After leaving school, Jack moved to Melbourne. For a time, he preferred listening to music to playing it. The rock music he listened to sounded very different from violin **Q4** _____, so he bought an electric violin, and **Q5** _____ putting the things he liked about rock music into the music he played on his violin.

A year later, Jack met a small group of Melbourne musicians. "We all thought about music in the same way and started Ocean Blue together. A year later, we were **Q6** _____ in lots of concerts, and our music was selling well. But we didn't want this to make us different people. We didn't want to stop being friends."

PART 2

Questions 7–14

Read the texts and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) This place is perfect for people who enjoy drinking wine outside at midnights.

B) Visitors may bring their alcohol or other drinks with themselves.

C) You won't have any problem with parking due its big size.

D) This restaurant is perfect for people who usually suffer from the shortage of time.

E) Guests should follow the schedule offered by the bar due to its limited space but high popularity.

F) You can enjoy the view of city along with eating seafood in this restaurant.

G) This restaurant may not serve clients during weekends.

H) It may cost a lot to have a dinner there because of the city center location.

I) Visitors who want to leave the city by train may choose this place unless they smoke.

J) If you don't eat meat and prefer smoking while sitting, this place is right for you.

7

Bars and Restaurants**BAR 4U** You can watch the world go by through the big windows at the front of this busy city cafe. The menu includes fish and seafood, and you can sit there if you like, even if you're only having a glass of fruit juice.

8

ALL THE RAJ This city centre Indian restaurant, taking a comfortable but rather smoky place, offers some traditional vegetarian dishes as well as its well-known chicken and lamb food. Prices are not expensive, and there is a small wine list.

9

THE HARVEST HOME Just out the busy Celtenham road, in the pretty village of Wibbly, this restaurant with its large car park is popular with passing motorist. The restaurants serves good simple food in a friendly and relaxed atmosphere.

10

THE OASIS Take plenty of money with you if you go to this famous restaurant in the center of the city. The owner changed six months ago, but people say that the new owner, who trained as a chef in Paris, is just as good.

11

LOCH TEEN New in town, located in a basement room, this speciality seafood bar is already quite popular. Because of the limited space, they have to have two timetables - early evening (6.30) and later (8.30) and you might feel it's a bit rushed.

12

THE TERRACE WINE BAR You can sit outside and eat under the stars here, where they serve food from midday till 3 am. The food is simple-crepes, pasta, burger-and good wine sorts, they serve beers from over 50 countries.

13

DOWN TO EARTH This bright, white restaurant (no smoking allowed) is situated next to the central train station. It's vegetables only here with a whole new world of delicious and imaginative dishes.

14

JOE'S DINER Open early and late, this snack-bar is popular with both market workers and city business people. You'll only get quick and simple meals, but they'll be well cooked and quickly served. No alcohol licence.

PART 3

Questions 15–20

Read the text and choose the correct heading or each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

List of Headings:

A) Bicycle is faster
B) Controlling skies
C) Office at home
D) Lack of safety
E) Paid roads
F) Improving railways
G) Blocked roads
H) Buses instead of cars

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

RAILWAYS

I. The world's first public passenger railway was built in Great Britain in 1826 and ran between the industrial north-eastern towns of Stockton and Darlington. After 180 years' experience the British say that their trains still don't seem to run efficiently or even safely. On average, about 500 accidents with broken rail tracks happen in the country every year.

II. The British government is promising to give £33.5 billion to modernize the railways before 2010. Another £30 billion is to come from the private sector. The main target is to increase safety and speed. For example, new London-to-Scotland highspeed trains significantly reduce journey times and in 2004 a warning system was installed throughout the country.

III. Statistics show that only 12% of all journeys made in Britain are by public transport. The remaining 88% are made by car. Every year British people spend about two weeks travelling to and from work including nine days their own cars. But anyone will say this isn't a quick and easy way to travel. In fact, a journey from London to Manchester frequently takes seven hours. A cyclist could get there quicker.

IV. Every year there are about half a million traffic jams in Britain. That in nearly 10,000 a week. There are hundreds of big traffic jams every day According to the forecast, the number of jams will grow by 20 per cent over the next ten years. Nearly a quarter British people find themselves in a jam every day and 55 per cent at least once a week.

V. Nowadays many British people take their children to school by car Twenty years ago, nearly one in three primary school children made their own way to school. Now only one child in nine makes their own way. During the school year at 08:50 a.m. one car in five on the roads in any British town is taking children to school. The solution could be special school buses widely used in the USA.

VI. Many scientists hope that new technologies allowing more people to work at home may help with traffic problems. Fewer people will work from 9 to 5 and travel to and from work during the rush hour. But only 15% of people now want to spend more time working at home. The workplace is, for many people, a place to meet other people and to talk to them, so they would miss it if they worked from home.

PART 4

Questions 21–29

Read the following text for questions 21-29.

LEARNING MANDARIN

Alan McCormick, 16, lives near Sacramento, California, and has been learning Chinese for two years. "The lessons are interesting because our teacher explains to us what the characters mean and how they become what they are. Sometimes we also watch Chinese movies. The hardest thing is to write characters and listen to other people speak Mandarin". California has had close ties to China for many years. Since many immigrants came from China originally, the Chinese language has often been passed on by family members. What is interesting is that in the last few years, kids like Alan, who have no direct ties to China, are learning Mandarin a lot earlier and in greater numbers. Currently, more than 100 schools in California are offering Mandarin classes Spanish has always been the second most important language in many parts of the USA, although German and French are also old favorites That Mandarin, a much more exotic language, is able to penetrate this standing is due largely to China's increased global presence. Officially, there are more than 80,000 nationals from the People's Republic of China in America, including 27,000 students. But many more ethnic Chinese from all over the world live here too. Not surprisingly, interest in all things Chinese has grown - food, art, fengshui, acupuncture, gongfu, sports Bruce Lee and Jacky Chan have always held an audience, but now, so do Ang Lee and Zhang Yimou. Chinese film festivals, concerts, and even Chinese disco nights draw American audiences too.

But it is not easy teaching American kids Mandarin Many lower secondary schools offer the language as an after school activity much as football or music club is offered. So students come from different classes and ages and tend not to meet one another daily. There is also little support at home, unlike Chinese or Chinese-American children who usually attend Chinese schools run by Chinese organizations, and which follow a mainland or Taiwanese curriculum, "We all found that after a little while, Chinese classes [for American kids] slowed down and language learners became demotivated by the increasing number of complicated characters. They needed for a very long time to learn simple questions and answers. Students could not express what they really wanted to express. And, after learning so much, they still could not read interesting stuff," says Lu Wing, a teacher, interpreter and textbook author. The problems are compounded by the lack of staff and of appropriate teaching material. Many schools employ a native Chinese national who may or may not be qualified, and they are not paid very well.

The Association of Chinese Teachers in America has organized workshops and seminars to exchange ideas and resources. But the training and certification of teachers will continue to be

difficult as there is no central authority. Student numbers need to increase significantly before the various state ministries of education will get involved seriously, and students can only be attracted if good teachers exist in the first place. Wing has written a textbook which has become the official learning material for Chinese at upper secondary levels in some states. "I separated the learning of characters from the training of dialogues. This strategy allowed the students to start character learning a bit more systematically, which in itself enhances the possibilities of character training more characters are remembered in shorter time. On the other hand, without the burden of needing to read and write every single character in a dialogue text, the students were able to get on to more interesting subjects of discussion much earlier than before

Wing stresses that young learners need to learn in a fun, interactive way and encourages the use of theatre, songs, games, films, competitions, picture shows and presentations for parents and other students. "And, of course having the possibility to travel to China is one of the most attractive aims for learning the language." When asked about his opinion, Alan responded that he would like to go to China one day, but only for vacations. He may have heard that Chinese children have a much longer school day than kids in America and that they have a lot more tests! The future of Mandarin in Californian schools seems bright Some schools in various states have incorporated Mandarin into the school curriculum and are offering it as a pre-university subject Wing's earliest group of students who started as children many years ago still has regular class reunions. Many are now studying the Chinese language at an advanced level or subjects like Asian Business Management at universities. "It is always a pleasure to be invited to their meetings, seeing their progress and success is the most wonderful gift for me as their teacher," says Wing.

For questions 21-24, choose the correct answer A, B, C, or D.

21 American students like Alan McCormick

A) are becoming more interested in attending Mandarin classes.
B) think it's easy to learn to write Chinese characters.
C) will work as translators when they leave school.
D) wish Mandarin to be a global language.

22 A large number of Chinese people in America

A) are causing Mandarin to become the most taught foreign language in school.
B) are creating more interest in the Chinese culture as a whole.
C) are more interested in learning German or French,
D) are starting to learn Spanish.

23 American kids learning Mandarin

A) are often not able to get beyond the beginner level
B) get a lot of encouragement from their parents
C) need to learn according to the curriculum of schools in China or Taiwan
D) love cartoon in Mandarin

24 Mandarin teachers in America are

A) certified by the Ministry of Education in the state where they live.
B) challenged by the lack of suitable textbooks and resources
C) generally trained teachers who came from China
D) all graduated from universities in China.

For questions 25-29, decide if the following statements agree with the information given in the text.

25 All Chinese language speakers in California learn Chinese from their relatives at home.

A) True
B) False
C) Not Given

26 Chinese is becoming one of the most popular languages in the US as the number of Chinese people and the influence of China are rising there.

A) True
B) False
C) Not Given

27 All the native speaker teachers who teach Chinese in the US have sufficient qualifications in their role.

A) True
B) False
C) Not Given

28 In Wing's teaching textbooks, the characters are taught many later in lessons than the dialogues.

A) True
B) False
C) Not Given

29 Currently, the students are learning Chinese only at elementary levels in the US.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

HYPERPOLYGLOTS - A CASE OF BRAINPOWER OR HARD WORK?

In 1996, DICK HUDSON, a professor of linguistics at University College London posted an email to a list serve for language scientists asking if anyone knew who held the world record for the number of languages they could speak Replies listed the names of well-known polyglots, such as Giuseppe Mezzofanti, an eighteenth-century Italian cardinal.

Then, in 2003, Hudson received an unexpected reply to his email from someone who had belatedly come across his question. The writer, 'N', described how his grandfather, who was Sicilian and had never gone to school, could learn languages with such remarkable ease that by the end of his life he could speak seventy, and read and write fifty-six. N's grandfather was twenty when he moved to New York in the early 1900s. There he worked on the railways, which brought him into contact with travelers speaking many languages. When N was ten, he accompanied his grandfather on a cruise which took them to over 20 countries, from Venezuela to Hong Kong and Japan. N claimed that whatever port they visited, his grandfather knew the local language.

When Hudson read n's note, he immediately recognized the potential significance of the claims and posted them on the Internet. In his posting. he coined the term 'hyperpolyglot', which he defined as someone who speaks six languages or more.

Until recently, there was little scientific information about hyperpolyglots. Mezzofanti, for example, was supposed to have known seventy-two languages and to have spoken thirty-nine fluently, but nowadays such tales are often greeted with skepticism: In the discussion that followed Hudson's publication of N's claims, a reader disputed the Mezzofanti story, saying he found it absolutely preposterous and pointing out how long it would take to learn seventy-two languages. Assuming that each language has 20,000 words and that Mezzofanti could remember a word after encountering it once, he would have to learn one word a minute, twelve hours a day for five-and-a-half years! Professional linguists, too, are divided on this question. Philip Herdina, at the University of Innsbruck in Austria, is a skeptic. He doubts whether anyone has the capacity to speak seventy-two languages, arguing that maintaining this ability would take resources from other activities.

But if ability to learn many languages is the norm, why are so few people able to exploit it? Stephen Krashen, from the University of California, maintains that exceptional language learners simply work harder, and have a better understanding of how they learn. Krashen cites the case of Lomb Kato, an eighty-six-year-old Hungarian interpreter who could speak sixteen languages. Lomb apparently felt she had no special talent for languages; she had taken classes in Chinese and Polish, but the others she taught herself. According to Krashen, Lomb was an ordinary person with no special qualities, apart from a desire to learn languages and an effective way of achieving this aim.

Other researchers say that exceptional brains play a more significant role. In the 19805, neurolinguist Loraine Obler of the City University of New York found a talented language learner she called 'CJ', who could speak five languages. CJ had learned to read late, had an average IQ, and had always been a mediocre student. However, on the Modern Language Aptitude Test, he scored extremely high. His verbal memory was very good, he could remember lists of words for weeks, but he quickly forgot images and numbers, and had problems reading maps. All of this seemed to indicate that CJ's language talent was inborn and not related to a higher level of general intellectual ability.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and/or A NUMBER for each question.

N came from a family which was partly of **30** _____ origin. The evidence of unusual linguistic ability came from two relatives. The first was N's **31** _____ , who was said to speak **32** _____ languages. N witnessed this ability during a tour of more than **33** _____

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **Who thinks that successful language learning requires motivation, application, and a learning strategy?**

A) Loraine Obler
B) Stephen Krashen
C) Mezzofanti
D) Philip Herdina

35 **Language aptitude is probably inherited, not a facet of intelligence.**

A) Loraine Obler
B) Stephen Krashen
C) Mezzofanti
D) Philip Herdina

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

SCIENTISTS CHANGE PLANTS' SUNBLOCK

Biologists have thought of a new way to increase the size of crops by 20 per cent. They genetically modified the thing in plants that is responsible for photosynthesis. **Q1**_____ is the important chemical reaction where plants use sunlight to change carbon dioxide into oxygen. It lets us breathe. The scientists found a way for **Q2**_____ to use the energy they get from sunlight better, so they produce more food. Lead researcher Professor Stephen Long said his team is **Q3**_____ modifying the world's biggest crops, such as rice, wheat, maize and soybean.

The **Q4**_____ changed the thing that plants use to protect themselves from damage from the Sun's strongest rays. Plants turn their **Q5**_____ into heat when they become too hot. However, plants do this even when clouds block the Sun. The scientists put extra copies of the heat-loss genes into plants. These speed up the heat-loss process so the plants can quickly return to using energy to grow. This could help the world's food needs. Professor Long said if he could get 20 per cent more **Q6**_____ from crops, it would reduce the future pressure on food supply.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. Mark your answers on the answer sheet.

A) **Davidson's** This traditional-looking store opened in 1860, and still offers high-class, fashionable goods at reasonable prices, with many made from natural materials. The men's clothes are particularly recommended, and there's also an area selling nothing but beautiful jewellery. And on fine days, try the rooftop restaurant – the food is fantastic.

B) **Bartons** If you're in town looking for a bargain don't forget to pay us a visit. Situated in the heart of the shopping mall, our popular sale has everything for the professional man, including suits, shirts and shoes. Don't forget our roof-top café! Late-night shopping Monday to Friday.

C) **Hallwick's** People often visit Hallwick's just for the displays of lights that make it so attractive to shop here. And it was the first to sell clothes made of pure, natural cotton, grown in conditions that avoid creating pollution. The assistants are polite and will help with any questions about goods.

D) **Design Corner** We're a new shop in the old part of town and away from the crowds. But there's nothing old about our goods. We sell dresses, skirts and blouses made by local designers, and beautiful posters, pens and pencils that will look great in the office or on a student's desk.

E) **Stafford's** This store is popular for its range of good-quality sportswear at very reasonable prices, which is hard to find elsewhere. And on the ground floor, you'll find displays of their famous handmade candies – great for celebrations! And Stafford's is always the first to offer new designs in men's and women's clothing, too!

F) **Henry's** Henry's is known for its high-quality clothing, as our users' comments prove, whether that's dresses, skirts or stylish suits. Our highly experienced staff will measure you and make sure you get the perfect fit. A little more expensive than the high street shops but worth every penny.

G) **Crozier's** This store is in a beautiful new building. One floor is full of toys and board games like chess, and downstairs there's a huge variety of cakes, sweets and also fresh food that's perfect for making a meal! The roof garden is popular here in summer, and the friendly staff serve delicious lunches.

H) **Barton's** Barton's has been here since it opened in 1930, and still has its huge glass door and beautiful windows. The first floor is fantastic for children, as it's packed with things to play with – at reasonable prices. And downstairs, you'll find a huge selection of amazing fresh food rarely found elsewhere.

I) **Wedges** Take a break while you're shopping and try our delicious home-cooked hot meals. Popular with students, everything is reasonably priced. While you're here have a look at some of the second-hand clothes we have available.

J) **Stella's Boutique** Late-night shopping in Stella's boutique. Many of our clothes are on special offer, with some items two for the price of one. Visitors can also enjoy locally made cakes and snacks in our café. Just a short two-minute walk from the train station.

7

Jasmine would like to find a store where they can eat outside, and her dad wants somewhere known for its good-quality suits. They also want to buy a necklace for Jasmine's mum.

8

Peter wants to buy some special sweets for his grandma's birthday, and his older sister, Nell, wants to see the latest women's fashions. They also need to buy new tennis T-shirts, without spending a lot.

9

Jim wants to buy some new shoes for work. He needs something reasonably cheap and, as he's working long hours, he needs a shop that is open late during the week.

10

Hamid wants a shop where he can get measured for a new suit. He is happy to spend quite a lot but wants a place that has been recommended by other customers.

11

Maria wants a store selling clothes that use materials produced without damaging the environment. Her mum would like somewhere that has great customer service and is beautiful inside.

12

John enjoys cooking, and wants to buy some unusual ingredients. His parents like stores that have been in the same buildings since they were young, and that have great toys for John's young sister.

13

Sheila wants to go shopping after she finishes work. She wants to buy an inexpensive dress or a skirt and would like to eat something made locally before her train leaves.

14

Natalie is looking for a gift for her daughter who has passed her exams. She'd like to buy her something for university and wants to avoid the busy shopping centre.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

List of Headings:

1) Musical performance
2) Attractive landscape
3) Perfect holidays
4) Portrait of a girl
5) Film for all ages
6) Exciting hobby
7) Colourful festival
8) Interesting book

15. Paragraph A **16. Paragraph B** **17. Paragraph C**
18. Paragraph D **19. Paragraph E** **20. Paragraph F**

READING

A. This is a full-length (ninety minutes) cartoon, which is entertaining for both adults and children over six. The animation and colour are of very high quality and the story has lots of fun and excitement. The plot is quick moving and full of surprises. There's romance, action, comedy, music and lots of fantastic songs and dances.

B. This is a full-blooded magnificently written portrait of history's most fascinating woman. Readers will lose themselves for hours in this richly entertaining novel full of dramatic twists and turns. From the spectacular era that bears her name comes the spellbinding story of Elizabeth I – her tragic childhood, her confrontation with Mary, Queen of Scots and her brilliant reign.

C. The young woman is shown in a "shepherdess" hat and white dress, recalling a classical chiton. The background landscape, common in such paintings, seems to indicate the heroine's closeness to nature, to the ordinary joys of life. The painter's colour range – at times as translucent as porcelain, at others muted like mother-of-pearl – is based upon subtle plays of gray and green, light blue and pink.

D. In this picture one is struck by the artist's absolute mastery in portraying natural details, whether the dry, sandy soil of the forest, the clear stream of water in the foreground, the yellow bark and fluffy needles of the pines, or the sense of a bright, clear, calm summer day. The artist managed to create an image familiar to anyone who has seen a Russian forest.

E. Have a good time on the most lively and exciting island in the Caribbean. Relax under a palm tree on the white sandy beaches. Swim in the clear, blue sea. Listen to the bands playing Calypso music. Or get really adventurous and go scuba diving for sunken treasure on the sea bed. Join in the many cultural celebrations we offer, for example the sugar harvest festival.

F. This event is considered the greatest attraction for visitors to the Isle of Man. No definite date can be given, but it is normally held between 5th and 15th July. The Pageant begins at about 8 p.m. First we are given a glimpse of village life in Celtic times. Then suddenly Viking long ships appear and then there are scenes of war. Then Celts and Vikings unite, and the Manx nation is born. The actual Pageant is followed by a grand torchlight procession and firework display.

PART 4

Questions 21–29

Read the following text for questions 21-29.

THE INTRODUCTION TO A NEW BIOGRAPHY

Alexander Pushkin was not only Russia's greatest poet, but he was also the great-grandson of an African slave. The slave, whose godfather was Peter the Great, claimed to have royal blood of his own. Certainly his Russian descendants believed that he was an African prince. His descendants have included members as well as close friends of the English royal family. So the legend goes on.

Pushkin told the story of his black ancestor in 'The Negro of Peter the Great', but this biography tells a different version. The main difference is between fact and fiction. The Russian poet hoped to discover a biographical truth by sticking to the facts, only to discover that facts are slippery and not always true. His biography turned into a novel. Even then, it was left unfinished after six and a half chapters. The scrawled manuscript comes to an end with a line of dialogue – 'Sit down, you scoundrel, let's talk!' – and a line of dots. Pushkin could be speaking to himself. In any case, it's now time to stand up and carry on with the story. I have tried to join up the dots.

This is a book, then, about a missing link between the storyteller and his subject, an African prince; between the various branches of a family and its roots; between Pushkin and Africa; Africa and Europe; Europe and Russia; black and white. It is the story of a remarkable life and it poses the question: how is such a life to be explained?

My own explanation began in 2001, while I was living in Russia and working there as a journalist. The first draft was written during the war in Afghanistan, on the road to Kabul, but it describes my journey to the frontline of a different kind of war in Africa between the armies of Ethiopia and Eritrea. According to legend, Pushkin's ancestor was born there, on the northern bank of the River Mareb, where I was arrested for taking photographs and compass readings, on suspicion of being a spy.

Our lives today would be very different if Thomas Edison had never lived. Born in 1847, Edison became the most active of all inventors in the late 19th and early 20th centuries. His inventions influenced life all around the world.

Edison's teachers at school did not recognize his brilliance. In fact, they considered him a rather bad student. Fortunately, his mother thought differently. She took him out of school and taught him at home, which is when he developed his two lifetime passions: reading and experimenting.

His first job was as a telegraph operator, and his first important inventions were improved telegraphic devices. But he first became famous for the phonograph, invented in 1877. Today, in the age of MP3 players, it's hard to imagine how magical the phonographic recording was. The public loved the new machine and a form of it was used well into the late 20th century.

Edison is often credited as the inventor of the light bulb, though, of course, many people worked on the idea both before and after him. In 1878 he formed the company Edison Electric Light Company and in 1879 introduced his improvements to the incandescent light bulb. At about this time, he became famous for saying, "We will make electricity so cheap that only the rich will burn candles." His inventions also influenced the development of radiology and the first motion picture cameras.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 The slave's Russian descendants believe that the slave
A) had Russian royal blood in him.
B) was Peter the Great's godfather.
C) belonged to the royal family in his native land.
D) was a close friend of the English royal family.

22 According to the narrator, the biography of Pushkin's ancestor turned into a novel because Pushkin
A) didn't like the true biographical facts he had discovered.
B) found it impossible to stick to the facts that were doubtful.
C) could not do without describing fictional events.
D) found the true facts of the slave's biography uninspiring.

23 The narrator's objective in writing the book was to
A) write a new version of the novel 'The Negro of Peter the Great'.
B) continue the story from where it was left unfinished.
C) interpret the storyteller's attitude to his ancestor.
D) prove that Pushkin's ancestor was an African prince.

24 The narrator says that his research for the book
A) brought him to Russia to work as a journalist.
B) made him go to the war in Afghanistan.
C) led him to take part in the war in Africa.
D) brought him to a river bank in Africa.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 The inventions of Thomas Edison still have an enormous influence on our life.
A) True
B) False
C) Not Given

26 Edison was taught at home because of his health problems.
A) True
B) False
C) Not Given

27 Edison was fond of reading and science since childhood.
A) True
B) False
C) Not Given

28 When it was first invented, phonograph struck people as a magical thing.
A) True
B) False
C) Not Given

29 Edison was against burning candles.
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

RESEARCH ON IMPROVING AGRICULTURAL YIELDS IN AFRICA

More than half of the global population growth between now and 2050 is expected to occur in Africa. And more people means a requirement for more food.

Ethiopia, for example, has the largest livestock population in Africa but with a growing population, even its 53 million cattle are not enough. And now efforts to develop farming there are bringing a significant health concern. Professor James Wood from the University of Cambridge explains that new breeds that are being introduced are more vulnerable to bovine TB (tuberculosis) than the zebu cattle which were previously reared there. 'This may have health implications for those who work with and live alongside infected cattle, and also raises concerns about transmission to areas which previously had low levels of TB,' he warns.

Wood leads a research programme which is looking at the feasibility of control strategies, including cattle vaccination. The programme brings together veterinary scientists, epidemiologists, geneticists, immunologists and social scientists in eight Ethiopian and UK institutions. 'We need this mix because we are not only asking how effective strategies will be, but also

whether farmers will accept them, and what the consequences are for prosperity and wellbeing,' says Wood.

The impact that increasing productivity can have on farmers' livelihoods is not lost on an insect expert at the University of Ghana, Dr Ken Fening, who is working on another food-related research project. Cabbages are not indigenous to Africa but have become a major cash crop for Ghanaian farmers and an important source of income for traders from markets and hotels. 'A good crop can bring in money to buy fertilisers and farm equipment, and also help to pay for healthcare and education for the family,' he says. Recently, however, fields of stunted, yellowing cabbages, their leaves curled and dotted with mould, have become a familiar and devastating sight for the farmers of Ghana.

From his field station base in Kpong, Ghana, Fening works closely with smallholder farmers on pest-control strategies. Two years ago they started reporting that a new disease was attacking their crops. 'It seemed to be associated with massive infestations of pink and green aphids,' says Fening, 'and from my studies of the way insects interact with many different vegetables, I'm familiar with the types of damage they can cause.'

What's more, the virus was not what they expected, and work is now ongoing to identify the culprit. The sooner it can be characterised, the sooner sustainable crop protection strategies can be developed to prevent further spread of the disease not only in Ghana, but also in other countries in the region. Another researcher who hopes that eradication strategies will be the outcome of her research project is Dr Theresa Manful. Like Fening, she is a researcher at the University of Ghana. She has been working with Cambridge biochemist Professor Mark Carrington on a disease known as trypanosomiasis.

'This is a major constraint to cattle rearing in Africa,' she explains. 'Although trypanosomiasis is also a disease of humans, the number of cases is low, and the more serious concerns about the disease relate to the economic impact on agricultural production.'

The parasite that causes the disease is carried by the tsetse fly, which colonises vast swathes of sub-Saharan Africa. Carrington says that a lot is now known about the parasite's molecular mechanisms, in particular the way it evades the immune system of the animal acting as its host by altering the proteins in its coat so as to remain 'invisible'. 'But then when you look at the effect on large animals, you realise that there is almost nothing known about the dynamics of an infection, and even whether an infection acquired at an early age persists for its lifetime,' he says. So Manful and Carrington set about testing cattle in Ghana. They discovered that nearly all were infected most of the time.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Trypanosomiasis is a disease caused by a parasite which is spread by an insect called the **30** _____ fly. The parasite can remain unaffected by the host's **31** _____ system because it is able to change the **32** _____ on its outer covering. It is uncommon among humans but has been found to affect most **33** _____ in Ghana.

For questions 34-35, choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

34 What is the main problem faced by cattle farmers in Ethiopia, according to Professor Wood?

A) TB is being transmitted from people to cattle.
B) New breeds of cattle have led to an increase in TB.
C) The traditional breeds of cattle are being affected by TB.
D) TB has spread into places where it was previously unknown.

35 When discussing the cultivation of cabbages in Ghana, the writer says that this crop

A) was introduced from outside Africa.
B) is not eaten much by local people.
C) is not grown correctly by many farmers.
D) requires the use of fertiliser and special equipment.

MOCK TEST 62

5 parts · 35 questions

60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

Breathing in air pollution could change our brain. A new study shows that car fumes can **Q1**_____ how our brain is wired – how parts of the brain connect with other parts. The research is from the University of British Columbia in Canada. Researchers found that car fumes can change our brain's connectivity in just two hours. A **Q2**_____ Professor Chris Carlsten, was surprised at what he found. He said: "For many decades, scientists thought the brain may be protected from the harmful effects of air pollution." He added: "This study, which is the first of its kind in the world, provides fresh evidence supporting a connection between air pollution and thinking."

The traffic pollution study was on 25 adults. The researchers asked the adults to breathe in car fumes in a laboratory. The research team took brain scans of the **Q3**_____ for two hours. The **Q4**_____ showed that networks in the brain that we use for thinking and remembering changed. There were fewer connections between the **Q5**_____ Another professor said the research was worrying. She said: "It's concerning to see traffic pollution interrupting these networks." The researchers said there needed to be more research to see how car fumes change our brain. They also advised people to close car windows when in traffic. The **Q6**_____ of the 25 people returned to normal after they breathed clean air.

PART 2

Questions 7–14

The people below all want to visit somewhere. There are descriptions of places (A-K). Decide which place would be the most suitable for the people below.

A) **Mill Lane** You'll see lots of animals on this walk, because there is nothing to disturb them. Walkers often say they meet no-one. There are places where you can join or finish the walk but these are not well signposted and it is easy to get lost.

B) **Sea Path** This walk starts at the village of Nye Flats and the excellent signposts lead you through local streets, fields and pretty neighbouring villages. Although it will take you half a day, there are no hills at all. You can breathe the sea air and enjoy watching traditional life in busy villages.

C) **Cutters Way** This walk can take anything from 30 minutes to two hours. It's not a good walk for hill-lovers as the ground is completely flat, but it has good signposts and simple facilities for the hungry or thirsty walker. A few places or things to see would improve this walk, which can be a little dull.

D) **Paddock Way** This is really a short track across a working farm. There are plenty of chickens and sheep to see, and the farmer has turned some of the buildings into an educational centre with a café. Not a walk for those who like peace and quiet, but good fun.

E) **Hurdles** This is a route for the experienced walker. It crosses two rivers and includes hills of up to 500 metres, from which you can see the sea. There are several rocky paths that are unsuitable for children or older people and there are no shops so take plenty of water.

F) **Neverland** This is a walk to take if you have a whole day to spare and want to escape from other people. It follows a narrow track which is clearly marked and has different routes for different types of walker. There are hills to climb but views are limited because of thick forest.

G) **Overhill** This sounds like a difficult walk but it's really easy, although it could be better signposted. If you're a local person, you're almost certain to meet someone you know on the walk. It's a couple of kilometres outside the village of Overhill, with fields full of rabbits!

H) **Gold-Diggers End** You won't find any gold on this peaceful walk, but you will find plenty of other things to see including a lovely garden which is open to the public. It's a half-hour walk with a couple of small cafés on the way.

I) **Dive Worldwide** With resorts around the Canary Islands, we have a variety of great scuba diving sites for you to choose from. We are all professional divers ourselves and understand what makes a perfect diving holiday. DVT dive centres are available for adults and children 12 years and above.

J) **The Spanish Pyrenees** A multi activity adventure holiday in Spain that will see you explore the Spanish Pyrenees with a number of guided tours – walking, climbing , rafting and canyoning. We'll also visit Zaragoza which is a treasure trove of cultural and historical gems. Tourists will find many magnificent buildings and ancient Roman ruins.

K) **Baobab Travel** This is an incredible family adventure holiday full of discovery, nature and activity, for fun seeking families wanting an amazing adventure close to home. From the mountain to the coast, Catalonia offers a beautiful and diverse location for this incredible multi-activity holiday.

7

You enjoy walking but you have injured your knee and cannot climb up hills. You would like to spend a couple of hours on a quiet walk with well-marked paths.

8

You like to get as much exercise as possible and particularly like climbing steep hills to get a good view. You want to do a walk that is difficult and offers a range of scenery.

9
You have two sons of 8 and 10. You would like to take them to see some animals in the countryside. You want to be able to buy some refreshments.

10
You have had an operation and need plenty of fresh air to help your recover. You want to find a short, quiet walk with a beautiful place to visit on the route.

11
Your grandparents are staying with you. They are very fit and enjoy walking. They would like to visit some of the local villages and need a clearly-marked route so they don't lose their way.

12
Alan and Mike would like to spend some time in a seaside town where they can do water sports and be taught some basic diving using an air tank.

13
You are studying architecture and prefer holidays where you can follow this interest. You also want to try some thrilling outdoor activity.

14
You need a rest after working hard, but you wouldn't like to go to the seaside. You want to find a holiday that combines opportunities to meet friendly people and visit more than one country.

PART 3 Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:
A) One possible source of inaccuracies
B) Less time doing chores
C) A difference between perception and reality
D) The view of extra leisure time
E) Americans are working harder
F) Significantly more free time
G) The effect of including retirees
H) The need for a wider description of work
I) An effective system for measuring time spent
J) How Americans think about their time

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

LEISURE TIME IN AMERICA

1. A pair of economists have looked closely at how Americans actually spend their time. Mark Aguiar, at the Federal Reserve Bank of Boston and Erik Hurst, at the University of Chicago's Graduate School of Business constructed four different measures of leisure. The narrowest includes only activities that nearly everyone considers relaxing or fun; the broadest counts anything that is not related to a paying job, housework or errands as "leisure". No matter how the two economists slice the data, Americans seem to have much more free time than before.

2. Over the past four decades, depending on which of their measures one uses, the amount of time that working-age Americans are devoting to leisure activities has risen by 4-8 hours a week. For somebody working 40 hours a week, that is equivalent to 5-10 weeks of extra holiday a year. Nearly every category of American has more spare time: single or married, with or without children, both men and women. Americans may put in longer hours at the office than other countries, but that is because average hours in the workplace in other rich countries have dropped sharply.

3. How then have Messrs Aguiar and Hurst uncovered a more relaxed America, where leisure has actually increased? It is partly to do with the definition of work, and partly to do with the data they base their research upon. Most American labour studies rely on well-known official surveys, such as those collected by the Bureau of Labour Statistics (BLS) and the Census Bureau, that concentrate on paid work. These are good at gleaning trends in factories and offices, but they give only a murky impression of how Americans use the rest of their time. Messrs Aguiar and Hurst think that the hours spent at your employer's are too narrow a definition of work. Americans also spend lots of time shopping, cooking, running errands and keeping house. These chores are among the main reasons why people say they are so overstretched, especially working women with children.

4. However, Messrs Aguiar and Hurst show that Americans actually spend much less time doing them than they did 40 years ago. There has been a revolution in the household economy. Appliances, home delivery, the internet, 24-hour shopping, and more varied and affordable domestic services have increased flexibility and freed up people's time.

5. The data for Messrs Aguiar and Hurst's study comes from time-use diaries that American social scientists have been collecting methodically, once a decade, since 1965. These diaries ask people to give detailed information on everything they did the day before, and for how long they did it. The beauty of such surveys, which are also collected in Australia and many European countries, is that they cover the whole day, not just the time at work, and they also have a built-in accuracy check, since they must always account for every hour of the day.

6. Do the numbers add up? One thing missing in Messrs Aguiar's and Hurst's work is that they have deliberately ignored the biggest leisure-gainers in the population, the growing number of retired folk. The two economists excluded anyone who has reached 65 years old, as well as anyone under that age who retired early. So America's true leisure boom is even bigger than their estimate.

PART 4 Questions 21–29

Read the following text for questions 21-29

GLOBAL WARMING

Day after day we hear about how anthropogenic development is causing global warming. According to an increasingly vocal minority, however, we should be asking ourselves how much of this is media hype and how much is based on real evidence. It seems, as so often is the case, that it depends on which expert you listen to, or which statistics you study. Yes, it is true that there is a mass of evidence to indicate that the world is getting warmer, with one of the world's leading weather predictors stating that air temperatures have shown an increase of just under half a degree Celsius since the beginning of the twentieth century. And while this may not sound like anything worth losing sleep over, the international press would have us believe that the consequences could be devastating. Other experts, however, are of the opinion that what we are seeing is just part of a natural upward and downward swing that has always been part of the cycle of global weather. An analysis of the views of major meteorologists in the United States showed that less than 20% of them believed that any change in temperature over the last hundred years was our own fault – the rest attributed it to natural cyclical changes.

There is, of course, no denying that we are still at a very early stage in understanding weather. The effects of such variables as rainfall, cloud formation, the seas and oceans, gases such as methane and ozone, or even solar energy are still not really understood, and therefore the predictions that we make using them cannot always be relied on. Dr. James Hansen, in 1988, was predicting that the likely effects of global warming would be a raising of world temperature which would have disastrous consequences for mankind: "a strong cause and effect relationship between the current climate and human alteration of the atmosphere". He has now gone on record as stating that using artificial models of climate as a way of predicting change is all but impossible. In fact, he now believes that, rather than getting hotter, our planet is getting greener as a result of the carbon dioxide increase, with the prospect of increasing vegetation in areas which in recent history have been frozen wastelands.

In fact, there is some evidence to suggest that as our computer-based weather models have become more sophisticated, the predicted rises in temperature have been cut back. In addition, if we look at the much reported rise in global temperature over the last century, a close analysis reveals that the lion's share of that increase, almost three quarters in total, occurred before man began to "poison" his world with industrial processes and the accompanying greenhouse gas emissions in the second half of the twentieth century.

So should we pay any attention to those stories that scream out at us from billboards and television news headlines, claiming that man, with his inexhaustible dependence on oilbased machinery and ever more sophisticated forms of transport is creating a nightmare level of greenhouse gas emissions, poisoning his environment and ripping open the ozone layer? Doubters point to scientific evidence, which can prove that, of all the greenhouse gases, only two percent come from man-made sources, the rest resulting from natural emissions. Who, then, to believe: the environmentalist exhorting us to leave the car at home, to buy re-usable products packaged in recycled paper and to plant trees in our back yard? Or the sceptics, including, of course, a lot of big businesses who have most to lose, when they tell us that we are making a mountain out of a molehill? And my own opinion? The jury's still out as far as I am concerned!

21 As to the cause of global warming, the author believes that ...

A) occasionally the facts depend on who you are talking to
B) the facts always depend on who you are talking to
C) often the facts depend on which expert you listen to
D) you should not speak to experts

22 More than 80% of the top meteorologists in the United States are of the opinion that...

A) global warming should make us lose sleep
B) global warming is not the result of natural cyclical changes, but man-made
C) the consequences of global warming will be devastating
D) global warming is not man-made, but the result of natural cyclical changes

23 Our understanding of weather...

A) leads to reliable predictions
B) is variable
C) cannot be denied
D) is not very developed yet

24 Currently, Dr. James Hansen's beliefs include the fact that ...

A) It is nearly impossible to predict weather change using artificial models
B) the consequences of global warming would be disastrous for mankind
C) there is a significant link between the climate now, and man's changing of the atmosphere
D) Earth is getting colder

Do the following statements agree with the information given in Reading Passage?

25 At the same time that computer-based weather models have become more sophisticated, weather forecasters have become more expert.

A) True
B) False
C) Not Given

26 Most of the increase in global temperature happened in the second half of the twentieth century.

A) True
B) False
C) Not Given

27 The media wants us to blame ourselves for global warming.

A) True
B) False
C) Not Given

28 The media encourages the public to use environmentally friendly vehicles, such as electric cars to combat global warming.

A) True
B) False
C) Not Given

29 **Environmentalists are very effective at persuading people to be kind to the environment.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE HIDDEN LIVES OF SOLITARY BEES

Ian Beavis is a naturalist and blogger with a mission to raise the profile of the many solitary bees, whose pollinating services are so important, yet so little recognised. Solitary bees inhabit gardens, parks, woodlands, fields and cliffs. In fact they represent 95% of the world's bee species. Leading wildlife illustrator Richard Lewington, best known for his beautiful paintings of butterflies, says, 'Solitary bees are so useful to gardeners and commercially valuable. Yet until recently they barely registered in the public consciousness. I wanted to help publicise their vital role in our lives.' The problem with solitary bees has long been one of identification - with more than 240 species to choose from, and no accessible guidebook, where do people start? So Richard Lewington has spent any spare time over the past few years working on a new guide to the bees of Great Britain and Ireland. This, amazingly, is the first book of its kind to be published for over a century.

How do solitary bees live? A female solitary bee constructs a nest and then lays her eggs in individual cells, lining or sealing them with various materials depending on the species of bee - red mason bees use mud, leafcutter bees use sections of leaf. The female leaves what naturalists call a 'parcel' of pollen and nectar for each of her little grubs to feed on. When the female has laid all her eggs, she dies. The emerging grubs eat, grow and develop into adults the following year.

While some bees are plentiful and widespread, others have been designated as rare, or are very local in distribution. In 2013, Ian Beavis came across what has long been known as one of Britain's rarest species, the banded mining bee. An impressive species with white hairs on its face, the banded mining bee nests in the ground, typically on steep banks. Ian Beavis explains that it always chooses bare earth because it doesn't like having to eat through plant roots to make its nest. Females feed on a variety of plants, but seem particularly fond of yellow dandelions that bloom from spring to autumn.

Another bee that has attracted naturalists' attention is the ivy bee. It was only identified as a distinct species in 1993. It is one of a number of bees that have been able to establish themselves in Britain due to the recent warmer winters. About the same size as a honeybee, with distinctive orange-yellow banding on its abdomen, it was initially thought to feed only on ivy, but has since been seen visiting other plants.

The discoveries about ivy bees show how rewarding the study of solitary bees can be but it's not the only species whose habits are changing. Ian Beavis believes we can see in solitary bees the beginning of social behaviour. He explains that many species make their nests close to each other in huge groups, and there are some, like Andrena scotica, where several bees use the same entrance without becoming aggressive. It's not difficult to see how this behaviour, which could be seen as the foundation of social behaviour, might evolve in future into worker bees sharing care of the grubs. Indeed some of Britain's solitary bees, Lasioglossum malachurum for example, are already demonstrating this type of social behaviour. So will all solitary bees evolve into social insects? Not necessarily. According to Ian Beavis, there are advantages to social behaviour but there are also advantages to nesting alone. Bees that nest socially are a target for predators, diseases and parasites.

Pesticides can also pose a threat to solitary bees. At the University of Sussex in England, Beth Nicholls is conducting research into the effects of certain pesticides on the red mason bee. She explains, 'We know that pesticides harm social bees, but very little research has been done into solitary bees.' Honeybees fly throughout the summer, so they may be exposed to different levels of pesticides. But if the shorter flight period of solitary bees - the red mason bee only flies from March to May - coincides with peak pesticide levels, that might be disastrous. If the red mason bee declines dramatically, it could affect the fruit growing industry. According to Beth Nicholls, it is much more efficient at pollinating orchard trees. Social bees carry pollen in 'baskets' on their back legs, but a female red mason bee carries it on the underside of her abdomen. This is a messier way of transporting it, and so more pollen is transferred to other flowers. The social bees' method is much 'tidier', so once they have collected the pollen and tucked it away behind their legs, it won't be dropped. Solitary bees are all around us. We need to start paying attention to them before it's too late.

Choose ONE WORD ONLY from the text for each answer 30-35

Female solitary bees make their nests with separate **30** _____ where single eggs are deposited. Females try to ensure the survival of all their **31** _____. They do this by providing suitable food in what is referred to as a **32** _____. Solitary bees use a range of substances to make their nests comfortable and secure, such as plant material or **33** _____.

34 **What does the writer think is surprising about the new book on bees?**

A) There is such a wide range of species in it.
B) Some of the species in it are hard to differentiate.
C) Richard Lewington chose to give up his main work to write It.
D) It was so long since a guide like this had been produced.

35 **What is one of the reasons solitary bees are important for gardeners?**

A) They produce honey in large quantities
B) They pollinate orchard trees more efficiently than social bees
C) They are easy to identify due to their distinctive colors
D) They live in large colonies that protect the plants

MOCK TEST 63

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

SWISS CHEESE

Switzerland is a country famous for producing cheese. However, it is now importing more **Q1**_____ than it exports for the first time. The reason is that Switzerland opened up its milk market. Other countries can sell **Q2**_____ in Switzerland. This means it is difficult for Swiss farmers to compete with cheaper, imported milk. Many dairy farmers have given up because they cannot make a profit. This has decreased the quantity of cheese made in **Q3**_____. The Swiss Dairy Association said the country can now only make enough cheese for its own population.

Swiss cheese is well known for its high quality. It is often on the menu of restaurants worldwide. However, **Q4**_____ and supermarkets are replacing Swiss cheeses with those from other countries. Even though Switzerland is exporting less cheese, the **Q5**_____ are still big cheese eaters. They are eating more cheese than ever. Swiss people ate an average of 22.9 kg per person last year. A dairy farmer was sad to see dairy farms disappearing. She said: "Cheese is a big part of life in Switzerland. We need our **Q6**_____, and cheese."

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use. Mark your answers on the answer sheet.

A) Those who want to be reminded of an earlier age of travel will like this suitcase.

B) This suitcase is for those who wish to purchase expensive luggage.

C) The manufacturer is confident that this suitcase will last a long time.

D) This course is for people who want to do more than follow instructions.

E) You do not have to pay for any of the features on this app.

F) It is easy to choose one of these suitcases to match most clothing.

G) After taking this course, participants will be able to teach their skills to others.

H) This suitcase is the right one for people who like to follow the latest fashion.

I) You can pay to download true stories on this app.

J) Items in this suitcase will not be affected if it gets wet.

7

Briggs and Riley Weekender A weekend suitcase that's sophisticated and unusually spacious for its type. The strong nylon outer fabric is water and abrasion resistant, so it should handle any knocks without showing signs of damage.

8

Mulberry Scotchgrain Trimmed in brown leather, with gold details, this bag from the renowned fashion house is a truly indulgent buy. If you're investing this much in a suitcase then you'd better be planning an amazing holiday to go with it.

9

Tripp Holiday Simple and affordable, the Tripp range offers a great selection of tough cases. They also come in a huge range of cheerful colours that should go with anything you choose to put on, and you'll definitely be able to spot it on the luggage carousel at the airport.

10

Eastpak Tranverz Holdall For those who want something in between an annual holiday suitcase and a weekend bag, this is a fantastic compromise. With two wheels and a telescopic handle, the bag is guaranteed for 30 years. Did we mention it also comes in colourful leopard print?

11

Herschel Parcel From the brand behind some of today's most popular rucksacks, this suitcase really is a delight. Custom printed, with Herschel's signature leather toggles this well-crafted case is as cool, stylish and up to date as they come.

12

The Diplomat Travel in style with this beautiful suitcase that goes back to the days when trains ran on steam and air travel was leisurely. The leather case, part of the Steamline Luggage range, features roller wheels and a metal frame to hold it in shape.

13

Pacer Although they were previously split into 'pro' and 'free' versions, Pacer's developer now generously includes all the features in one free app. That means you can spend no money, yet use your smartphone's GPS capabilities to track your jogging routes, and examine details of your pace and calories burned.

14

Cooking for today These are classes for those of you who can already make basic meals by keeping strictly to a simple recipe, but who would now like to use your imagination as well. We'll learn how to make great family meals, discovering how to develop basic recipes into personal creations, with a few tricks and tips to help you become more confident.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

List of Headings:

1) Ecological system
2) Mountains formation
3) Geology
4) Social significance
5) Climate
6) Definition of the term
7) Fold mountains
8) Volcanoes

15. Paragraph A **16. Paragraph B** **17. Paragraph C**
18. Paragraph D **19. Paragraph E** **20. Paragraph F**

READING

A. A mountain is a large landform that stretches above the surrounding land in a limited area, usually in the form of a peak. A mountain is generally steeper than a hill. Mountains are formed through tectonic forces or volcanism. These forces can locally raise the surface of the earth. Mountains erode slowly through the action of rivers, weather conditions, and glaciers.

B. There are three main types of mountains: volcanic, fold, and block. All three types are formed from plate tectonics: when portions of the Earth's crust move, crumple, and dive. Surface rock is forced upward, creating a landform higher than the surrounding features. The height of the feature makes it either a hill or, if higher and steeper, a mountain.

C. When the magma reaches the surface, it often builds a volcanic mountain, such as a shield volcano or a stratovolcano. Examples of volcanoes include Mount Fuji in Japan and Mount Pinatubo in the Philippines. The magma does not have to reach the surface in order to create a mountain: magma that solidifies below ground can still form dome mountains, such as Navajo Mountain in the United States.

D. The whole process causes the surface of mountains to be younger than the rocks that form the mountains themselves. Glacial processes produce characteristic landforms, such as pyramidal peaks, knife-edge aretes, and bowl-shaped cirques that can contain lakes. Plateau mountains, such as the Catskills, are formed because of the changes of an uplifted plateau.

E. The weather in mountains becomes colder at high elevations, due to the way that the sun heats the surface of the Earth. The sun warms the ground directly, while the greenhouse effect acts as a blanket, reflecting heat back towards the Earth that would otherwise be lost to space. The greenhouse effect thus keeps the air at low elevations warm.

F. The colder climate on mountains affects the plants and animals residing on mountains. A particular set of plants and animals tend to be adapted to a relatively narrow range of climate. Some plants and animals found in altitudinal zones tend to become isolated since the conditions above and below a particular zone will be inhospitable and thus constrain their movements or dispersal.

PART 4

Questions 21–29

Read the following text for questions 21-29.

Emily woke up before her alarm went off and knew instantly something wasn't quite right in the house. Bailey, her chocolate-coloured pet Labrador, should have been there at the bedroom door demanding food but there was no sound of him. She decided to get up and go and see where he was. It felt cold in the hall but she knew she had left the heating on last night. As she walked down the stairs she heard a noise in the kitchen; the strange feeling that something was wrong was getting stronger. What was going on? She got to the bottom of the stairs and opened the door to the living room, which led to the kitchen. Why was the door closed? She always left it open. Bailey was nowhere to be seen and his toys, which were usually all over the living room floor, were in a neat pile in the corner next to his basket. Had they been there when she had gone to bed last night? She couldn't remember. She walked into the kitchen and turned the light on, it didn't work, nothing happened. She stood very still and listened, nothing. There wasn't a sound. That was really strange; she lived in the middle of a busy city, there were always people around. She woke up to the sound of traffic, car horns, police cars, her neighbours shouting in the house next door, how could there be silence at 8 o'clock on a Friday morning? She went back into the living room and turned the TV on, but again nothing happened. She went back into the kitchen and looked out of the window; it was a bright clear day. The back door was shut but when she tried the handle she realised it was unlocked. She walked out into the tiny back garden and opened the back gate; still nothing, not a sound and no sign of Bailey. She called him but he didn't come. She went back into the house and did what she realised she should have done as soon as she got up and called her mother.

The history of Petergof

Petergof or Peterhof, known as Petrodvorets, from 1944 to 1997, is a municipal town in Petrodvortsovy District of the federal city of St. Petersburg, located on the southern shore of the Gulf of Finland.

In the time of Peter the Great, the sea floor just north of the Petergof site and to the east toward St. Petersburg was too

shallow for either commercial ships or warships. However, to the west of Petergof, the sea floor dropped off to be deep enough for sea vessels. Accordingly, when Peter the Great decided to build St. Petersburg at the eastern end of the Gulf of Finland, he first captured the Kotlin Island clearly visible from the Petergof site just to the northeast in the middle of the Gulf. At Kotlin Island he would build the commercial harbor for St. Petersburg as well as the Kronshtadt fortifications across the 20 kilometers of shallow sea to save provision and defend the Navy that he would build.

Peter the Great first mentions the Petergof site in his journal in 1705, during the Great Northern War, as a good place to construct a landing appropriate for traveling to and from the island fortress of Kronshtadt. In 1714, Peter began construction of the Monplaisir Palace. The construction based on his own sketches of the palace that he wanted to have close to the shoreline. This was Peter's Summer Palace that he would use on his way coming and going from Europe through the harbor at Kronshtadt.

On the walls of this seacoast palace hundreds of paintings that Peter brought from Europe hung. In the seaward corner of his Monplaisir Palace, Peter made his Maritime Study from which he could see Kronshtadt Island to the left and St. Petersburg to the right. Later, he expanded his plans to include a vaster royal chateau of palaces and gardens into the further inland, according to the model of Versailles. Each of the Tsars after Peter expanded the inland palaces and gardens of Peterhof, but the major contributions by Peter the Great were completed by 1725. Peter had also entertained plans of a similar palace at Strelna, a short way to the east, but these plans were abandoned.

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 How did Emily know there was something wrong?
A) Her alarm clock didn't go off.
B) Her dog wasn't outside the bedroom door.
C) Her dog was quieter than usual.
D) She had woken up very early.

22 How did she feel when she opened the living room door?
A) confused
B) excited
C) annoyed
D) strong

23 What could she hear when she stood in the kitchen?
A) traffic and everyday noises of the city
B) silence
C) the television
D) something in the garden

24 Why did she go into the garden?
A) to see what the weather was like
B) to talk to her neighbours
C) to look for Bailey
D) to make a phone call

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 In the time of Peter the Great, the sea floor was suitable for trade.
A) True
B) False
C) Not Given

26 Monplaisir Palace was worked out by Peter himself.
A) True
B) False
C) Not Given

27 The main aim of Peter the Great was to hide Monplaisir Palace from invaders.
A) True
B) False
C) Not Given

28 Peter the Great broadened Monplaisir Palace according to the model of the Chateau de Versailles.
A) True
B) False
C) Not Given

29 The building of palace at Strelna was completely finished in 1725.
A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

THE CYCLE OF SUCCESS: A CASE STUDY

Within Australia, Australian Hotels Inc (AHI) operates nine hotels and employs over 2000 permanent full-time staff, 300 permanent part-time employees and 100 casual staff. One of its latest ventures, the Sydney Airport hotel (SAH), opened in March 1995. The hotel is the closest to Sydney Airport and is designed to provide the best available accommodation, food and beverage and meeting facilities in Sydney's southern suburbs. Similar to many international hotel chains, however, AHI has experienced difficulties in Australia in providing long-term profits for hotel owners, as a result of the country's high labour-cost structure. In order to develop an economically viable hotel organisation model, AHI decided to implement some new policies and practices at SAH.

The first of the initiatives was an organisational structure with only three levels of management - compared to the traditional seven. Partly as a result of this change, there are 25 per cent fewer management positions, enabling a significant saving. This change also has other implications. Communication, both up and down the organisation, has greatly improved. Decision-making has been forced down in many cases to front-line employees. As a result, guest requests are usually met without reference to a supervisor, improving both customer and employee satisfaction.

The hotel also recognised that it would need a different approach to selecting employees who would fit in with its new policies. In its advertisements, the hotel stated a preference for people with some 'service' experience in order to minimise

traditional work practices being introduced into the hotel. Over 7000 applicants filled in application forms for the 120 jobs initially offered at SAH. The balance of the positions at the hotel (30 management and 40 shift leader positions) were predominantly filled by transfers from other AHI properties.

The most crucial way, however, of improving the labour cost structure at SAH was to find better, more productive ways of providing customer service. SAH management concluded this would first require a process of 'benchmarking'. The prime objective of the benchmarking process was to compare a range of service delivery processes across a range of criteria using teams made up of employees from different departments within the hotel which interacted with each other. This process resulted in performance measures that greatly enhanced SAH's ability to improve productivity and quality.

The front office team discovered through this project that a high proportion of AHI Club member reservations were incomplete. As a result, the service provided to these guests was below the standard promised to them as part of their membership agreement. Reducing the number of incomplete reservations greatly improved guest perceptions of service.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Teams of employees were selected from different hotel departments to participate in a **30** _____ exercise. The information collected was used to compare **31** _____ delivery processes which, in turn, led to the development of **32** _____ that would be used to increase the hotel's capacity to improve **33** _____ as well as quality.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 **The high costs of running AHI's hotels are related to their ...**

A) management.
B) size.
C) staff.
D) policies.

35 **SAH's new organizational structure requires ...**

A) 75% of the old management positions.
B) 25% of the old management positions.
C) 25% more management positions.
D) 5% fewer management positions.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

MOSQUITOES

Mosquitoes like some people more than others. Scientists in the USA found that different body smells attract **Q1**_____. This includes our natural body odour and smells from soaps. Some of these smells could reduce the number of bites we get in the summer. The researchers said mosquitoes preferred soap with a flowery smell. More than 60 per cent of the **Q2**_____ coming from our body come from soap. Changing the soap we use could stop us being attractive to mosquitoes. **Q3**_____ with no smell could make us less tasty to mosquitoes. The **Q4**_____ tested four popular brands of soap on mosquitoes. They also tested the smell of people when they did not wash themselves. The researchers put the soapy and unwashed smells in two different cups in a cage full of mosquitoes. The insects preferred the soapy smells. Mosquitoes are like humans because they like **Q5**_____ and fruity smells. One researcher said coconut-scented soap is best to keep mosquitoes away. Mosquitoes are the world's deadliest creatures. The diseases they carry kill 725,000 **Q6**_____ a year.

PART 2

Questions 7–13

Read the texts 7-13 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are THREE extra statements which you do not need to use. Mark your answers on the answer sheet.

A) This wallet will suit people who prefer natural materials.

B) Items in this suitcase will not be affected if it gets wet.

C) This wallet would suit someone who needs to keep several passports together.

D) This wallet has been specially made to prevent people detecting the numbers on any bank cards, etc. inside it.

E) It is easy to choose one of these suitcases to match most clothing.

F) This will suit people who want to be able to find their document wallet easily in their luggage.

G) Parts of the inside of this wallet have categories printed on them in one colour.

H) This suitcase is for those who wish to purchase expensive luggage.

I) Something to keep this wallet in is provided.

J) Those who want to be reminded of an earlier age of travel will like this suitcase.

7

Lifeventure Mini Travel Document Wallet This is a waterproof wallet, which uses anti-RFID (radio frequency identification) material so your financial details will be safe. It is black with smart sky-blue finishing touches and has a small internal compartment, a smartphone pocket and an external pocket. It can fit two passports.

8

Cath Kidston Breton Stripe A wallet so slim it could easily pass for a small notebook. The inside compartment labels identifying each separate section all have silver lettering on them. The wallet has a special coating which makes it easy to wipe anything like sand off.

9

Ted Baker Voyager's Travel Wallet This wallet comes in smooth black leather, and is no bigger than a passport, but roomy enough for any insurance documents or flight tickets. A small navy-blue pen is supplied inside.

10

Radley Abbey Travel Wallet This plain travel wallet opens up to reveal pockets in various colours labelled 'cards', 'passport' and 'tickets', as well as others left blank for extras. It comes in a handy drawstring bag.

11

Gotravel Organiser The black wallet features seven slip-in card compartments, two small interior zip pockets and a load of other slip-in compartments. It can fit at least four passports.

12

Gotravel Glo Travel Wallet This is a simple, very reasonably priced wallet. It is made of PVC plastic and will suit those who like a wallet that is easy to spot. It comes in a range of bright colours with a white holiday-related design on the front. It has five compartments that can fit a passport with other cards/tickets.

13

Briggs and Riley Weekender A weekend suitcase that's sophisticated and unusually spacious for its type. The strong nylon outer fabric is water and abrasion resistant, so it should handle any knocks without showing signs of damage.

PART 3 Questions 14–21

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once. Mark your answers on the answer sheet.

List of Headings:

I) Failing relationships and negative feelings
II) Winning the lottery may not make you happier
III) What is Hedonic Adaptation?
IV) Philanthropy benefits the giver
V) Wealth management issues
VI) Spend your winnings wisely
VII) What you do, not what you buy
VIII) Behavioral Changes
IX) Case of Lisa Arcand

14. Paragraph A **15. Paragraph B** **16. Paragraph C**
17. Paragraph D **18. Paragraph E** **19. Paragraph F**
20. Paragraph G **21. Paragraph H**

READING

A. This is partially due to a phenomenon called hedonic adaptation or the hedonic treadmill. This describes our tendency to become used to the happiness after experiencing it for the first time. For example, landing the job that you have always wanted may give you happiness but the thrill wears off after a certain period of time. Though it may sound a little bit counterintuitive, hedonic adaptation helps us maintain a steady and emotional equilibrium which makes us less sensitive to any changes including negative events. This phenomenon allows us to revert back to our default emotional state after experiencing high levels of emotion whether good or bad.

B. Piecing together this information, winning the lottery would make you happy but only for a short period of time. After getting used to the luxuries of having enough funds for grandiose homes, better food, and nicer clothes, we go back to how we used to feel before we won the prize. Therefore, winning the lottery doesn't guarantee happiness, in fact, lottery winners even reported being unhappy after they have won the prize.

C. One of the reasons why this is so is because large sums of money can be a lot to manage. Take for example the case of Lisa Arcand from Massachusetts. She won $1 million in 2004 and like all winners, she went on lavish vacations and bought a nice house. However, a million dollars isn't much for taxes; she even opened a restaurant to keep the cash flowing but to no avail, losing everything in 2007. Another example is Michael Caroll who turned from lottery winner to factory worker, even after winning £9.7 million in 2002. Janite Lee, Willie Hurt, and Lou Eisenberg, are just some of the many names that have won the lottery but went from rags to riches and back to rags because of poor financial decisions.

D. Aside from difficulty in managing finances, winning the lottery can be an isolating experience. Unwanted attention and unwanted requests for money from peers can make us paranoid and anxious. Eventually, lottery winners wind up cutting themselves from others because of the fear of being used as a just a source of money than a source of friendship.

E. While the constant fear of losing everything can haunt lottery winners, some even become greedier than they were before winning. A study conducted by social- psychologist Paul Piff at the UC Berkeley Campus in California, proves that gaining wealth can actually change our behaviour drastically. Using a rigged game of Monopoly, Piff chose a player at random to play the game at a certain advantage such as more starting money, and better ability to move around the board. In just after 15 minutes, the advantaged players displayed dramatic change in behaviour including forceful movement of boardgame pieces, speaking louder, and even minute things such as eating more snacks compared to other players.

F. Winning the lottery will make you happy but thanks to hedonic adaptation, the thrill and excitement of spending all that cash won't last long. While most of us would indulge in a fabulous lifestyle after winning, there are ways that winning the lottery can make us happier than having the latest supercar in your garage. It's that old saying it's not what you have, but what you do that counts. The key to happiness, it seems, is to invest in experiences. Think carefully before you start spending.

G. Having a lot of money can open new opportunities for us to enjoy life more than just having expensive things. With hedonic adaptation embedded in our systems, finding what really guarantees happiness can be a hurdle on the way. However, findings show that people tend to adapt faster to extrinsic and material things than we do on experience. Travelling, exploring, and even learning a new skill, gives us more gratification than having the latest clothes from your favourite designer or luxury brand. Therefore, investing in experiences makes us happier than investing in things.

H. Another thing that would help you convert your money into happiness is through charity. Believe it or not, giving others provides more happiness than spending it on yourself. A study by the University of British Columbia and Harvard Business School proved that spending more on others provides more happiness than spending it on yourself. Participants were asked to spend money however they wish, be it on themselves or unto others. Afterwards, a survey was conducted to rate their level of happiness. The group who donated their money to charity feel happier than those who spent it on themselves. While having money does make us happy today, it doesn't guarantee our happiness in the long-run. Thanks to hedonic adaptation, we get used to the emotions that we feel but we can get around it by making every penny count - not on materialistic things - but on experiences and by giving back to the community.

PART 4 Questions 22–29

Read the following text for questions 22-29.

BRITAIN NEEDS STRONG TV INDUSTRY

Comedy writer Armando Iannucci has called for an industry-wide defence of the BBC and British programme-makers. "The Thick of It" creator made his remarks in the annual MacTaggart Lecture at the Edinburgh TV Festival. "It's more important than ever that we have more strong, popular channels... that act as beacons, drawing audiences to the best content," he said. Speaking earlier, Culture Secretary John Whittingdale rejected suggestions that he wanted to dismantle the BBC. 'Champion supporters' Iannucci co- wrote "I'm Alan Partridge", wrote the movie "In the Loop" and created and wrote the hit "HBO" and

"Sky Atlantic show Veep". He delivered the 40th annual MacTaggart Lecture, which has previously been given by Oscar winner Kevin Spacey, former BBC director general Greg Dyke, Jeremy Paxman and Rupert Murdoch. Iannucci said: "Faced with a global audience, British television needs its champion supporters." He continued his praise for British programming by saying the global success of American TV shows had come about because they were emulating British television. "The best US shows are modelling themselves on what used to make British TV so world-beating," he said. "US prime-time schedules are now littered with those quirky formats from the UK - the "Who Do You Think You Are"'s and the variants on "Strictly Come Dancing" - as well as the single-camera non-audience sitcom, which we brought into the mainstream first. We have changed international viewing for the better." With the renewal of the BBC's royal charter approaching, Iannucci also praised the corporation. He said: "If public service broadcasting - one of the best things we've ever done creatively as a country - if it was a car industry, our ministers would be out championing it overseas, trying to win contracts, boasting of the British jobs that would bring." In July, the government issued a green paper setting out issues that will be explored during negotiations over the future of the BBC, including the broadcaster's size, its funding and governance. Primarily Mr Whittingdale wanted to appoint a panel of five people, but finally he invited two more people to advise on the channer renewal, namely former Channel 4 boss Dawn Airey and journalism professor Stewart Purvis, a former editor-in-chief of ITN. Iannucci bemoaned the lack of "creatives" involved in the discussions.

"When the media, communications and information industries make up nearly 8% our GDP, larger than the car and oil and gas industries put together, we need to be heard, as those industries are heard. But when I see the panel of experts who've been asked by the culture secretary to take a root and branch look at the BBC, I don't see anyone who is a part of that cast and crew list. I see executives, media owners, industry gurus, all talented people - but not a single person who's made a classic and enduring television show."

Do the following statements agree with the information given in the text? Choose True, False or Not Given.

22 **Armando Iannucci expressed a need of having more popular channels**

A) True
B) False
C) Not Given

23 **John Whittingdale wanted to dismantle the BBC**

A) True
B) False
C) Not Given

24 **Iannucci delivered the 30th annual MacTaggart Lecture**

A) True
B) False
C) Not Given

25 **Iannucci believes that British television has contributed to the success of American TV shows**

A) True
B) False
C) Not Given

26 **There have been negotiations over the future of the BBC in July**

A) True
B) False
C) Not Given

For questions 27-29, choose the correct answer A, B, C or D. Mark your answers on the answer sheet.

27 **Iannucci praised everything EXCEPT**

A) US shows
B) British shows
C) Corporation
D) British programming

28 **To advise on the charter renewal Mr Whittingdale appointed a panel of**

A) five people
B) two people
C) seven people
D) four people

29 **Who of these people was NOT invited to the discussion concerning BBC renewal?**

A) Armando Iannucci
B) Dawn Airey
C) John Whittingdale
D) Stewart Purvis

PART 5

Questions 30–35

Read the following text for questions 30-35.

PENGUINS' ANTI-ICE TRICK REVEALED

"What we learn here is how penguins combine oil and nano-structures on the feathers to produce this effect to perfection," explains Kavehpour. By analysing feathers from different penguin species, the researchers discovered Antarctic species the gentoo penguin (Pygoscelis papua) was more superhydrophobic compared with a species found in warmer climes — the Magellanic penguin (Spheniscus magellanicus) — whose breeding sites include Argentinian desert.

Gentoo penguins' feathers contained tiny pores which trapped air, making the surface hydrophobic. And they were smothered with a special preening oil, produced by a gland near the base of the tail, with which the birds cover themselves. Together, these properties mean that in the wild, droplets of water on Antarctic penguins' superhydrophobic feathers bead up on the surface like spheres — formations that, according to the team, could provide geometry that delays ice formation, since heat cannot easily flow out of the water if the droplet only has minimal contact with the surface of the feather

"The shape of the droplet on the surface dictates the delay in freezing," explains Kavehpour. The water droplets roll off the penguin's feathers before they have time to freeze, the researchers propose. Penguins living in the Antarctic are highly evolved to cope with harsh conditions: their short outer feathers overlap to make a thick protective layer over fluffier feathers which keep them warm. Under their skin, a thick layer of fat keeps them insulated. The flightless birds spend a lot of time in the sea and are extremely agile and graceful swimmers, appearing much more awkward on land.

Kavehpour was inspired to study Antarctic penguins' feathers after watching the birds in a nature documentary: "I saw these

birds moving in and out of water, splashing everywhere. Yet there is no single drop of frozen ice sticking to them," he tells BBC Earth. His team now hopes its work could aid design of better man-made surfaces which minimise frost formation.

"I would love to see biomimicking of these surfaces for important applications, for example, de-icing of aircrafts," says Kavehpour. Currently, airlines spend a lot of time and money using chemical de-icers on aeroplanes, as ice can alter the vehicles' aerodynamic properties and can even cause them to crash.

Complete the sentences below. Write ONLY ONE WORD from the passage for each answer.

The delay in freezing is dictated by the **30** _____ of the droplet.

Penguins in Antarctic are highly evolved to be able to cope with **31** _____ conditions.

Penguins are insulated by a **32** _____ layer of fat.

On the land, penguins appear much more **33** _____ than in the sea.

The inspiration came to Kavehpour after watching a **34** _____ about penguins.

Kavehpour would like to see **35** _____ surfaces which minimise frost formation.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

AIR CONDITIONING

At a Brooklyn printing plant, fluctuations in heat and moisture were causing the size of the printing paper to keep changing slightly, making it hard to align different colours. Carrier's invention made it possible to control temperature and humidity levels and so **Q1**_____ the colours. The **Q2**_____ also allowed industries such as film, processed food, textiles and pharmaceuticals to improve the quality of their products.

In 1914, the first air-conditioning device was installed in a private house. However, its size, similar to that of an early computer, meant it took up too much space to come into widespread use, and later models, such as the Weathermaker, which Carrier brought out in the 1920s, cost too much for most people. Cooling for human comfort, rather than industrial need, really took off when three air conditioners were **Q3**_____ in the J.L. Hudson Department Store in Detroit, Michigan. People crowded into the shop to experience the new invention. The fashion spread from department stores to cinemas, whose income rose steeply as a result of the **Q4**_____ they provided.

To start with, money-conscious employers regarded air conditioning as a luxury. They considered that if they were paying people to work, they should not be **Q5**_____ for them to be comfortable as well. So in the 1940s and '50s, the industry started putting out a different message about its product: according to their research, installing air conditioning increased productivity amongst employees. They found that typists **Q6**_____ their output by 24% when transferred from a regular office to a cooled one. Another study into office working conditions, which was carried out in the late '50s, showed that the majority of companies cited air conditioning as the single most important contributor to efficiency in offices.

PART 2

Questions 7–14

The people below all want to go to a restaurant for a celebration. Decide which restaurant would be the most suitable for each person.

7

You want to book a special family meal for your grandmother's 80th birthday. There will be a mix of ages so the menu needs to provide for a wide range of tastes. Your grandmother finds it difficult to hear so she doesn't want to take her anywhere which has loud music.

8

You want to book somewhere to celebrate your daughter's 18th birthday. You want to invite about 20 family members and close friends. You are looking for somewhere special that can offer a reasonably priced dinner. You'd like the atmosphere to be friendly and informal.

9

You want to celebrate your first wedding anniversary. You want to go to a first-class restaurant and don't mind how much it costs. You'd like somewhere that attracts famous people and for which your wife can put on her best dress.

10

You want to book a restaurant to celebrate the end of exams with a group of six friends. They don't want to spend much money but want to go somewhere with a lively atmosphere and interesting food.

11

You want to celebrate your son Danny's birthday by taking him to try some top-quality cooking by a well-known chef. Danny is studying restaurant management at college and wants to run his own high- class restaurant one day.

12

You and your friends ate in Spider-Man's Web last week. They would like to try another character restaurant this Thursday. They aren't keen on fish and can't afford anywhere expensive.

13

Your parents want to celebrate their summer wedding anniversary with the family next Tuesday. They hate being with other groups of people. The family normally orders steak, but you would like to try something different.

14

Your family always have lunch out on Sundays and love foreign food. On this occasion they'd prefer to book somewhere they can eat alone as a family, because you leave Sweden for a month on Monday.

A) Max's Café is a favourite venue with the stars for its amazing views across the river and excellent service, so you might find yourself on a table next to a well-known actor or politician. Prices are high but the perfectly-cooked, if slightly old-fashioned, food won't disappoint. Men must wear jackets and ties.

B) One of the cheapest pizza and pasta restaurants in town, JoJo's remains very popular with groups of students for its live music and reasonable prices. The menu hasn't changed in 20 years but when it comes to food, JoJo's customers are more interested in value for money than excitement.

C) Winner of the award for best service, Justin's is now offering a special menu for only £15 per person, giving people the chance to eat unusual food at affordable prices. The restaurant is always very busy and there's limited space for large groups. The staff are young and welcoming, although they are often in a hurry.

D) Relax in comfort at the Regent Hotel's new Terrace Restaurant, while a classical pianist plays softly in the background. Tables are well spaced, so customers can hold their conversations in private. The menu, although certainly not cheap and a little on the dull side, is varied and there's something to please everyone.

E) Sammy's is an excellent choice for those planning an event for a large group. Angela Hastings, former chef at the four-star Pink restaurant, specialises in good-quality simple food which is good value for money. Their aim is to please every type of customer. The staff make you feel very welcome. Live jazz most nights.

F) TV chef, Eliot Harris, has just opened his first restaurant, Bitter Sweet. Harris skilfully offers a mix of exciting and unusual ingredients, which those expecting more traditional food may find strange or even disgusting. A truly memorable experience for real food lovers. Book well in advance and expect to pay top of the range prices.

G) Enjoy amazing sunsets over the city from the 100th floor at the top of the Star Building as world-famous chef, Marco Louis, prepares food for all tastes. We have two private dining rooms for small groups. At Floor 100, expect top food for top prices! Open Monday to Saturday.

H) Discover the world of the ninja warrior in our restaurant which has been designed as a ninja castle. It's conveniently located inside the shopping centre with private rooms for small groups. Not cheap but you can enjoy Japanese fish or meat dishes. Closed all day Tuesday.

I) Don't expect great views here, as this restaurant is a hiding place for spies. You'll need the password to get into our large dining room where you will share long tables with other spies. Reasonable prices for a range of chicken, meat or fish dishes.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A religious or a secular celebration?
B) Halloween on the Gregorian calendar
C) Naughty children and spooky adults
D) Spread by immigrants and accepted by locals
E) The etymology of the name
F) Typically differing views on its origin
G) A global festival thanks to the US
H) Sugary, fruity treats
I) Ghosts, ghouls and pumpkins

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

THE HISTORY OF HALLOWEEN

1. The name Halloween or Hallowe'en dates to the mid 1700s and is of Christian origin. The word "Hallowe'en" means "hallowed evening" or "holy evening". It comes from a Scottish term for All Hallows' Eve (the evening before All Hallows' Day). In Scots, the word "eve" is even, and this is contracted to e'en or een. Over time, the name evolved into Hallowe'en. Although the phrase -All Hallows'" is found in Old English All Hallows' Eve" is itself not seen until 1556.

2. It is widely accepted that many Halloween traditions originated from ancient Celtic harvest festivals, particularly the Gaelic festival Samhain and therefore that the festival may have pagan roots. Some believe, however, that Halloween began solely as a Christian holiday, separate from ancient festivals like Samhain. Historian Nicholas Jones, exploring the origins of Halloween, notes that while "some folklorists have detected its origins in the Roman feast of Pomona, the goddess of fruits and seeds, or in the festival of the dead called Parentalia, it is more typically linked to the Celtic festival of Samhain, which comes from the Old Irish for 'summer's end'.

3. Halloween activities include trick-or-treating, costume parties, carving pumpkins into jack-o'-lanterns, bonfires, apple bobbing, divination games, playing pranks, visiting haunted attractions, telling scary stories, and watching horror films. In many parts of the world, the Christian religious observances of All Hallows' Eve, including attending church services and lighting candles on the graves of the dead, remain popular, although in the UK and USA it is now a more commercial and secular celebration.

4. Trick-or-treating is a traditional celebration for children on Halloween. They go in costume from house to house, asking for treats such as candy or sometimes money, with the question, "Trick or treat?". The word "trick" implies a 'threat" to perform mischief on the homeowners or their property if no treat is given. The practice is said to have roots in the medieval practice of mumming. Mumming, practiced in Germany, Scandinavia and other parts of Europe, involved masked persons in fancy dress who paraded the streets and entered houses to dance or play dice in silence.

5. Anglican and Catholic colonists in America recognized All Hallow's Eve in their church calendars, although the Puritans of

New England maintained strong opposition to the holiday, along with other traditional celebrations of the established Church, including Christmas. It was not until mass Irish and Scottish immigration in the 19th century that Halloween became a major holiday in North America. Confined to the immigrant communities during the mid-19th century, it was gradually assimilated into mainstream society and by the first decade of the 20th century it was being celebrated coast to coast by people of all social, racial and religious backgrounds.

6. On All Hallows' Eve, many Western Christian denominations encourage abstinence from meat giving rise to a variety of vegetarian foods associated with this day. Because in the Northern Hemisphere Halloween comes in the wake of the yearly apple harvest, toffee apple, caramel apples or taffy apples are common Halloween treats made by rolling whole apples in a sticky sugar syrup, sometimes followed by rolling them in nuts.

PART 4

Questions 21–29

Read the following text for questions 21-29.

PRESERVING BRITAIN'S CULTURAL HERITAGE: TO RESTORE A LEGENDARY THEATRICAL DRESS

An astonishingly intricate project is being undertaken to restore a legendary theatrical dress, Angela Wintle explains.

On December 28th, 1888, the curtain rose on a daring new stage revival of Shakespeare's Macbeth at the Lyceum Theatre in London. Topping the bill, playing Lady Macbeth, a main character in the play, was Ellen Terry. She was the greatest and most adored English actress of the age. But she didn't achieve this devotion through her acting ability alone. She knew the power of presentation and carefully cultivated her image. That first night was no exception. When she walked on stage for the famous banqueting scene, her appearance drew a collective gasp from the audience.

She was dressed in the most extraordinary clothes ever to have graced a British stage: a long, emerald and sea-green gown with tapering sleeves, surmounted by a velvet cloak, which glistened and sparkled eerily in the limelight. Yet this was no mere stage trickery. The effect had been achieved using hundreds of wings from beetles. The gown - later named the 'Beetlewing dress' became one of the most iconic and celebrated costumes of the age. Terry was every bit as remarkable as her costumes. At 31, she became a leading lady at the Lyceum Theatre and for two decades, she set about bringing culture to the masses.

The productions she worked on were extravagant and daring. Shakespeare's plays were staged alongside blood-and-thunder melodramas and their texts were ruthlessly cut. Some people were critical, but they missed the point. The innovations sold tickets and brought new audiences to see masterpieces that they would never otherwise have seen.

However, it was a painter who immortalised her. John Singer Sargent had been so struck by Terry's appearance at that first performance that he asked her to model for him, and his famous portrait of 1889, now at the Tate Gallery in London, showed her with a glint in her eye, holding a crown over her flame-red hair. But while the painting remains almost as fresh as the day it was painted, the years have not been so kind to the dress. Its delicate structure, combined with the cumulative effects of time, has meant it is now in an extremely fragile condition. Thus, two years ago, a fundraising project was launched by Britain's National Trust1 to pay for its conservation.

It turned to textile conservator Zenzie Tinker to do the job. Zenzie loves historical dress because of the link with the past. 'Working on costumes like the Beetlewing dress gives you a real sense of the people who wore them; you can see the sweat stains and wear marks. But it's quite unusual to know who actually wore a garment. That's the thing that makes the Beetlewing project so special.'

Before any of Zenzie's conservation work can begin, she and her team will conduct a thorough investigation to help determine what changes have been made to the dress and when. This will involve close examination of the dress for signs of damage and wear, and will be aided by comparing it with John Singer Sargent's painting and contemporary photographs. Then Zenzie and the National Trust will decide how far back to take the reconstruction, as some members feel that even the most recent changes are now part of the history of the dress.

The first stages in the actual restoration will involve delicate surface cleaning, using a small vacuum suction device. Once the level of reconstruction has been determined, the original crocheted2 overdress will be stitched onto a dyed net support before repairs begin. It's going to be extraordinarily difficult, because the original cloth is quite stretchy, so we've deliberately chosen net because that has a certain amount of flexibility in it too,' says Zenzie. When the dress is displayed, none of our work will be noticeable, but we'll retain all the evidence on the reverse so that future experts will be able to see exactly what we've done - and I'll produce a detailed report.'

Zenzie has estimated that the project, costing about £30,000, will require more than 700 hours' work. 'It will be a huge undertaking and I don't think the Trust has ever spent quite as much on a costume before,' she says. 'But this dress is unique. It's very unusual to see this level of workmanship on a theatrical costume, and it must have looked spectacular on stage.' If Terry was alive today, there's no doubt she would be delighted. Unlike many other actresses, she valued her costumes because she kept and reused them time and time again. 'I'd like to think she'd see our contribution as part of the ongoing history of the dress,' says Zenzie.

Choose the correct letter, A, B, C or D.

21 **What do you learn about Ellen Terry in the first paragraph?**

A) Lady Macbeth was her first leading role.
B) The Lyceum was her favourite theatre.
C) She tried hard to look good on stage.
D) She wanted to look young for her audience.

22 **What is the writer's purpose in paragraph 2?**

A) to describe different responses to the Beetlewing dress
B) to explain why the Beetlewing dress had such a big impact
C) to consider the suitability of the Beetlewing dress for the play
D) to compare the look of the Beetlewing dress on and off the stage

23 **According to the writer, the main effect of the Lyceum productions was to**

A) expose more people to Shakespeare's plays.
B) reduce the interest in other types of production.
C) raise the cost of going to the theatre.
D) encourage writers to produce more plays.

24 **In the fourth paragraph, what comparison does the writer make between Sargent's portrait and the Beetlewing dress?**

A) The dress has attracted more attention than the painting.
B) The dress is worth more money than the painting.
C) The painting took longer to produce.
D) The painting looks newer.

25 **Zenzie says the Beetlewing project is particularly special because**

A) the dress is very old.
B) people know who wore the dress.
C) the dress was designed by someone famous.
D) there is evidence that the dress has been used

26 **Which of the following is the most suitable title for the passage?**

A) A lesson from the past
B) A challenging task
C) An unusual fashion show
D) An unexpected discovery

Do the following statements agree with the views of the writer in the reading passage?

27 **The National Trust conducted useful research to assist Zenzie's plans for the dress.**

A) True
B) False
C) Not Given

28 **There will be some discussion over the changes that Zenzie's team should make to the dress.**

A) True
B) False
C) Not Given

29 **Zenzie's estimate for the timing of the project is realistic.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

RADIO AUTOMATION

Today they are everywhere. Production lines controlled by computers and operated by robots. There's no chatter of assembly workers, just the whirr and click of machines. In the mid-1940s, the workerless factory was still the stuff of science fiction. There were no computers to speak of and electronics was primitive. Yet hidden away in the English countryside was a highly automated production line called ECME, which could turn out 1500 radio receivers a day with almost no help from human hands.

John Sargrove, the visionary engineer who developed the technology, was way ahead of his time. For more than a decade, Sargrove had been trying to figure out how to make cheaper radios. Automating the manufacturing process would help. But radios didn't lend themselves to such methods: there were too many parts to fit together and too many wires to solder. Even a simple receiver might have 30 separate components and 80 hand- soldered connections. At every stage, things had to be tested and inspected. Making radios required highly skilled labour—and lots of it.

In 1944, Sargrove came up with the answer. His solution was to dispense with most of the fiddly bits by inventing a primitive chip—a slab of Bakelite with all the receiver's electrical components and connections embedded in it. This was something that could be made by machines, and he designed those too. At the end of the war, Sargrove built an automatic production line, which he called ECME (electronic circuit-making equipment), in a small factory in Effingham, Surrey.

An operator sat at one end of each ECME line, feeding in the plates. She didn't need much skill, only quick hands. From now on, everything was controlled by electronic swires and relays. First stop was the sandblaster, which roughened the surface of the plastic so that molten metal would stick to it. The plates were then cleaned to remove any traces of grit. The machine automatically checked that the surface was rough enough before sending the plate to the spraying section. There, eight nozzles rotated into position and sprayed molten zinc over both sides of the plate. Again, the nozzles only began to spray when a plate was in place. The plate whizzed on. The next stop was the milling machine, which ground away the surface layer of metal to leave the circuit and other components in the grooves and recesses. Now the plate was a composite of metal and plastic. It sped on to be lacquered and have its circuits tested. By the time it emerged from the end of the line, robot hands had fitted it with sockets to attach components such as valves and loudspeakers. When ECME was working flat out; the whole process took 20 seconds.

ECME was astonishingly advanced. Electronic eyes, photocells that generated a small current when a panel arrived, triggered each step in the operation, so avoiding excessive wear and tear on the machinery. The plates were automatically tested at each stage as they moved along the conveyor. And if more than two plates in succession were duds, the machines were automatically adjusted—or if necessary halted. In a conventional factory, workers would test faulty circuits and repair them. But Sargrove's assembly line produced circuits so cheaply they just threw away the faulty ones. Sargrove's circuit board was even more astonishing for the time. It predated the more familiar printed circuit, with wiring printed on a board, yet was more sophisticated. Its built-in components made it more like a modern chip.

When Sargrove unveiled his invention at a meeting of the British Institution of Radio Engineers in February 1947, the assembled engineers were impressed. So was the man from The Times. ECME, he reported the following day, "produces almost without human labour, a complete radio receiving set. This new method of production can be equally well applied to television and other forms of electronic apparatus.

The receivers had many advantages over their predecessors, wit components they were more robust. Robots didn't make the sorts of mistakes human assembly workers sometimes did. "Wiring mistakes just cannot happen," wrote Sargrove. No wires

also meant the radios were lighter and cheaper to ship abroad. And with no soldered wires to come unstuck, the radios were more reliable. Sargrove pointed out that the circuit boards didn't have to be flat. They could be curved, opening up the prospect of building the electronics into the cabinet of Bakelite radios.

Sargrove was all for introducing this type of automation to other products. It could be used to make more complex electronic equipment than radios, he argued. And even if only part of a manufacturing process were automated, the savings would be substantial. But while his invention was brilliant, his timing was bad. ECME was too advanced for its own good. It was only competitive on huge production runs because each new job meant retooling the machines. But disruption was frequent. Sophisticated as it was, ECME still depended on old- fashioned electromechanical relays and valves—which failed with monotonous regularity. The state of Britain's economy added to Sargrove's troubles. Production was dogged by power cuts and post-war shortages of materials. Sargrove's financial backers began to get cold feet.

There was another problem Sargrove hadn't foreseen. One of ECME's biggest advantages— the savings on the cost of labour—also accelerated its downfall. Sargrove's factory had two ECME production lines to produce the two circuits circuits needed for each radio. Between them these did what a thousand assembly workers would otherwise have done. Human hands were needed only to feed the raw material in at one end and plug the valves into their sockets and fit the loudspeakers at the other. After that, the only job left was to fit the pair of Bakelite panels into a radio cabinet and check that it worked.

Sargrove saw automation as the way to solve post-war labour shortages. With somewhat Utopian idealism, he imagined his new technology would free people from boring, repetitive jobs on the production line and allow them to do more interesting work. "Don't get the idea that we are out to rob people of their jobs," he told the Daily Mirror. "Our task is to liberate men and women from being slaves of machines."

The workers saw things differently. They viewed automation in the same light as the everlasting light bulb or the suit that never wears out—as a threat to people's livelihoods. If automation spread, they wouldn't be released to do more exciting jobs. They'd be released to join the dole queue. Financial backing for ECME fizzled out. The money dried up. And Britain lost its lead in a technology that would transform industry just a few years later.

Complete the following summary of the paragraphs of Reading Passage, using NO more than two words from the Reading Passage for each answer.

Sargrove had been dedicated to create a **30** _____ radio by automation of manufacture.

The old version of radio had a large number of independent **31** _____

After this innovation made, wireless-style radios became **32** _____ and inexpensive to export oversea.

As the Sargrove saw it, the real benefit of ECME's radio was that it reduced **33** _____ of manual work; which can be easily copied to other industries of manufacturing electronic devices.

Choose the correct letter A, B, C or D.

34 What were workers' attitude towards ECME Model initially

A) anxious
B) welcoming
C) boring
D) inspiring

35 What is the main idea of this passage?

A) approach to reduce the price of radio
B) a new generation of fully popular products and successful business
C) in application of die automation in the early stage
D) ECME technology can be applied in many product fields

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

CANNABIS AND CANCER

For thousands of years people have used cannabis for recreational, ritualistic and medicinal purposes. In the modern era, the latter property excites a lot of people, and there is no shortage of wild claims about the supposed medical benefits of the plant. Of all the **Q1**_____, perhaps the most bold is the assertion that cannabis can cure cancer. Astounding testimonials about cannabis and its derived products shrinking tumours or curing terminal cases are easy to find on the internet. But alluring as these stories are, they tend to be based on misunderstanding, wishful thinking or outright falsehood. Let's start by asking what the **Q2**_____ efficacy might be. Contrary to what most people believe, medical uses of cannabis have been widely studied. A 2017 review by the National Academy of Science looked at over 10,000 studies. They found evidence for some applications of cannabis, including managing chronic pain and spasms associated with multiple sclerosis. There was also good **Q3**_____ that tetrahydrocannabinol (THC), the main psychoactive ingredient in cannabis, can reduce the nausea caused by chemotherapy. Indeed, a synthetic form of THC, called dronabinol, has been prescribed for just this use for decades. But, crucially, there is zero evidence that cannabis has any curative or even helpful impact on **Q4**_____ despite enthusiastic claims to the contrary. Why then is there such a gulf between public perception and scientific evidence? Part of this is **Q5**_____ For example, an often aired claim is that high-dose THC kills cancer cells in a petri dish. This is true, but not very meaningful. Killing cells in a dish is extremely easy; you can do so with anything from heat to bleach. But effective anti-cancer agents must be able to selectively kill cancer **Q6**_____ in the human body while sparing healthy ones. The reality is that cannabis simply cannot do this.

PART 2

Questions 7–14

The people below all want to do a local activity. There are eight activities in the local area. Decide which activity would be the most suitable for the people below.

7

You have a teenage son who is very keen to get into acting and learning how best to perform on stage. Because of other activities he cannot do Saturdays or Sundays.

8

You are 21 and on summer vacation before going back to university. You are looking for voluntary work that will help you gain experience in working with customers.

9

You would like to take your children to the park one day next week. You would like to show them the importance of doing something for local people.

10

You are a new mum with a three-month-old baby and are looking for exercise to help relax. You are free on Monday and Tuesday and love getting a bargain!

11

You are looking for somewhere to take your son for something to eat at lunchtime any day this week. He would like to go somewhere that is outside to get some fresh air.

12

You have decided to join a gym. You want to have someone who can help and encourage you to work hard. You'd also like to go swimming at the weekend.

13

You are looking for a personal trainer and are returning to exercise after hurting your ankle. You are busy at work and need someone who is available any day.

14

You are a keen athlete and want to find somewhere you can train on a race-track and compete against other athletes. You like to train early in the morning.

A) Friends of Hamley Park Come along to 'Friends of Hamley Park' for our monthly litter pick. Join our friendly team of adults and children every Sunday to help us keep our lovely local park tidy and something to be proud of. We provide all the tools and equipment you'll need. Just come along on the day and we'll find something for you to do.

B) Yoga sessions Yoga sessions with Petra aimed at your level. I know how important it can be for you mums to get out of the house and do some exercise. My fun weekly 'Mum and Child' yoga classes start on Monday 18 June. Buy five sessions and get one free

C) Broadchester Park You are invited to come along for our weekly picnic in Broadchester Park. Open to all,young and old, it's held every Tuesday throughout the summer at 12.00. Please note there will be a charge for food which will be supplied by the café.

D) JDC Gym We offer personal, one-to-one training programmes for beginner and more advanced workouts. Our trainers are available seven days a week and can meet you at the gym or at a place that's more convenient to you. Build your strength and fitness and get help with any injuries you may have.

E) Storytelling Storytelling has become popular lately, especially for those who want to tell their story on stage in front of a live audience. Join our one-day event on Wednesday – we'll be looking at how to feel confident and keep your audience interested.

F) Time to relax A new six-week yoga course for beginners. Help yourself become more focused, reduce your stress levels, sleep better and improve your mental health. I will be running these courses in the local community centre on Wednesday and Thursday mornings from 11.00 till 12.00. Childcare is available for babies and young children.

G) The community café Our community café is looking for young volunteer waiters and waitresses to help us throughout the summer period. You'll learn skills that will be useful when you start your job search. We're looking for anyone who is at least 18 and would like you to be available for at least two days per week.

H) Sport Special For those who want to focus on their own personal fitness, Sport Special provides members with a modern gym with the latest equipment. The leisure centre also organises group events such as five-a-side football or hockey. After the match, get to know your team mates in the café for tea, coffee and snacks.

I) Stevie's Gym Stevie's Gym is well known in the area for offering the best in everything to do with health and fitness. Relax in our luxury swimming pool or use the latest equipment in the gym. It's easyto lose interest if you don't have the right support, and our skilled team of trainers will get you started and help you stay focused.

J) Central Fitness and Leisure We are one of the larger leisure centres in the area and can offer a huge range of activities at our 24-hour gym and 400-metre running track that is free to use for members. Sign up to our monthly league table and see how your times compare to other members.

K) The Arcadian Harriers We meet in the Arcadian Leisure Centre twice a week and set off on planned routes around the area. Join us on Tuesday for the 6k run and Thursday for the 10k. You don't have to become a member to run with us, but we'd love it if you did. We are also looking for people to help out with events.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) Common objections
B) Who's planning what
C) This type sells best in the shops
D) The figures say it all
E) Early trials
F) They can't get in without these
G) How does it work?
H) Fighting fraud
I) Systems to avoid
J) Accepting the inevitable

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

THE KEYLESS SOCIETY

1. Students who want to enter the University of Montreal's Athletic Complex need more than just a conventional ID card - their identities must be authenticated by an electronic hand scanner. In some California housing estates, a key alone is insufficient to get someone in the door; his or her voice print must also be verified. And soon, customers at some Japanese banks will have to present their faces for scanning before they can enter the building and withdraw their money.

2. All of these are applications of biometrics, a little-known but fast- growing technology that involves the use of physical or biological characteristics to identify individuals. In use for more than a decade at some high- security government institutions in the United States and Canada, biometrics are now rapidly popping up in the everyday world. Already, more than 10,000 facilities, from prisons to day-care centres, monitor people's fingerprints or other physical parts to ensure that they are who they claim to be. Some 60 biometric companies around the world pulled in at least $22 million last year and that grand total is expected to mushroom to at least $50 million by 1999.

3. Biometric security systems operate by storing a digitised record of some unique human feature. When an authorised user wishes to enter or use the facility, the system scans the person's corresponding characteristics and attempts to match them against those on record. Systems using fingerprints, hands, voices, irises, retinas and faces are already on the market. Others using typing patterns and even body odours are in various stages of develo pme nt.

4. Fingerprint scanners are currently the most widely deployed type of biometric application, thanks to their growing use over the last 20 years by law-enforcement agencies. Sixteen American states now use biometric fingerprint verification systems to check that people claiming welfare payments are genuine. In June, politicians in Toronto voted to do the same, with a pilot project beginning next year.

5. To date, the most widely used commercial biometric system is the handkey, a type of hand scanner which reads the unique shape, size and irregularities of people's hands. Originally developed for nuclear powerplants, the handkey received its big

break when it was used to control access to the Olympic Village in Atlanta by more than 65,000 athletes, trainers and support staff Now there are scores of other applications.

6. Around the world, the market is growing rapidly. Malaysia, for example, is preparing to equip all of its airports with biometric face scanners to match passengers with luggage. And Japan's largest maker of cash dispensers is developing new machines that incorporate iris scanners. The first commercial biometric, a hand reader used by an American firm to monitor employee attendance, was introduced in 1974. But only in the past few years has the technology improved enough for the prices to drop sufficiently to make them commercially viable. 'When we started four years ago, I had to explain to everyone what a biometric is,' says one marketing expert. Now, there's much more awareness out there.'

PART 4 Questions 21–29

Read the following text for questions 21-29.

THE CREATION OF LASTING MEMORIES

Many studies of the brain processes underlying the creation of memory consolidation (lasting memories) have involved giving various human and animal subjects treatment, while training them to perform a task. These have contributed greatly to our understanding.

In pioneering studies using goldfish, Bernard Agranoff found that protein synthesis inhibitors injected after training caused the goldfish to forget what they had learned. In other experiments, he administered protein synthesis inhibitors immediately before the fish were trained. The remarkable finding was that the fish learned the task completely normally, but forgot it within a few hours - that is, the protein synthesis inhibitors blocked memory consolidation, but did not influence short-term memory.

There is now extensive evidence that short-term memory is spared by many kinds of treatments, including electro-convulsive therapy (ECT), that block memory consolidation. On the other hand, and equally importantly, neuroscientist Ivan Izquierdo found that many drug treatments can block short-term memory without blocking memory consolidation.

Contrary to the hypothesis put forward by Canadian psychologist Donald Hebb, in 1949, long-term memory does not require short-term memory, and vice versa. Such findings suggest that our experiences create parallel, and possibly independent stages of memory, .each with a different life span. All of this evidence from clinical and experimental studies strongly indicates that the brain handles recent and remote memory in different ways; but why does it do that?

We obviously need to have memory that is created rapidly: reacting to an ever and rapidly changing environment requires that. For example, most current building codes require that the heights of all steps in a staircase be equal. After taking a couple of steps, up or down, we implicitly remember the heights of the steps and assume that the others will be the same. If they are not the same, we are very likely to trip and fall. Lack of this kind of rapidly created implicit memory would be bad for us and for insurance companies, but perhaps good for lawyers. It would be of little value to us if we remembered the heights of the steps only after a delay of many hours, when the memory becomes consolidated. The hypothesis that lasting memory consolidates slowly over time is supported primarily by clinical and experimental evidence that the formation of long-term memory is influenced by treatments and disorders affecting brain functioning. There are also other kinds of evidence indicating more directly that the memories consolidate over time after learning. Avi Kami and Dov Sagi reported that the performance of human subjects trained in a visual skill did not improve until eight hours after the training was completed, and that improvement was even greater the following day. Furthermore, the skill was retained for several years.

Studies using human brain imaging to study changes in neural activity induced by learning have also reported that the changes continue to develop for hours after learning. In an innovative study using functional imaging of the brain, Reza Shadmehr and Henry Holcomb examined brain activity in several brain regions shortly after human subjects were trained in a motor learning task requiring arm and hand movements. They found that while the performance of the subjects remained stable for several hours after completion of the training, their brain activity did not; different regions of the brain were predominantly active at different times over a period of several hours after the training. The activity shifted from the prefrontal cortex to two areas known to be involved in controlling movements, the motor cortex and cerebellar cortex. Consolidation of the motor skill appeared to involve activation of different neural systems that increased the stability of the brain processes underlying the skill.

There is also evidence that learning-induced changes in the activity of neurons in the cerebral cortex continue to increase for many days after the training. In an extensive series of studies using rats with electrodes implanted in the auditory cortex, Norman Weinberger reported that, after a tone of specific frequency was paired a few times with footshock, neurons in the rats' auditory cortex responded more to that specific tone and less to other tones of other frequencies. Even more interestingly, the selectivity of the neurons' response to the specific tone used in training continued to increase for several days after the training was terminated.

It is not intuitively obvious why our lasting memories consolidate slowly. Certainly, one can wonder why we have a form of memory that we have to rely on for many hours, days or a lifetime, that is so susceptible to disruption shortly after it is initiated. Perhaps the brain system that consolidates long-term memory over time was a late development in vertebrate evolution. Moreover, maybe we consolidate memories slowly because our mammalian brains are large and enormously complex. We can readily reject these ideas. All species of animals studied to date have both short and long-term memory; and all are susceptible to retrograde amnesia. Like humans, birds, bees, and molluscs, as well as fish and rats, make long-term memory slowly. Consolidation of memory clearly emerged early in evolution, and was conserved. Although there seems to be no compelling reason to conclude that a biological system such as a brain could not quickly make a lasting memory, the fact is that animal brains do not. Thus, memory consolidation must serve some very important adaptive function or functions. There is considerable evidence suggesting that the slow consolidation is adaptive because it enables neurobiological processes occurring shortly after learning to influence the strength of memory for experiences. The extensive evidence that memory can be enhanced, as well as impaired, by treatments administered

shortly after training, provides intriguing support for this hypothesis.

Choose the correct letter, A, B, C or D.

21 **Experiments by Bernard Agranoff described in Reading Passage involved**

A) injecting goldfish at different stages of the experiments.
B) training goldfish to do different types of task.
C) using different types of treatment on goldfish.
D) comparing the performance of different goldfish on certain tasks.

22 **Most findings from recent studies suggest that**

A) drug treatments do not normally affect short-term memories.
B) long-term memories build upon short-term memories.
C) short and long-term memories are formed by separate processes.
D) ECT treatment affects both short-and long-term memories.

23 **In the fifth paragraph, what does the writer want to show by the example of staircases?**

A) Prompt memory formation underlies the performance of everyday tasks.
B) Routine tasks can be carried out unconsciously.
C) Physical accidents can impair the function of memory.
D) Complex information such as regulations cannot be retained by the memory.

24 **Observations about memory by Kami and Sagi**

A) cast doubt on existing hypotheses.
B) related only to short-term memory.
C) were based on tasks involving hearing.
D) confirmed other experimental findings.

25 **What did the experiment by Shadmehr and Holcomb show?**

A) Different areas of the brain were activated by different tasks.
B) Activity in the brain gradually moved from one area to other areas.
C) Subjects continued to get better at a task after training had finished.
D) Treatment given to subjects improved their performance on a task.

Do the following statements agree with the views of the writer in Reading Passage?

26 **The training which Kami and Sagi's subjects were given was repeated over several days.**

A) True
B) False
C) Not Given

27 **The rats in Weinberger's studies learned to associate a certain sound with a specific experience.**

A) True
B) False
C) Not Given

28 **The results of Weinberger's studies indicated that the strength of the rats' learned associations increases with time.**

A) True
B) False
C) Not Given

29 **It is easy to see the evolutionary advantage of the way lasting memories in humans are created.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

TALC POWDER

High in the French Pyrenees, some 1,700m above see level, lies Trimouns, a huge deposit of hydrated magnesium silicate - talc to you and me. Talc from Trimouns, and from ten other Luzenac mines across the globe, is used in the manufacture of a vast array of everyday products extending from paper, paint and plaster to cosmetics, plastics and car tyres. And of course there is always talc's best known end use: talcum powder for babies' bottoms. But the true versatility of this remarkable mineral is nowhere better displayed than in its sometimes surprising use in certain niche markets in the food and agriculture industries.

Take, for example, the chewing gum business. Every year, Talc de Luzenac France—which owns and operates the Trimouns mine and is a member of the international Luzenac Group (art of Rio Tinto minerals)—supplies about 6,000 tones of talc to chewing gum manufacturers in Europe. "We've been selling to this sector of the market since the 1960s,"says Laurent Fournier, sales manager in Luzenac's Specialties business unit in Toulouse. "Admittedly, in terms of our total annual sales of talc, the amount we supply to chewing gum manufacturers is relatively small, but we see it as a valuable niche market: one where customers place a premium on securing supplies from a reliable, high quality source. Because of this, long term allegiance to a proven suppler is very much a feature of this sector of the talc market."Switching sources—in the way that you might choose to buy, say, paperclips from Supplier A rather than from Supplier B —is not a easy option for chewing gum manufacturers,"Fournier says. "The cost of reformulating is high, so when customers are using a talc grade that works, even if it's expensive, they are understandably reluctant to switch."

But how is talc actually used in the manufacture of chewing gum? PatrickDelord, an engineer with a degree in agronomics, who has been with Luzenac for 22 years and is now senior market development manager, Agriculture and Food, in Europe, explains that chewing gums has four main components. "The most important of them is the gum base, "he says. "It's the gum base that puts the chew into chewing gum. It binds all the ingredients together, creating a soft, smooth texture. To this the manufacturer then adds sweeteners, softeners and flavourings. Our talc is used as a filler in the gum base. The amount varies between, say, ten and 35 per cent, depending on the type of gum. Fruit flavoured chewing gum, for example, is slightly acidic and would react with the calcium carbonate that the manufacturer might otherwise use as a filler. Talc, on the other hand, makes an ideal filler because it's non-reactive chemically.

In the factory, talc is also used to dust the gum base pellets and to stop the chewing gum sticking during the lamination and packing process, "Delord adds.

The chewing gum business is, however, just one example of talc's use in the food sector. For the past 20 years or so, olive oil processors in Spain have been taking advantage of talc's unique characteristics to help them boost the amount of oil they extract from crushed olives. According to Patrick Delord, talc is especially useful for treating what he calls "difficult" olives. After the olives are harvested-preferably early in the morning because their taste is better if they are gathered in the cool of the day - they are taken to the processing plant. There they are crushed and then stirred for 30-45 minutes. In the old days, the resulting paste was passed through an olive press but nowadays it's more common to add water and centrifuge the mixture to separate the water and oil from the solid matter. The oil and water are then allowed to settle so that the olive oil layer can be decanted oft and bottled. "Difficult" olives are those that are more reluctant than the norm to yield up their full oil content. This may be attributable to the particular species of olive, or to its water content and the time of year the olives are collected—at the beginning and the end of the season their water content is often either too high or too low. These olives are easy to recognize because they produce a lot of extra foam during the stirring process, a consequence of an excess of a fine solid that acts as anatural emulsifier. The oil in this emulsion is lost when the water is disposed of. Not only that, if the waste water is disposed of directly into local fields—often the case in many smaller processing operations—the emulsified oil may take some time to biodegrade and so be harmful to the environment. "If you add between a it absorbs the half and two percent of talc by weightduring the stirring process, it absorbs the natural emulsifier in the olives and so boosts the amount of oil you can extract,"says Delord. "In addition, talc's flat, platey' structure helps increase the size of the oil droplets liberated during stirring, which again improves the yield. However, because talc is chemically inert, it doesn't affect the colour, taste, appearance or composition of the resulting olive oil."

If the use of talc in olive oil processing and in chewing gum is long established, new applications in the food and agriculture industries are also constantly being sought by Luzenac. One such promising new market is fruit crop protection, being pioneered in the US. Just like people, fruit can get sunburned. In fact, in very sunny regions up to 45 percent of atypical crop can be affected by heat stress and sunburn. However, in the case of fruit, it's not so much the ultra violet rays which harm the crop as the high surface temperature that the sun's rays create.

To combat this, farmers normally use either chemicals or spray a continuous fine canopy of mist above the fruit trees or bushes. The trouble is, this uses a lot of water—normally a precious commodity in hot, sunny areas—and it is therefore expensive. What's more, the ground can quickly become waterlogged." So our idea was to coat the fruit with talc to protect it from the sun,"says Greg Hunter, a marketing specialist who has been with Luzenac for ten years. "But to do this, several technical challenges had first to be overcome. Talc is very hydrophobic: it doesn't like water. So in order to have a viable product we needed a wettable powder—something that would go readily into suspension so that it could be sprayed onto the fruit. It also had to break the surface tension of the cutin (the natural waxy, waterproof layer on the fruit) and of course it had to wash off easily when the fruit was harvested. No-one's going to want an apple that's covered in talc." Initial trials in the state of Washington in 2003 showed that when the product was sprayed onto Granny Smith apples, it reduced their surface temperature and lowered the incidence of sunburn by up to 60 per cent. Today the new product, known as Invelop Maximum SPF, is in its second commercial year on the US market. Apple growers are the primary target although Hunter believes grape growers represent another sector with long term potential. He isalso hopeful of extending sales to overseas markets such as Australia, South America and southern Europe.

Complete the following summary below using NO MORE THAN TWO WORDS from the Reading Passage for each answer.

The use of talc powder in the olive oil industry in Spain has been around for **30** _____ years. It is extremely useful in dealing with "difficult" olives which often produce a lot of **31** _____ due to the high content of solid matter.

The traditional method of oil extraction used in some smaller plants often produces **32** _____ which contains emulsified oil, and if it is directly disposed of, it may be **33** _____ to the environment.

Choose the correct letter, A, B, C or D.

34 What is one key reason why chewing gum manufacturers prefer talc as a filler in gum base?

A) Talc enhances the flavor of the chewing gum.
B) Talc is chemically non-reactive, making it ideal for use in acidic gums.
C) Talc makes the gum base more elastic and chewy.
D) Talc is a more cost-effective option compared to other fillers.

35 How does talc help in the olive oil extraction process, especially with "difficult" olives?

A) It adds flavor to the olive oil and improves its aroma.
B) It absorbs the natural emulsifiers in the olives, boosting the oil yield.
C) It helps separate the oil from the water without the need for centrifugation.
D) It increases the water content in olives, making the extraction process easier.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

COLOUR ME HEALTHY

Different Colours can affect us in many different ways; that's according to Verity Allen. In her new series 'Colour me Healthy', Verity looks at the ways that **Q1**_____ can influence how hard we work and the choices we make. They can even change our emotions and even influence how healthy we are. 'Have you ever noticed how people always use the same colours for the same things?' says Verity. 'Our toothpaste is always white or blue or maybe red. It's never green. Why not? For some reason we think that blue and white is clean, while we think of green products as being a bit disgusting. We respect a company which writes its name in blue or black, but we don't respect one that uses pink or orange. **Q2**_____ who design new **Q3** _____ can use these ideas to influence what we buy.' During this four-part **Q4**_____ Verity studies eight different colours, two colours in each programme. She meets people who work in all aspects of the colour industry, from people who **Q5**_____ food packets, to people who name the colours of lipsticks. Some of the people she meets clearly have very little scientific knowledge to support their **Q6** _____, such as the American 'Colour Doctor' who believes that serious diseases can be cured by the use of coloured lights. However, she also interviews real scientists who are studying the effects of green and red lights on mice, with some surprising results. Overall, it's an interesting show, and anyone who watches it will probably find out something new. But because Verity goes out of her way to be polite to everyone she meets on the series, it's up to the viewers to make their own decisions about how much they should believe.

PART 2

Questions 7–14

There are descriptions of eleven holidays. Decide which holiday (letters A to K) would be the most suitable for the people described below.

7

You are a very busy investment banker who wants a week off work. You like scenery and fresh air. You are very fit and you enjoy walking. For this holiday you want to leave the beach and try something different.

8

You are a student. You will go to university next year, and your parents want to give you a holiday as a present before you go. You like reading and dancing, and want somewhere romantic and relaxing

9

You want to give your husband a holiday to celebrate his 60th birthday. You like all sorts of sport, but because your heart is rather weak, you cannot do anything too energetic. You would like to stay in a good hotel.

10

You own your own business. You have had a successful year, and you want a holiday. You want somewhere with very good food and accommodation, and you want to enjoy yourself without doing very much.

11

The Hamble family are looking for something that will interest Mark aged 7 and Tammy, aged 13. They all like animals and sport. Mr and Mrs Hamble would also like something that lets them do some exploring on their own.

12

Sammie wants to visit a market after spending the day in the city. He would like to photograph a historic place, and buy a painting by someone unknown.

13

Alexia is looking for a really special necklace for her grandmother's birthday. She'd like to spend the whole day at the market, and wants to avoid the cold by staying inside.

14

Ella is looking for objects from other countries for her friends. She'd like to choose a second-hand book to read on the journey home, and wants a snack at the market, too.

A) Golf in America: A golfing safari across the United States in just ten days. Try eight great courses from New England to California, with golf lessons as you go. Transport is provided between your 5 star hotels and golf courses.

B) Climbing in Switzerland: Whether you are experienced or just beginning, Hipeak have the mountaineering holiday for you. Choose one of our seven, ten or fourteen day packages, and you can enjoy wonderful alpine scenery while climbing at your particular level of ability. No mountaineering gear is needed - we supply it all.

C) Florida and Disney world: Every kid dreams of Disney World, and after mom and dad have seen it all, you can leave the children with one of our special guides, and try some scuba diving in the Florida Keys, and a shopping tour of Miami. Or you can see Florida for yourselves with our no-problem car-hire scheme.

D) Safari in Kenya: Try seven days in Wariwaro lodge in Kenya's Serengetti park. Coach tours through the savannah to see some of the world's most spectacular wildlife. Flights go every Sunday from Heathrow, London, and there is our special family option, with children getting a one-third discount.

E) Holiday in Majorca: Two wild weeks in Majorca. Yes, if you are aged between 18 and 31, this package holiday is for you. Thr fun starts at Manchester airport, and in Majorca the party moves from the beach to the disco to the swimming pool. It only stops when you can't party any more. If you want a challenge, try this!

F) Mediterranean cruise: The ancient Mediterranean in 16 days. Take a luxury cruise on the RMV Perikles to Herculaneum, Caesarea, Athens and Alexandria. Enjoy our on-board facilities, including restaurant, library, cinema and disco.

G) Carribean Beach: You've been working too hard! Forget it all on a tropical beach. Ten days in a luxury hotel, right on the beach. You hardly have to move from your deckchair, except to enjoy our award-winning cookery. Beach cricket and barbeques are on offer for the more energetic.

H) Hiking in Katmandu: Try a Katmandu adventure. See the Himalayas for yourself in this two week hiking tour. You must be fit and an experienced hiker, as well as having your own boots. We supply tents, the guides and the holiday of a lifetime!

I) Rosewell Hill: Our market's in an amazing building that's hundreds of years old. Visitors find our late-night opening hours convenient, and there are always performers entertaining the crowds. We've recently opened more stalls specializing in pictures both from wellknown artists and also those beginning their careers.

J) Camberwall Market: There's lots to see in this interesting indoor market, so it's open from morning until late, in a fantastic modern setting. Find everything from rare gold and silver jewellery to designer clothes - although the prices aren't cheap, the quality's excellent. After shopping, enjoy a meal in a nearby restaurant.

K) Frome Place: Stalls open during normal daytime shopping hours so, depending on the weather, there's plenty to entertain you the whole day. Try our sandwich bar if you're hungry, and look for an old copy of something by a favourite author. We also have gifts from all over the world.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A) British chemists' achievement (example)
B) The creation of six-membered rings
C) Products produced by Diels-Alder reactions
D) The large receptor molecule designed by British chemists
E) The drawback of the receptor
F) The Diels-Alder reaction
G) Fast reactions due to the receptor
H) Further efforts to be made on the receptor

15. Paragraph I **16. Paragraph II** **17. Paragraph III**
18. Paragraph IV **19. Paragraph V** **20. Paragraph VI**

DIELS-ALDER RECEPTOR MOLECULE

I. Jeremy Sanders and his colleagues at the University of Cambridge have designed and synthesized a large cyclic "receptor" molecule, which makes one such reaction proceed almost 60,000 times as fast as usual. The receptor is similar to another built last year by the same team (New Scientist, Science, 1 February 1992). It consists of a ring of three porphyrin molecules linked by bridging chemical groups. Each porphyrin molecule contains a zincion at its centre. The central cavity of the new receptor is slightly smaller than before, and the researchers have also anchored pyridine groups to two of the zincions to act as bonding sites.

II. Sanders and his colleagues have used their receptor to speed up and control the products of the so-called Diels-Alder reaction, a mainstay of chemical synthesis. The reaction occurs between two molecules - a "diene", which has two carbon-carbon bonds separated by a single bond, and a diene-seeking molecule, or "dienophile". In the right conditions, these two molecules transfer the electrons involved in their double bonds from atom to atom to form new bonds that complete a ring of six carbon atoms with a single double bond. The creation of such six-membered rings is the crucial first step in making many pharmaceuticals and agrochemical.

III. Some Diels-Alder reactions are too slow to be useful industrially. The researchers, therefore, designed their receptor so that it would hold the diene and dienophile, via the pyridine (Py) groups, in the right positions to react quickly. According to Sanders, the receptor acts like a "molecular reaction vessel in which the effective concentration of reactants can be increased dramatically, so allowing a fast reaction".

IV. Normally, Diels-Alder reactions produce a mixture of two products. But because in the receptor the reactants are forced into a specific orientation relative to each other, only one of the two possible products can form.

V. Sanders hopes to modify the receptor to bring together in the cavity two molecules that do not normally react. This could lead to be the synthesis of compounds which everyday synthetic chemistry cannot make.

VI. The receptor differs from an enzyme or other catalyst in one important respect. Only a tiny amount of an enzyme is needed

to make a reaction thousands of times faster, but large quantities of the receptor are needed to make a significant difference to the speed of a reaction. However, Sanders is confident that in the future his team will be able to increase the turnover or able to increase the turnover of reactants by designing new features into the receptor. This would reduce the amount of receptor needed to speed up a reaction by a given amount. The researchers report further details of their results in the latest issue of Journal of the Chemical Society, Chemical Communications.

PART 4

Questions 21–29

Read the following text for questions 21-29.

HOW BACTERIA INVENTED GENE EDITING

This week the UK Human Fertilisation and Embryology Authority okayed a proposal to modify human embryos through gene editing. The research, which will be carried out at the Francis Crick Institute in London, should improve our understanding of human development. It will also undoubtedly attract controversy - particularly with claims that manipulating embryonic genomes is a first step towards designer babies. Those concerns shouldn't be ignored. After all, gene editing of the kind that will soon be undertaken at the Francis Crick Institute doesn't occur naturally in humans or other animals.

It is, however, a lot more common in nature than you might think, and it's been going on for a surprisingly long time - revelations that have challenged what biologists thought they knew about the way evolution works. We're talking here about one particular gene editing technique called CRISPR-Cas, or just CRISPR. It's relatively fast, cheap and easy to edit genes with CRISPR - factors that explain why the technique has exploded in popularity in the last few years. But CRISPR wasn't dreamed up from scratch in a laboratory. This gene editing tool actually evolved in single-celled microbes.

CRISPR went unnoticed by biologists for decades. It was only at the tail end of the 1980s that researchers studying Escherichia coli noticed that there were some odd repetitive sequences at the end of one of the bacterial genes. Later, these sequences would be named Clustered Regularly Interspaced Short Palindromic Repeats - CRISPRs. For several years the significance of these CRISPRs was a mystery, even when researchers noticed that they were always separated from one another by equally odd 'spacer' gene sequences.

Then, a little over a decade ago, scientists made an important discovery. Those 'spacer' sequences look odd because they aren't bacterial in origin. Many are actually snippets of DNA from viruses that are known to attack bacteria. In 2005, three research groups independently reached the same conclusion: CRISPR and its associated genetic sequences were acting as a bacterial immune system. In simple terms, this is how it works. A bacterial cell generates special proteins from genes associated with the CRISPR repeats (these are called CRISPR associated - Cas - proteins). If a virus invades the cell, these Cas proteins bind to the viral DNA and help cut out a chunk. Then, that chunk of viral DNA gets carried back to the bacterial cell's genome where it is inserted - becoming a spacer. From now on, the bacterial cell can use the spacer to recognise that particular virus and attack it more effectively.

These findings were a revelation. Geneticists quickly realised that the CRISPR system effectively involves microbes deliberately editing their own genomes - suggesting the system could form the basis of a brand new type of genetic engineering technology. They worked out the mechanics of the CRISPR system and got it working in their lab experiments. It was a breakthrough that paved the way for this week's announcement by the HFEA. Exactly who took the key steps to turn CRISPR into a useful genetic tool is, however, the subject of a huge controversy. Perhaps that's inevitable - credit for developing CRISPR gene editing will probably guarantee both scientific fame and financial wealth.

Beyond these very important practical applications, though, there's another CRISPR story. It's the account of how the discovery of CRISPR has influenced evolutionary biology. Sometimes overlooked is the fact that it wasn't just geneticists who were excited by CRISPR's discovery - so too were biologists. They realised CRISPR was evidence of a completely unexpected parallel between the way humans and bacteria fight infections. We've known for a long time that part of our immune system "learns" about the pathogens it has seen before so it can adapt and fight infections better in future. Vertebrate animals were thought to be the only organisms with such a sophisticated adaptive immune system. In light of the discovery of CRISPR, it seemed some bacteria had their own version. In fact, it turned out that lots of bacteria have their own version. At the last count, the CRISPR adaptive immune system was estimated to be present in about 40% of bacteria. Among the other major group of single- celled microbes - the archaea - CRISPR is even more common. It's seen in about 90% of them. If it's that common today, CRISPR must have a history stretching back over millions - possibly even billions - of years. "It's clearly been around for a while," says Darren Griffin at the University of Kent.

The animal adaptive immune system, then, isn't nearly as unique as we thought. And there's one feature of CRISPR that makes it arguably even better than our adaptive immune system: CRISPR is heritable. When we are infected by a pathogen, our adaptive immune system learns from the experience, making our next encounter with that pathogen less of an ordeal. This is why vaccination is so effective: it involves priming us with a weakened version of a pathogen to train our adaptive immune system. Your children, though, won't benefit from the wealth of experience locked away in your adaptive immune system. They have to experience an infection - or be vaccinated - first hand before they can learn to deal with a given pathogen.

Do the following statements agree with the given information?

21 **The research carried out at the Francis Crick Institute in London is likely to be controversial.**

A) True
B) False
C) Not Given

22 **Gene editing, like the one in the upcoming research, can happen naturally in humans or other animals.**

A) True
B) False
C) Not Given

23 **CRISPR-Cas is a gene editing technique.**

A) True
B) False
C) Not Given

24 **CRISPR was noticed when the researchers saw some odd repetitive sequences at the ends of all bacterial genes.**

A) True
B) False
C) Not Given

25 **A group of American researchers made an important revelation about the CRISPR.**

A) True
B) False
C) Not Given

Choose the correct letter, A, B, C or D.

26 **'Spacer' sequences look odd because:**

A) they are a bacterial immune system
B) they are DNA from viruses
C) they aren't bacterial in origin
D) all of the above

27 **The ones, who were excited about the CRISPR's discovery, were:**

A) biologists
B) geneticists
C) physicists
D) A and B

28 **Word "learns" in the 6th paragraph means:**

A) determines
B) gains awareness
C) adapts
D) studies

29 **What makes CRISPR better than even our adaptive immune system?**

A) long history of existence
B) immortality
C) heritability
D) adaptiveness

PART 5

Questions 30–35

Read the following text for questions 30-35.

THE GIG ECONOMY

The gig economy is a labor market characterized by the prevalence of short- term contracts or freelance work as opposed to permanent jobs. This type of economy has grown rapidly with the advent of digital platforms that connect freelancers with clients. Companies like Uber, TaskRabbit, and Upwork have revolutionized the way people work, offering flexibility and new opportunities for earning income.

One of the primary advantages of the gig economy is flexibility. Workers can choose when, where, and how much they work. This is particularly beneficial for individuals who need to balance work with other commitments, such as students, caregivers, or those pursuing creative projects. Additionally, the gig economy allows workers to diversify their income streams, reducing dependence on a single employer and potentially increasing overall earnings.

However, the gig economy also presents significant challenges. Job security is a major concern as gig workers are often classified as independent contractors rather than employees., This classification means they typically do not receive paid leave, or retirement contributions. Furthermore, income in the gig economy can be unpredictable and inconsistent, benefits such as health insurance, making financial planning difficult.

The legal status of gig workers has been a contentious issue. Many argue that gig workers should be entitled to the same protections and benefits as traditional employees. Some countries and states have begun to address this issue. For example, California passed Assembly Bill 5 (AB5), which aimed to reclassify many gig workers as employees. While the law has faced challenges and pushback, it represents a significant step toward redefining the rights of gig workers.

The gig economy also impacts the traditional job market. On one hand, it creates new opportunities for employment and entrepreneurship. On the other hand, it can lead to increased competition and downward pressure on wages. Companies benefit from lower labor costs and increased flexibility, but this can come at the expense of workers' rights and job stability.

Another critical aspect of the gig economy is the role of technology. Digital platforms facilitate the connection between workers and clients, making it easier to find and complete gigs. However, these platforms often charge fees and commissions, which can reduce the overall earnings of gig workers. Additionally, there is a growing concern about the data privacy and security of gig workers, as these platforms collect extensive personal information.

The COVID-19 pandemic has further highlighted the vulnerabilities and potential of the gig economy. During the pandemic, many people turned to gig work as traditional jobs were lost or furloughed. Gig workers played a crucial role in delivering essential services, such as food delivery and transportation. However, the lack of benefits and protections for gig workers became more apparent, prompting calls for reform and better support for this workforce.

Looking forward, the gig economy is expected to continue growing, driven by technological advancements and changing work preferences. However, it will be essential to address the challenges associated with this type of work. Policies and regulations need to evolve to ensure that gig workers receive fair treatment and adequate protections.

Fill in the missing information. Write no more than ONE WORD and/or A NUMBER for each question.

The gig economy offers significant **30** _____ in terms of when and where individuals can work. Gig workers typically do not receive benefits such as health insurance or **31** _____ leave.

The classification of gig workers has been a **32** _____ issue. Digital platforms often charge **33** _____ and commissions, which can reduce gig workers' earnings.

Choose the correct answer A, B, C, or D.

34 **What is a significant challenge faced by gig workers due to their classification as independent contractors?**

A) Lack of flexibility
B) Unpredictable work hours
C) Absence of benefits
D) Increased job security

35 **How did the COVID-19 pandemic highlight the vulnerabilities of gig workers?**

A) By reducing the availability of gig work
B) By increasing the demand for traditional jobs
C) By emphasizing the lack of benefits and protections
D) By providing more stable income opportunities

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

POLAR BEARS

Polar bears are decreasing in number because of climate change. Polar bears depend on Arctic sea **Q1**_____ to hunt for their food. In a warming climate, sea ice is disappearing. Because of this, many polar bears around the Arctic are expected to disappear. Are there any places in the **Q2**_____ where polar bears might have a chance to survive when the **Q3**_____ ice disappears? What would those habitats look like? Would the polar bears that live there look or act differently? We **Q4**_____ a group of polar bears in Southeast Greenland that live in fjords. They use ice from glaciers as well as sea ice to hunt. We conducted a study looking at their movement, genetics, and demography. We found that Southeast Greenland polar bears don't travel much because of the rugged environment. **Q5**_____ bears have been isolated from other polar bears for about 200 years and are a genetically distinct **Q6**_____ . Future studies of these polar bears will help with conservation efforts for the species.

PART 2

Questions 7–13

Look at the five online reviews of the Wellington Hotel, A-E. Which review mentions the following? Write the correct letter, A-E, in boxes 7-13 on your answer sheet. NB You may use any letter more than once.

7
liking the view from the bedroom window

8
finding the receptionists welcoming

9
being pleased with the bedroom

10
becoming confused when booking a room

11
being impressed by the wide choice of food

12
staying in the hotel regularly

13
finding it inconvenient that the hotel was crowded

A) My husband and I first stayed at the Wellington a few years ago, and we've returned every year since then. When we arrive and check in, we're always treated like old friends by the staff, so we very much feel at home. Our one disappointment during our last visit was that our room overlooked the car park, but that didn't spoil our stay.

B) The hotel hardly seems to have changed in the last hundred years, and we prefer that to many modern hotels, which tend to look the same as each other. The Wellington has character! Our room was very comfortable and quite spacious. We can strongly recommend the breakfast, though we had to wait for a table as the hotel was so full. That was a bit annoying, and there was also nowhere to sit in the lounge.

C) We made our reservation by phone without problem, but when we arrived the receptionist couldn't see it on the computer system. Luckily there was a room available. It wasn't quite what we would have chosen, but it was a pleasure to sit in it with a cup of tea, and look out at the swimmers and surfers in the sea.

D) We'd be happy to stay at the Wellington again. Although there's nothing special about the rooms, the view from the lounge is lovely, and the restaurant staff were friendly and efficient. Breakfast was a highlight – there was so much on offer we could hardly decide what to eat. We'd stay another time just for that!

E) The staff all did their jobs efficiently, and were very helpful when we asked for information about the area. The only difficulty we had was making our reservation online – it wasn't clear whether payment for our deposit went through or not, and I had to call the hotel to find out. Still, once we'd arrived, everything went very smoothly, and we had a delicious dinner in the restaurant.

PART 3

Questions 14–20

The reading passage has seven sections, A-G. Choose the correct heading for each section from the list of headings below. There are more headings than sections, so you will not use all of them. Write the correct number, i-x.

List of Headings:

i) A decrease in the zebra population
ii) An obstruction on the traditional route
iii) An unknown species
iv) Some confusing information
v) Staying permanently in the Makgadikgadi
vi) Nearly a record in the zebra world
vii) Three different ways of living
viii) The original aim of the work
ix) How was the information passed on?
x) Why it is important to study zebras

14. Paragraph A **15. Paragraph B** **16. Paragraph C**
17. Paragraph D **18. Paragraph E** **19. Paragraph F**
20. Paragraph G

THE ZEBRAS' LONG WALK ACROSS AFRICA

A. For any animal to travel over 270 km in Botswana partly across the sand and low bush terrain of the Kalahari Desert is a remarkable achievement. But to do so in 11 days and without any obvious motivation, as this zebra population does, is quite extraordinary. On average their journey involves an exhausting round-trip of 588 km – between the Makgadikgadi salt pan area and the Okavango river – making it second only to the great trek undertaken by the zebra herds in the Serengeti National Park. However, what is even more incredible still in my view is that until recently it was completely unheard of.

B. Hattie Bartlam, a researcher, discovered this migration while she was tracking zebra groups, officially known as harems, by the Okavango River for her PhD, Each harem consists of a stallion and his seven or eight mares with juvenile foals. There is no loyalty between zebras beyond this social group, though harems often gather together into so- called herds. For her study, Hattie had planned to compare the small-scale movement patterns of 11 different zebra herds in the area.

C. In December, when the annual rains had transformed the roads into rivers, Hattie was, therefore, more than a little surprised when she checked the data sent by the radio collars she fits to the zebras she is tracking to find that six of the harems were 270 km away on the edge of the Makgadikgadi, a huge mineral-rich area where salt has collected over the years as water evaporates in the heat. Then, when the last of the moisture from the rains had disappeared in May the following year, five of those harems came wearily back to the Okavango. This raised the question: why, despite a plentiful supply of food and water, were the zebras being drawn eastwards to the salt pans? Even more difficult to understand was what made six of the groups travel so far, while the other five remained by the Okavango.

D. This discovery created quite a buzz in the research community. I decided to visit Hattie and she explained that a century ago the large number of Botswana's zebra and wildebeest herds and the resulting competition for grass made migration essential. One of the migration tracks went from the Okavango to Makgadikgadi. But in the late 1960s, giant fences were put up to stop foot and mouth and other diseases spreading between wildlife and domestic cattle. One of these went across the migration track. Though the animals could get round the obstacle, each leg of their journey would now be 200 km longer – an impossible distance given the lack of permanent water on the extended route. Even today, with the fence gone (it was taken down in 2004), there is dangerously little drinking water to support the zebras on the return journey to the Okavango.

E. As a zebra can live up to 20 years, the migration must have skipped at least one generation during the 40 or so years that the fences were up. This prompts another question: it has always been assumed that the young of social herbivores like zebras learn migratory behaviour from their parents, so how did the latest generation learn when and where to go? Not from their parents, who were prevented from migrating. Did they follow another species, such as elephants? We may never know.

F. Hattie's data points to the conclusion that there are several zebra populations adopting different behaviour. The first, like the vast majority of the Okavango zebras, take it easy, spending the entire year by the river. The second group, 15,000-20,000 strong, work a bit harder. They divide their time between the Makgadikgadi salt pans and the Boteti River, which is reasonably nearby. They sometimes struggle to find water in the Boteti area during the dry season, often moving 30 km in search of fresh grazing. Their reward: the juicy grass around the Makgadikgadi after the rains. The final group of zebras, whose numbers are more modest (though as yet unknown), must surely be considered as among the animal kingdom's most remarkable athletes. By moving between the Okavango and the salt pans, they enjoy the best of both worlds. But the price they pay is an extraordinary journey across Botswana.

G. Endangered species naturally tend to grab the headlines, so it's refreshing for a relatively abundant animal like the zebra to be the centre of attention for once. Zebras are a vital part of the food chain: understanding their migration, in turn, helps us to interpret the movements of their predators, and Hattie's research has shed light on the impact of fences on migratory animals. So what triggered her interest in zebras? She explains that it is easier to get funding to study exciting animals like lions. Crucial as that undoubtedly is, she believes that herbivores like zebras are key to understanding any ecosystem. The scientific community is fortunate that people like Hattie are willing to take the hard option.

PART 4

Questions 21–29

Read the following text for questions 21-29.

HOW BACTERIA INVENTED GENE EDITING

This week the UK Human Fertilisation and Embryology Authority okayed a proposal to modify human embryos through gene editing. The research, which will be carried out at the Francis Crick Institute in London, should improve our understanding of human development. It will also undoubtedly attract controversy - particularly with claims that manipulating embryonic genomes is a first step towards designer babies. Those concerns shouldn't be ignored. After all, gene editing of the kind that will soon be undertaken at the Francis Crick Institute doesn't occur naturally in humans or other animals.

It is, however, a lot more common in nature than you might think, and it's been going on for a surprisingly long time - revelations that have challenged what biologists thought they knew about the way evolution works. We're talking here about one particular gene editing technique called CRISPR-Cas, or just CRISPR. It's relatively fast, cheap and easy to edit genes with CRISPR - factors that explain why the technique has exploded in popularity in the last few years. But CRISPR wasn't dreamed up from scratch in a laboratory. This gene editing tool actually evolved in single-celled microbes.

CRISPR went unnoticed by biologists for decades. It was only at the tail end of the 1980s that researchers studying Escherichia coli noticed that there were some odd repetitive sequences at the end of one of the bacterial genes. Later, these sequences would be named Clustered Regularly Interspaced Short Palindromic Repeats - CRISPRs. For several years the significance of these CRISPRs was a mystery, even when researchers noticed that they were always separated from one another by equally odd 'spacer' gene sequences.

Then, a little over a decade ago, scientists made an important discovery. Those 'spacer' sequences look odd because they aren't bacterial in origin. Many are actually snippets of DNA from viruses that are known to attack bacteria. In 2005, three research groups independently reached the same conclusion: CRISPR and its associated genetic sequences were acting as a bacterial immune system. In simple terms, this is how it works. A bacterial cell generates special proteins from genes associated with the CRISPR repeats (these are called CRISPR associated - Cas - proteins). If a virus invades the cell, these Cas proteins bind to the viral DNA and help cut out a chunk. Then, that chunk of viral DNA gets carried back to the bacterial cell's genome where it is inserted - becoming a spacer. From now on, the bacterial cell can use the spacer to recognise that particular virus and attack it more effectively.

These findings were a revelation. Geneticists quickly realised that the CRISPR system effectively involves microbes deliberately editing their own genomes - suggesting the system could form the basis of a brand new type of genetic engineering technology. They worked out the mechanics of the CRISPR system and got it working in their lab experiments. It was a breakthrough that paved the way for this week's announcement by the HFEA. Exactly who took the key steps to turn CRISPR into a useful genetic tool is, however, the subject of a huge controversy. Perhaps that's inevitable - credit for developing CRISPR gene editing will probably guarantee both scientific fame and financial wealth.

Beyond these very important practical applications, though, there's another CRISPR story. It's the account of how the discovery of CRISPR has influenced evolutionary biology. Sometimes overlooked is the fact that it wasn't just geneticists who were excited by CRISPR's discovery - so too were biologists. They realised CRISPR was evidence of a completely unexpected parallel between the way humans and bacteria fight infections. We've known for a long time that part of our immune system "learns" about the pathogens it has seen before so it can adapt and fight infections better in future. Vertebrate animals were thought to be the only organisms with such a sophisticated adaptive immune system. In light of the discovery of CRISPR, it seemed some bacteria had their own version. In fact, it turned out that lots of bacteria have their own version. At the last count, the CRISPR adaptive immune system was estimated to be present in about 40% of bacteria. Among the other major group of single-celled microbes - the archaea - CRISPR is even more common. It's seen in about 90% of them. If it's that common today, CRISPR must have a history stretching back over millions - possibly even billions - of years. "It's clearly been around for a while," says Darren Griffin at the University of Kent.

The animal adaptive immune system, then, isn't nearly as unique as we thought. And there's one feature of CRISPR that makes it arguably even better than our adaptive immune system: CRISPR is heritable. When we are infected by a pathogen, our adaptive immune system learns from the experience, making our next encounter with that pathogen less of an ordeal. This is why vaccination is so effective: it involves priming us with a weakened version of a pathogen to train our adaptive immune system. Your children, though, won't benefit from the wealth of experience locked away in your adaptive immune system. They have to experience an infection - or be vaccinated - first hand before they can learn to deal with a given pathogen.

CRISPR is different. When a microbe with CRISPR is attacked by a virus, the record of the encounter is hardwired into the microbe's DNA as a new spacer. This is then automatically passed on when the cell divides into daughter cells, which means those daughter cells know how to fight the virus even before they've seen it. We don't know for sure why the CRISPR adaptive immune system works in a way that seems, at least superficially, superior to ours. But perhaps our biological complexity is the problem, says Griffin. "In complex organisms any minor [genetic] changes cause profound effects on the organism," he says. Microbes might be sturdy enough to constantly edit their genomes during their lives and cope with the consequences - but animals probably aren't. The discovery of this heritable immune system was, however, a biologically astonishing one. It means that some microbes write their lifetime experiences of their environment into their genome and then pass the information to their offspring – and that is something that evolutionary biologists did not think happened.

Darwin's theory of evolution is based on the idea that natural selection acts on the naturally occurring random variation in a population. Some organisms are better adapted to the environment than others, and more likely to survive and reproduce, but this is largely because they just happened to be born that way. But before Darwin, other scientists had suggested different mechanisms through which evolution might work. One of the most famous ideas was proposed by a French scientist called Jean-Bapteste Lamarck. He thought organisms actually changed during their life, acquiring useful new adaptations non-randomly in response to their environmental experiences. They then passed on these changes to their offspring.

People often use giraffes to illustrate Lamarck's hypothesis. The idea is that even deep in prehistory, the giraffe's ancestor had a penchant for leaves at the top of trees. This early giraffe had a relatively short neck, but during its life it spent so much time stretching to reach leaves that its neck lengthened slightly. The crucial point, said Lamarck, was that this slightly longer neck was somehow inherited by the giraffe's offspring. These giraffes also stretched to reach high leaves during their lives, meaning their necks lengthened just a little bit more, and so on. Once Darwin's

ideas gained traction, Lamarck's ideas became deeply unpopular. But the CRISPR immune system - in which specific lifetime experiences of the environment are passed on to the next generation - is one of a tiny handful of natural phenomena that arguably obeys Lamarckian principles.

"The realisation that Lamarckian type of evolution does occur and is common enough, was as startling to biologists as it seems to a layperson," says Eugene Koonin at the National Institutes of Health in Bethesda, Maryland, who explored the idea with his colleagues in 2009, and does so again in a paper due to be published later this year. This isn't to say that all of Lamarck's thoughts on evolution are back in vogue. "Lamarck had additional ideas that were important to him, such as the inherent drive to perfection that to him was a key feature of evolution," says Koonin. No modern evolutionary biologist goes along with that idea. But the discovery of the CRISPR system still implies that evolution isn't purely the result of Darwinian random natural selection. It can sometimes involve elements of non-random Lamarckism too – a "continuum", as Koonin puts it. In other words, the CRISPR story has had a profound scientific impact far beyond the doors of the genetic engineering lab. It truly was a transformative discovery.

Choose the correct letter, A, B or C.

21 **The research carried out at the Francis Crick Institute in London is likely to be controversial.**
A) True
B) False
C) Not Given

22 **Gene editing, like the one in the upcoming research, can happen naturally in humans or other animals.**
A) True
B) False
C) Not Given

23 **CRISPR-Cas is a gene editing technique.**
A) True
B) False
C) Not Given

24 **CRISPR was noticed when the researchers saw some odd repetitive sequences at the ends of all bacterial genes.**
A) True
B) False
C) Not Given

25 **A group of American researchers made an important revelation about the CRISPR.**
A) True
B) False
C) Not Given

Choose the correct letter, A, B, C or D.

26 **'Spacer' sequences look odd because:**
A) they are a bacterial immune system
B) they are DNA from viruses
C) they aren't bacterial in origin
D) all of the above

27 **The ones, who were excited about the CRISPR's discovery, were:**
A) biologists
B) geneticists
C) physicists
D) A and B

28 **Word "learns" in the line 44, 6th paragraph means:**
A) determines
B) gains awareness
C) adapts
D) studies

29 **What makes CRISPR better than even our adaptive immune system?**
A) long history of existence
B) immortality
C) heritability
D) adaptiveness

PART 5 Questions 30–35

Read the following text for questions 30-35.

HOW TO DEAL WITH THE ANNUAL PERFORMANCE APPRAISAL

The annual performance appraisal can help improve your productivity and provide a foundation for your work priorities. It is, however, critical to have the right attitude and approach.

Knowing what areas your superiors see as your weaknesses is the most direct way of increasing the likelihood of being considered for promotion, if that is what you are looking for.

Preparation Send your boss a summary of your achievements. Reminding your boss of activities, special assignments you did, and projects you were in charge of helps him or her create a more accurate performance appraisal. Consider keeping notes of these on a regular basis to make it easier to provide the data when required.

Create a list of questions you would like to discuss during your appraisal. This one-on- one time with your boss is an excellent opportunity to ask him or her about your role in the company, request any additional responsibilities you would like and clarify your priorities. But it is best to focus your attention around personal and professional improvements, rather than financial considerations, such as an increase in salary.

During the appraisal Present a positive attitude as soon as you enter the appraisal room. This approach may lead to a more constructive discussion of review items. Avoid taking any negative assessments that are offered as a personal attack, but rather try to take them on board calmly, because if you put the failings right you will improve your performance. A realistic assessment of your strengths and weaknesses can be one of the most beneficial ways of helping you advance in the company.

After the appraisal Create a list of personal goals based on your performance appraisal. Make the items detailed and measurable if possible. Send this list to your boss so he or she knows you took the appraisal seriously. Use this list to help achieve higher scores on your next performance appraisal.

Six months after the appraisal, ask for a mid-term review with your boss to discuss your progress. This session should be more relaxed and informal than the official review. Ask for more

feedback to help you improve. Checking in with your boss helps him or her remember your dedication as far as your job is concerned, and may help remove any criticisms before they become a review point on your next formal appraisal.

Complete the sentences below. Choose ONE WORD ONLY from the text for each answer.

By learning at an appraisal what areas of work need improving, staff can improve their chances of getting **30** _____.

It is important to think of some **31** _____ that can be used during the appraisal.

The appraisal can be a good time to ask the boss for extra **32** _____.

React **33** _____ to any criticism.

It is helpful to identify a number of individual **34** _____ arising from the appraisal comments.

Staff can request a meeting half-way through the year to look at the **35** _____ which has been achieved.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE HISTORY OF FANTA

Fanta is an American-owned German brand of fruit-flavored carbonated soft drinks created by Coca-Cola Deutschland under the leadership of German businessman Max Keith. There are more than 200 flavors worldwide. **Q1**_____ originated in Germany as a Coca-Cola alternative in 1940 due to the American trade embargo of Nazi Germany, which affected the availability of **Q2**_____ ingredients. Fanta soon dominated the **Q3**_____ market with three million cans sold in 1943. The current formulation of Fanta was developed in Italy in 1955. The German plant was cut off from Coca-Cola headquarters following America's entry into the war following the Japanese attack on Pearl Harbor in 1941. After the war, The Coca-Cola Company regained control of the plant, formula, and the trademarks to the new Fanta product - as well as the **Q4**_____ profits made during the war. In Mexico Fanta is made with sugar whereas the US version uses high fructose corn syrup. In the UK, the sugar content was reduced in 2017 to 4.6% per 100ml in the standard version (non- sugar free) to ensure that the product was below the 5g that will incur the soft drinks levy (sugary drink tax). This was a third lower than the recipe used before 2016, when some of the **Q5**_____ was replaced by sweeteners. In Albania, Bosnia and Herzegovina, Croatia, Poland, Serbia, Romania, Sweden, and some other European countries, there is Fanta Shokata based on an elderflower blossom extract drink. In Russia, however, "Shokata" is the rebranding of Fanta Citrus, which is more like a common lemonade. This version of **Q6**_____ actually has white color, like a common lemonade while the bottle is blue-colored.

PART 2

Questions 7–13

The text has six paragraphs, A-F. Which paragraph mentions the following? Write the correct letter, A-F. NB You may use any letter more than once.

7
what still needs to be done

8
the original suggestion for creating the path

9
a reason why the path opened early

10
people who no longer need to get to the park by car

11
the route of the path

12
the length of the path

13
who paid for the path

A new dual-purpose cycle and pedestrian route has been built from Atherton bus station to the country park's main entrance at Marshbrook. It avoids the main road into Atherton on the south side, and keeps mainly to less busy roads. Once the path leaves the built-up area, it goes through countryside until it reaches Marshbrook.

B) Funding for the cycle path has come largely from the country and town councils, while almost a third of it was raised through crowdfunding. Maintenance of the path is the responsibility of the county council. The cycle path was completed ahead of schedule – partly thanks to perfect weather for construction – and under budget.

C) Annie Newcome is the chief executive of Cycle Atherton, the organisation that aims to get people cycling more often and more safely. Cycle Atherton proposed the 12- kilometre-long cycle path initially, and has been active in promoting it. Ms Newcome says she is delighted that all the hard work to achieve the funding proved successful.

D) Marshbrook Country Park is a very popular recreational area, and the new path makes it much easier to reach from the town in an environmentally friendly way. At 2.5 metres wide, it is also suitable for users of wheelchairs, mobility scooters and buggies, who have not previously had access to the park without using motor vehicles.

E) Although the path is now open, work is continuing to improve the signs along it, such as warnings when the path approaches a road. New hedges and trees will also be planted along stretches of the path, to provide some shelter from the wind and to benefit wildlife.

F) Further information and a detailed map of the path including a proposed 5-kilometre extension are available online. The map can easily be downloaded and printed. Visit the county council website and follow the links to Atherton Cycle Path.

PART 3

Questions 14–20

The text has seven sections, A-G. Choose the correct heading for each section from the list of headings below. There are more headings than sections, so you will not use all of them. Write the correct number, i-viii.

List of Headings:

i) Plans for more marine protected areas
ii) A historical overview of one specific area
iii) Why more has not been done to save marine creatures
iv) What the press has missed
v) Where biodiversity has been shown to help
vi) Who is currently being blamed
vii) A reason for some optimism
viii) Various factors other than fishing

14. Paragraph A **15. Paragraph B** **16. Paragraph C**
17. Paragraph D **18. Paragraph E** **19. Paragraph F**
20. Paragraph G

MARINE ECOSYSTEMS

A. For some time now, the world's oceans and the people who fish them have been a constant source of bad environmental news: cod is effectively an endangered species of fish in some places now; every year thousands of dolphins are injured by fishing vessels; huge tuna farms are ruining the Mediterranean Sea. What is more, marine biologists recently warned that our seafood is in terminal decline. According to research published in Science last November, stocks of all the fish and shellfish that we currently eat will collapse before 2050. Or at least, that's how the media reported it.

B. However, the scientist who led the study has said that the main conclusion of his research has been buried beneath the headlines. While the danger to our seafood supply is real enough, says Boris Worm, assistant professor of marine conservation biology at Dalhousie University, Canada, there is a more serious point: that the way in which we manage the oceans is not only threatening the survival of individual species, it's upsetting the delicate balance of marine communities and thus causing the collapse of entire ecosystems. Research has shown that the number of ecosystems where all higher forms of life are extinct, so-called dead zones, is increasing. The point that many reports failed to highlight, says Worm, is that we have to revolutionise the way our marine resources are run, changing the focus from stocks and quotas to biodiversity and ecosystem protection. And to do that, we must change the way the debate about our marine resources is conducted in the public domain.

C. Around 7,500 years ago, shrinking glaciers and the resulting higher water levels led to the development of what's called the Wadden Sea, a 13,500-square-kilometre area of the North Sea. During the first 5,000 years or so, the sea pulsated with life. There was a high level of biodiversity on the seabed too, and the salt marshes and mud flats on the coast supported millions of birds. This continued until around 2,000 years ago, when human pressure began to affect it. Research has shown that some of the larger creatures disappeared more than 500 years ago. And by the late 19th century, populations of most of the other mammals and fish were severely reduced, leading to the collapse of several traditional fisheries.

D. What's interesting is that overfishing isn't the main agent of the decline, as we might assume. It's due to an ongoing combination of exploitation, habitat destruction and pollution. Coastal development, for example, destroys large areas of wetlands that support a range of species. Pollution fuels a process known as eutrophication, which kills certain seagrasses. Nutrients such as nitrogen and phosphorus contained in human and industrial waste promote the growth of tiny phytoplankton. This over-enrichment of the sea can ultimately lead to the collapse of the entire system through oxygen starvation. Most marine ecosystems have an in-built capacity to deal with a certain amount of pollution because shellfish can absorb phytoplankton. But in many cases, these have been largely removed by fishing, so the effect of any nutrient-rich pollutants entering the system is increased. In a healthy system, coastal wetlands also act as filters, so their destruction causes even more pollution. These processes have been fairly well understood for a number of years.

E. What the Science paper has demonstrated, however, is that the decline in the health of ecosystems is greater where the number of different species is low. The population of marbled rock cod around the South Atlantic island of South Georgia, for example, still hasn't recovered after the fishing industry caused its collapse during the 1970s. By contrast, North Sea cod has withstood very heavy fishing for hundreds of years, says Worm, and although it has declined substantially, it hasn't yet collapsed completely. Worm believes that, 'to have a greater number of species makes an ecosystem more robust'. His theory is backed up by evidence from experiments into how ecosystems react to change.

F. And some positive news came from the study. Worm and his colleagues were able to show that it's possible to reverse such damage as long as there are enough species. A survey of 44 protected areas revealed increases in biodiversity and fish catches close to the reserves. Worm says, 'We should be focusing our attention on protecting all of our marine resources at the ecosystem level, and managing levels of fishing, pollution and habitat disturbance to ensure that crucial services that maintain the health of the ecosystem continue to function.' To anyone who knows anything about ecology, it would appear that Worm is just stating the obvious. And many protected areas on land are now managed in this way.

G. However, there has long been a tendency to view our oceans as a limitless resource, combined with a widespread failure to make an emotional connection with most marine wildlife. True, we have created a small number of marine protected areas. 'We seem to have understood the value of protecting ecosystems in areas such as the Australian Great Barrier Reef that we consider to be particularly beautiful,' says John Shepherd, Professor of Marine Sciences at Southampton University in the UK. 'Human nature will always draw us towards those species or habitats that are more aesthetically pleasing. That's why there will always be support for protecting pandas and very little for worms, even though nematodes play a vital role in maintaining the health of an ecosystem.'

PART 4 Questions 21–31

Read the following text for questions 21-31.

THE SCIENCE OF SLEEP

We spend a third of our lives doing it. Napoleon, Florence Nightingale and Margaret Thatcher got by on four hours a night. Thomas Edison claimed it was waste of time.

So why do we sleep? This is a question that has baffled scientists for centuries and the answer is, no one is really sure. Some believe that sleep gives the body a chance to recuperate from the day's activities but in reality, the amount of energy saved by sleeping for even eight hours is miniscule - about 50 kCal, the same amount of energy in a piece of toast.

With continued lack of sufficient sleep, the part of the brain that controls language, memory, planning and sense of time is severely affected, practically shutting down. In fact, 17 hours of sustained wakefulness leads to a decrease in performance equivalent to a blood alcohol level of 0.05% (two glasses of wine). This is the legal drink driving limit in the UK.

Research also shows that sleep-deprived individuals often have difficulty in responding to rapidly changing situations and making rational judgements. In real life situations, the consequences are grave and lack of sleep is said to have been be a contributory factor to a number of international disasters such as Exxon Valdez, Chernobyl, Three Mile Island and the Challenger shuttle explosion. Sleep deprivation not only has a major impact on cognitive functioning but also on emotional and physical health. Disorders such as sleep apnoea which result in excessive daytime sleepiness have been linked to stress and high blood pressure. Research has also suggested that sleep loss may increase the risk of obesity because chemicals and hormones that play a key role in controlling appetite and weight gain are released during sleep.

What happens when we sleep? What happens every time we get a bit of shut eye? Sleep occurs in a recurring cycle of 90 to 110 minutes and is divided into two categories: non-REM (which is further split into four stages) and

REM sleep.

Non-REM sleep

Stage one: Light Sleep During the first stage of sleep, we're half awake and half asleep. Our muscle activity slows down and slight twitching may occur. This is a period of light sleep, meaning we can be awakened easily at this stage.

Stage two: True Sleep Within ten minutes of light sleep, we enter stage two, which lasts around 20 minutes. The breathing pattern and heart rate start to slow down. This period accounts for the largest part of human sleep.

Stages three and four: Deep Sleep During stage three, the brain begins to produce delta waves, a type of wave that is large (high amplitude) and slow (low frequency). Breathing and heart rate are at their lowest levels.

Stage four is characterised by rhythmic breathing and limited muscle activity. If we are awakened during deep sleep we do not adjust immediately and often feel groggy and disoriented for several minutes after waking up. Some children experience bed-wetting, night terrors, or sleepwalking during this stage. REM sleep The first rapid eye movement (REM) period usually begins about 70 to 90 minutes after we fall asleep. We have around three to five REM episodes a night.

Although we are not conscious, the brain is very active - often more so than when we are awake. This is the period when most dreams occur. Our eyes dart around (hence the name), our breathing rate and blood pressure rise. However, our bodies are effectively paralysed, said to be nature's way of preventing us from acting out our dreams.

After REM sleep, the whole cycle begins again.

How much sleep is required? There is no set amount of time that everyone needs to sleep, since it varies from person to person. Results from the sleep profiler indicate that people like to sleep anywhere between 5 and 11 hours, with the average being 7.75 hours.

Jim Horne from Loughborough University's Sleep Research Centre has a simple answer though: "The amount of sleep we require is what we need not to be sleepy in the daytime."

Even animals require varied amounts of sleep: Species Average total sleep time per day Python 18 hrs Tiger 15.8 hrs Cat 12.1 hrs Chimpanzee 9.7 hrs Sheep 3.8 hrs Africanelephant 3.3 hrs Giraffe 1.9 hr

The current world record for the longest period without sleep is 11 days, set by Randy Gardner in 1965. Four days into the research, he began hallucinating. This was followed by a delusion where he thought he was a famous footballer. Surprisingly, Randy was actually functioning quite well at the end of his research and he could still beat the scientist at pinball.

Choose the correct letter, A (True), B (False) or C (Not Given).

21 Thomas Edison slept 4 hours a night.
A) True
B) False
C) Not Given

22 Scientists don't have a certain answer for why we have to sleep.
A) True
B) False
C) Not Given

23 Lack of sleep might cause various problems.
A) True
B) False
C) Not Given

24 Sleep-deprivation may be the cause of anorexia.
A) True
B) False
C) Not Given

25 There are four stages of the REM sleep.
A) True
B) False
C) Not Given

26 According to Jim Horne, we need to sleep as much as it takes to not be sleepy during the day.
A) True
B) False
C) Not Given

Choose the correct letter, A, B, C or D.

27 During the Light Sleep stage:
A) Muscle activity increases
B) Jiggling might occur
C) It is not easy to be woken up
D) After waking up, one may experience slight disorientation

28 Heart rate is at the lowest level during:
A) Light Sleep stage
B) Rem Sleep
C) True Sleep stage
D) Third Sleep stage

29 The brain activity is really high:
A) During REM sleep
B) During the stage of True Sleep
C) When we are awake
D) During the Deep sleep stage

30 Humans require at least:
A) 7.75 hours of sleep
B) 5 hours of sleep
C) 8 hours
D) There is no set amount of time

31 Pythons need:
A) Less sleep than tigers
B) Twice as much sleep as cats
C) Almost ten times more sleep than giraffes
D) More sleep than any other animal in the world

PART 5

Questions 32–35

Read the following text for questions 32-35.

UNDERSTANDING HARES

With its wild stare, swift speed and secretive nature, the UK's brown hare is the rabbit's mysterious cousin. Even in these days of agricultural intensification, the hare is still to be seen in open countryside, but its numbers are falling. A

Like many herbivores, brown hares spend a relatively large amount of their time feeding. They prefer to do this in the dark, but when nights are short, their activities do spill into daylight hours. Wherever they live, hares appear to have a fondness for fields with a variety of vegetation, for example short as well as longer clumps of grasses. Studies have demonstrated that they benefit from uncultivated land and other unploughed areas on farms, such as field margins. Therefore, if farmers provided patches of woodland in areas of pasture as well as assorted crops in arable areas, there would be year-round shelter and food, and this could be the key to turning round the current decline in hare populations. B

Brown hares have a number of physical adaptations that enable them to survive in open countryside. They have exceptionally large ears that move independently, so that a range of sounds can be pinpointed accurately. Positioned high up on their heads, the hares' large golden eyes give them 360° vision, making it hard to take a hare by surprise. Compared to mammals of a similar size, hares have a greatly enlarged heart and a higher volume of blood in their bodies, and this allows for superior speed and stamina. In addition, their legs are longer than those of a rabbit, enabling hares to run more like a dog and reach speeds of up to 70 kph. C

Brown hares have unusual lifestyles for their large size, breeding from a young age and producing many leverets (babies). There are about three litters of up to four leverets every year. Both males and females are able to breed at about seven months old, but they have to be quick because they seldom live for more than two years. The breeding season runs from January to October, and by late February most females are pregnant or giving birth to their first litter of the year. So it seems strange, therefore, that it is in March, when the breeding season is already underway, that hares seemingly go mad: boxing, dancing, running and fighting. This has given rise to the age-old reference to 'mad March hares'. In fact, boxing occurs throughout the breeding season, but people tend to see this behaviour more often in March. This is because in the succeeding months, dusk – the time when hares are most active – is later, when fewer people are about. Crops and vegetation are also taller, hiding the hares from view. Though it is often thought that they are males fighting over females, boxing hares are usually females fighting off males. Hares are mostly solitary, but a female fights off a series of males until she is ready to mate. This occurs several times through the breeding season because, as soon as the female has given birth, she will be ready to mate again. D

But how can females manage to do this while simultaneously feeding themselves and rearing their young? The reason is that hares have evolved such self-sufficient young. Unlike baby rabbits, leverets are born furry and mobile. They weigh about 100 g at birth and are immediately left to their own devices by their mothers. A few days later, the members of the litter creep away to create their own individual resting places, known as 'forms'. Incredibly, their mother visits them only once every 24 hours and, even then, she only suckles them for a maximum of five minutes each. This lack of family contact may seem harsh to us, but it is a strategy that draws less attention from predators. At the tender age of two weeks, leverets start to feed themselves, while still drinking their mother's milk. They grow swiftly and are fully weaned at four weeks, reaching adult weight at about six months. E

Research has shown that hares' milk is extremely rich and fatty, so a little goes a long way. In order to produce such nutritious milk, females need a high-quality, high-calorie diet. Hares are selective feeders at the best of times: unlike many herbivores, they can't sit around waiting to digest low-quality food – they need high- energy herbs and other leaves in order to sprint. This causes them problems when faced with the smallest alterations in food availability and abundance. So, as well as reductions in the diversity of farmland habitat, the decline in the range of food plants is injurious to hares. F

The rapid turnaround in the breeding cycle suggests that hares should, in principle, be able to increase their populations quickly to exploit new habitats. They certainly used to: studies show that hares evolved on the open plains and spread rapidly westward from the Black Sea after the last ice age (though they were probably introduced to Britain as a species to be hunted for the pot by the Romans). But today's hares are thwarted by the lack of rich farmland habitat. When the delicate herbs and other plants they rely on are ploughed up or poisoned by herbicides, these wonderful, agile runners disappear too, taking with them some of the wildness from our lives.

Complete the summary below. Choose ONE WORD ONLY from the text for each answer.

Brown hares

The brown hare is well known for its ability to run fast, at speeds of up to 70 kph, largely due to the length of its legs as well as the unusual size of its heart. An increased amount of blood also gives it the necessary **32** _____ to continue running fast for some time. A running hare resembles the **33** _____ more closely than its relative, the rabbit.

The hare has some other characteristics that help it to avoid capture. The first is its excellent all-round **34** _____. This means that predators cannot easily creep up behind it. Another feature is its ability to position its massive **35** _____ separately, to sense the slightest indication of danger.

5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

THE JOY OF READING

Have you ever wondered why people read? Why reading is one of the few things that has consistently remained part of society for thousands of years? Even before **Q1**_____ became available to the general public, stories were told around campfires, passed down from generation to generation. First of all, **Q2**_____ are a good way to escape from your ordinary life, to get immersed in another world, if only for a little time. While reading, you can imagine yourself in different situations that range from unlikely to impossible, but in the moment that doesn't matter. Whether you're suffering from depression or are just bored, reading is a great distraction. Similarly, another reason **Q3**_____ are attracted to stories, is because they are lonely, very often they feel as if they are the only ones in the world going through something difficult. Identifying with a fictional character can make a big difference in helping people understand that they are not alone. Other people read because it can be a good way to relax. It can be very nice to sit down and enjoy a good plot unfold, to watch the actions of fictional characters from the side, and to see the consequences of these **Q4**_____ , without having to bear any responsibility. Lastly, people read because it is the easiest **Q5**_____ to gain knowledge in a certain area. Instead of finding a teacher, you can just find a **Q6** _____ , sit down, and spend a few hours reading. This way you can study wherever you want, whenever you want at your own pace. There are countless books in the world, and whoever you are, whatever you're feeling, there is definitely a book out there, just waiting for you to discover it.

PART 2

Questions 7–14

Read the notices 7-14 and the texts A-P. Decide which text matches with the situation described in each notice. Each text can be used ONCE only.

7

NO BICYCLES AGAINST GLASS PLEASE

8

MESSAGE — Harry, Ron says he missed the bus. He'll have to wait an hour for the next one. Can you tell Sue he's sorry.

9

NO FRESH FISH TODAY — We regret that due to recent bad weather no fresh fish has been delivered.

10

IT IS FORBIDDEN TO CHEW GUM ON THE SCHOOL PREMISES. ANYONE CAUGHT CHEWING GUM WILL BE REPORTED TO THE PRINCIPAL

11

BE PREPARED — SCHOOL ENTRANCE AHEAD — DEAD SLOW

12

FRESHLY PAINTED — DO NOT TOUCH

13

SECURITY — Please don't leave luggage unattended. Any unattended luggage will be removed and be destroyed.

14

BOOKS IN THE CAFE — Please remember that only books that have been paid for may be taken into the book shop cafe.

A) The weather is responsible for the problem.

B) The fish shop is responsible for the problem

C) You must not take any unpaid for books to the cafe.

D) You should pay for your books in the cafe.

E) Do not leave your bicycle touching the window.

F) You must always be with your luggage.

G) Harry is apologising.

H) You must not eat chewing gum in school.

I) Chewing gum is bad for you.

J) You have to paint something.

K) Ron is apologising.

L) They will destroy unattended luggage.

M) Somebody needs to enter the school.

N) Broken glass may damage your bicycle tyres.

O) Somebody needs to change speed.

P) You must not touch something

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

I) Reasons for immigration.
II) European immigrants.
III) American immigration in the 60s.
IV) Prohibition of slavery in 19thC.
V) Measures to reduce immigration.
VI) Looking for a new opportunity.
VII) Survival of immigration despite economic problems.
VIII) Religious discrimination

15. Paragraph A **16. Paragraph B** **17. Paragraph C**
18. Paragraph D **19. Paragraph E** **20. Paragraph F**

IMMIGRATIONS TO THE UNITED STATES

A. The United States of America has long been the world's chief receiving nation for immigrants. An immigrant is a person who leaves his or her country to settle and live in another country. Over the years, many millions of people have uprooted and left family and friends to move to America. Some felt forced to leave because they feared for their lives due to dangers present in their home countries. For example, many immigrants left countries that were at war or that didn't give them the freedom to practice their faith. Immigrants also left their native lands if they couldn't find work or enough food to live. Whatever the reason, immigrants usually have had to sacrifice a life that is familiar for one that is unknown.

B. The United States was founded by immigrants. From the 1600s through 1775, European colonists settled in the land that is now the United States. Most of these immigrants were from England. Others arrived from France, Germany, Ireland, Scotland, and Spain. Many of these colonists came here looking for economic opportunity. They wanted better land to farm or better work. Others came to escape religious persecution. Some were even convicts brought over from English jails. West Africans also immigrated to the American colonies, but they came against their will. They were captured, sold into slavery, and shipped to the colonies.

C. Since the United States was established in the late 1700s, it has seen three waves of immigration. The first wave of American immigration took place from 1820 to 1870. Over seven million people made the voyage to America, mostly from northern and western Europe. About a third of these immigrants were Irish people trying to escape a famine that plagued Ireland in the mid-1840s. Another third of the immigrants from this wave were German. The Chinese also began to immigrate to America during this time. They got word of the Gold Rush in California. They came to work in the mines and get rich.

D. This flood of immigrants wasn't always welcome by those already in America. Some feared these newcomers would take away their jobs. Others didn't like the politics, customs, and/or religions the new immigrants brought with them. For example, many Irish people were discriminated against for being Roman Catholic. The Chinese also suffered greatly from discrimination.

E. The third wave of immigration began in 1965 and continues today. Most immigrants in this wave have come from Asian countries as well as South American countries, Caribbean countries, and Mexico. A large number of these immigrants have settled in the East and Midwest. However, many others have moved to California.

F. Most immigrants have come to America with the hope of building a better life. However, they were sometimes met with hatred by the people already living in the country who feared the economic and cultural impacts of these newcomers. While this discrimination and the economic downfall of the Great Depression had a negative effect on immigration, American immigration has managed to survive.

PART 4

Questions 21–29

Read the following text for questions 21-29.

COAL AND THE ENVIRONMENT

Coal is expected to continue to account for almost 27 per cent of the world's energy needs. However, with growins international awareness of pressures on the environment and the need to achieve sustainable development of energy resources, the way in which the resource is extracted, transported and used is critical. A wide range of pollution control devices and practices is in place at most modern mines and significant resources are spent on rehabilitating mined land. In addition, major research and development programmes are being devoted to lifting efficiencies and reducing emissions of greenhouse gases during coal consumption. Such measures are helping coal to maintain its status as a major supplier of the world's energy needs.

The coal industry has been targeted by its critics as a significant contributor to the greenhouse effect. However, the greenhouse effect is a natural phenomenon involving the increase in global surface temperature due to the presence of greenhouse gases – water vapour, carbon dioxide, tropospheric ozone, methane and nitrous oxide – in the atmosphere. Without the greenhouse effect, the earth's average surface temperature would be 33-35 degrees C lower, or -15 degrees Life on earth, as we know it today, would not be possible. There is concern that this natural phenomenon is being altered by a greater build-up of gases from human activity, perhaps giving rise to additional warming and changes in the earth's climate. This additional build- up and its forecast outcome has been called the enhanced greenhouse effect. Considerable uncertainty exists, however, about the enhanced greenhouse effect, particularly in relation to the extent and timing of any future increases in global temperature.

Greenhouse gases arise from a wide range of sources and their increasing concentration is largely related to the compound effects of increased population, improved living standards and changes in lifestyle. From a current base of 5 billion, the United Nations predicts that the global population may stabilise in the twenty-first century between 8 and 14 billion, with more than 90 per cent of the projected increase taking place in the world's developing nations. The associated activities to support that growth, particularly to produce the required energy and food, will cause further increases in greenhouse gas emissions. The challenge, therefore, is to attain a sustainable balance between population, economic growth and the environment.

The major greenhouse gas emissions from human activities are carbon dioxide (CO_2), methane and nitrous oxide.

Chlorofluorocarbons (CFCs) are the only major contributor to the greenhouse effect that does not occur naturally, coming from such sources as refrigeration, plastics and manufacture. Coal's total contribution to greenhouse gas emissions is thought to be about 18 per cent, with about half of this coming from electricity generation.

The world-wide coal industry allocates extensive resources to researching and developing new technologies and ways of capturing greenhouse gases. Efficiencies are likely to be improved dramatically, and hence CO2 emissions reduced, through combustion and gasification techniques which are now at pilot and demonstration stages. Clean coal is another avenue for improving fuel conversion efficiency. Investigations are under way into superclean coal (3-5 per cent ash) and ultraclean coal (less than 1 per cent ash). Superclean coal has the potential to enhance the combustion efficiency of conventional pulverised fuel power plants. Ultraclean coal will enable coal to be used in advanced power systems such as coal-fired gas turbines which, when operated in combined cycle, have the potential to achieve much greater efficiencies.

Defendants of mining point out that, environmentally, coal mining has two important factors in its favour. It makes only

temporary use of the land and produces no toxic chemical wastes. By carefully pre-planning projects, implementing pollution control measures, monitoring the effects of mining and rehabilitating mined areas, the coal industry minimises the impact on the neighbouring community, the immediate environment and long-term land capability. Dust levels are controlled by spraying roads and stockpiles, and water pollution is controlled by carefully separating clean water runoff from runoff which contains sediments or salt from mine workings. The latter is treated and re- used for dust suppression. Noise is controlled by modifying equipment and by using insulation and sound enclosures around machinery. Since mining activities represent only a temporary use of the land, extensive rehabilitation measures are adopted to ensure that land capability after mining meets agreed and appropriate standards which, in some cases, are superior to the land's pre-mining condition. Where the mining is underground, the surface area can be simultaneously used for forests, cattle grazing and crop raising, or even reservoirs and urban development, with little or no disruption to the existing land use. In all cases, mining is subject to stringent controls and approvals processes.

In open-cut operations, however, the land is used exclusively for mining but land rehabilitation measures generally progress with the mine's development. As core samples are extracted to assess the quality and quantity of coal at a site, they are also analysed to assess the ability of the soil or subsoil material to support vegetation. Topsoils are stripped and stockpiled prior to mining for subsequent dispersal over rehabilitated areas. As mining ceases in one section of the open-cut, the disturbed area is reshaped. Drainage within and off the site is carefully designed to make the new land surface as stable as the local environment allows: often dams are built to protect the area from soil erosion and to serve as permanent sources of water. Based on the soil requirements, the land is suitably fertilised and revegetated.

Choose the appropriate letter A-D.

21 **The global increase in greenhouse gases has been attributed to**

A) industrial pollution in developing countries.
B) coal mining and electricity generation.
C) reduced rainfall in many parts of the world.
D) trends in population and lifestyle.

22 **The proportion of all greenhouse gases created by coal is approximately**

A) 14 per cent.
B) 18 per cent.
C) 27 per cent.
D) 90 per cent.

23 **Current research aims to increase the energy-producing efficiency of coal by**

A) burning it at a lower temperature.
B) developing new gasification techniques.
C) extracting CO2 from it.
D) recycling greenhouse gases.

24 **Compared with ordinary coal, new, 'clean' coals may generate power**

A) more cleanly and more efficiently.
B) more cleanly but less efficiently.
C) more cleanly but at higher cost.
D) more cleanly but much more slowly.

25 **To control dust at mine sites, mining companies often use**

A) chemicals which may be toxic.
B) topsoil taken from the site before mining.
C) fresh water from nearby dams.
D) runoff water containing sediments.

Do the following statements reflect the opinions of the writer in the Reading Passage?

26 **The coal industry should be abandoned in favour of alternative energy sources because of the environmental damage it causes.**

A) True
B) False
C) Not Given

27 **The greatest threats to the environment are the gases produced by industries which support the high standard of living of a growing world population.**

A) True
B) False
C) Not Given

28 **World population in the twenty-first century will probably exceed 8 billion.**

A) True
B) False
C) Not Given

29 **CFC emissions have been substantially reduced in recent years.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

TALC POWDER

Agriculture and Food, in Europe, explains that chewing gums has four main components. "The most important of them is the gum base," he says. "It's the gum base that puts the chew into chewing gum. It binds all the ingredients together, creating a soft, smooth texture. To this the manufacturer the adds sweeteners, softeners and flavourings. Our talc is used as a filler in the gum base. The amount varies between, say, ten and 35 per cent, depending on the type of gum. Fruit flavoured chewing gum, for example, is slightly acidic and would react with the calcium carbonate that the manufacturer might otherwise use as a filler. Talc, on the other hand, makes an ideal filler because it's non-reactive chemically. In the factory, talc is also used to dust the gum base pellets and to stop the chewing gum sticking during the lamination and packing process," Delord adds.

The chewing gum business is, however, just one example of talc's use in the food sector. For the past 20 years or so, olive oil processors in Spain have been taking advantage of talc's unique characteristics to help them boost the amount of oil they extract from crushed olives. According to Patrick Delord, talc is especially useful for treating what he calls "difficult" olives. After the olives are harvested – preferably early in the morning because their taste is better if they are gathered in the cool of the day – they are taken to the processing plant. There they are crushed and then stirred for 30-45 minutes. In the old days, the resulting paste was passed through an olive press but nowadays it's more common to add water and centrifuge the mixture to separate the water and oil from the solid matter. The oil and water are then allowed to settle so that the olive oil layer can be decanted off and bottle. "Difficult" olives are those that are more reluctant than the norm to yield up their full oil content. This may be attributable to the particular species of olive, or to its water content and the time of year the olives are collected – at the beginning and the end of the season their water content is often either too high or too low. These olives are easy to recognize because they produce a lot of extra foam during the stirring process, a consequence of an excess of a fine sold that acts as a natural emulsifier. The oil in this emulsion is lost when the water is disposed of. Not only that, if the wastewater is disposed of directly into local fields – often the case in many smaller processing operations – the emulsified oil may take some time to biodegrade and so be harmful to the environment.

"If you add between a half and two per cent of talc by weight during the stirring process, it absorbs the natural emulsifier in the olives and so boosts the amount of oil you can extract," says Delord. "In addition, talc's flat, 'platey' structure helps increase the size of the oil droplets liberated during stirring, which again improves the yield. However, because talc is chemically inert, it doesn't affect the colour, taste, appearance or composition of the resulting olive oil."

If the use of talc in olive oil processing and in chewing gum is long-established, new applications in the food and agriculture industries are also constantly being sought by Luzenac. One such promising new market is fruit crop protection, being pioneered in the US. Just like people, fruit can get sunburned. In fact, in very sunny regions up to 45 per cent of a typical crop can be affected by heat stress and sunburn. However, in the case of fruit, it's not so much the ultraviolet rays which harm the crop as the high surface temperature that the sun's rays create.

To combat this, farmers normally use either chemicals or spray a continuous fine canopy of mist above the fruit trees or bushes. The trouble is, this uses a lot of water – normally a precious commodity in hot, sunny areas – and it is therefore expensive. What's more, the ground can quickly become waterlogged. "So our idea was to coat the fruit with talc to protect it from the sun," says Greg Hunter, a marketing specialist who has been with Luzenac for ten years. "But to do this, several technical challenges had first to be overcome. Talc is very hydrophobic: it doesn't like water. So in order to have a viable product we needed a wettable powder – something that would go readily into suspension so that is could be sprayed onto the fruit. It also had to break the surface tension of the cutin (the natural waxy, waterproof layer on the fruit) and of course, it had to wash off easily when the fruit was harvested. No-one's going to want an apple that's covered in talc."

Complete the following summary of the paragraphs of Reading Passage, using NO MORE THAN TWO WORDS from the Reading Passage for each answer.

Spanish olive oil industry has been using talc in the oil extraction process for about **30**_____ years. It is useful in dealing with difficult olives which often produce a high amount of **31**_____ because of the high content of solid materials.

When smaller factories release **32**_____, it could be **33**_____ to the environment because it is hard to **34**_____ and usually takes time as it contains emulsified oil. However, talc powder added in the process is able to absorb the emulsifier. It improves the oil extraction production because with the aid of talc powder, the size of oil **35**_____ increased.

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

HOW DOES FARMING IMPACT AIR QUALITY?

Farming releases small particles of pollution into the air. This **Q1** _____s the quality of the surrounding air and has serious impacts on human health. In fact, air pollution caused by **Q2**_____ results in 17,900 deaths in the US every year! We wanted to understand more about which farming processes and foods caused the most **Q3**_____. That way we could look for ways to reduce it. We calculated the total farming-related air pollution released in the US. We broke this data down into different categories for further analysis. We found that animal waste, fertilizer, and tilling **Q4**_____ the vast majority of deaths. Animal-based foods caused nearly four times more deaths than plant-based foods. Finally, we looked at **Q5** _____ that could decrease air pollution. We found that changes in diet were the most effective. But farming interventions alone could lower **Q6**_____ considerably.

PART 2

Questions 7–14

Look at the five reviews of rice cookers, A-E. For which rice cooker are the following statements true? Write the correct letter, A-E, in boxes 7-14 on your answer sheet. NB You may use any letter more than once.

7
The handles at the side are hard to use.

8
It cooks brown rice without making a mess.

9
It automatically switches setting to keep to rice warm when cooked.

10
It's difficult to get the removable top really clean.

11
A selection of recipes is provided with the cooker.

12
It has a handle at the top for carrying the cooker safely.

13
The outside of the cooker doesn't get too hot.

14
You can put the pot in the dishwasher.

A Ezy Rice Cooker This has a 1.8 litre pot and a stainless steel exterior. It has a separate glass lid, and the handle on the lid stays cool. It produces perfectly cooked white rice, but tends to spit when cooking brown rice. There are slight dirt traps around the rim of the lid, and neither the pot nor the lid is dishwasher safe.

B Family Rice Cooker This has a plastic exterior and a flip-top lid. The lid locks when closed and becomes a secure handle to carry the cooker. The aluminium interior pot is quite difficult to clean, and it can't be put in a dishwasher. It's programmed to adjust the temperature once the rice is done so that it stops cooking but doesn't get cold.

C Mini Rice Cooker This has a flip-top lid and a 0.3 litre capacity. The interior pot is made of non-stick aluminium and is dishwasher safe. This rice cooker is ideal when cooking for one. However it does not have any handles at the side, and water sometimes overflows when cooking brown rice.

D VPN Rice Cooker This has a painted steel exterior with a handle on each side and a steel inner pot. It has a lift-off lid and comes with a booklet including a range of ideas for rice dishes. However, the keep-warm setting must be manually selected and the handles are tricky to grip.

E S16 Rice cooker This is simple to use, not spitting or boiling over even when cooking brown rice. The exterior stays cool when in use, so there's no danger of burning your hand. However, the lack of handles is a nuisance, and a recipe book would have been useful.

PART 3

Questions 15–20

The text has six sections, A-F. Choose the correct heading for each section from the list of headings below. Write the correct number, i-vii, in boxes 15-20 on your answer sheet.

List of Headings:

I) Developing an item that appears true to life
II) Extending the project to other endangered species
III) A short but intensive investigation with longer-term follow-up
IV) Problems facing sea turtles at a global level
V) Collection of eggs and their possible onward routes
VI) Intensive and large-scale poaching in one location
VII) Why catching the poachers may not solve the problem

15. Paragraph A **16. Paragraph B** **17. Paragraph C**
18. Paragraph D **19. Paragraph E** **20. Paragraph F**

PREVENTING THE THEFT OF TURTLE EGGS

Conservationists and law enforcement have struggled to prevent wildlife trafficking. But could some plastic eggs and GPS trackers change the game?

A. Humans have been eating sea turtle eggs (and killing adult turtles for meat) for millennia. However, as human populations exploded and as sea turtles began to confront additional threats such as intensive fishing, beach development and climate change, sea turtle populations declined precipitously. Today, all but one of the world's seven species of sea turtles are considered threatened according to the IUCN* Red List. And the one that's not – the flatback turtle – is listed as data deficient, which means scientists simply don't know how it's doing.

B. One major problem is that every year millions of sea turtle eggs are illegally taken by poachers for sale on the black market. The situation is particularly serious in Nicaragua, in Central America, which is home to four sea turtle species. Kim Williams-Guillen, who works for conservation body Paso Pacifico, described the poaching of sea turtle nests on the beaches of Nicaragua as 'uncontrolled, unregulated, extensive and contested'. Even the best-protected beaches are plundered to some extent and it's not uncommon to see poachers digging up nests just meters from tourists watching sea turtles laying their clutch at night, she said. This poaching becomes particularly frenzied during the arribadas – mass laying events where thousands of turtles nest on the same beach for a single night in a biological strategy to overwhelm natural predators.

C. 'Even with armed guards, the numbers of poachers overwhelm military personnel by ten to twenty to one,' Williams-Guillen said. 'Although many poachers are locals with limited resources, during these arribadas there are influxes of gangs of poachers from larger cities outside local communities. These are not just local poor people without other options.' But to protect the country's sea turtles, Williams-Guillen said conservationists shouldn't just depend on catching low-level operators. 'If one poacher decides to stop, another one will just step into his place... we need to know more about the middlemen and people higher up in the distribution chain,' she said.

D. Paso Pacifico's solution is the creation of high-tech sea turtle eggs: fake eggs convincingly crafted to look like the real thing, but which contain GPS tracking devices. These have the potential to reveal the destination markets for trafficked sea turtle eggs. Making convincing sea turtle eggs is not easy, and Paso Pacifico is still working on perfecting a prototype. In particular, it's proving quite problematic to create the right texture, since sea turtle eggs are not covered in a hard shell like those of birds, but are quite flexible. So Paso Pacifico brought in Lauren Wilde, a special effects artist in the US, to create a convincing outer shell. First, Wilde had to get her hands on the real thing. Since it's illegal to send sea turtle eggs over the border, Wilde is using land turtle eggs from California. 'It was really eye opening and important for me to feel these eggs and how the shell bends a little,' she said. To get the GPS device inside the shell, Paso Pacifico is using 3D printers to make a plastic ball which will then have a GPS transmitter fitted inside. This will take the place of the embryo inside the shell. Lastly the fake shells will be sealed with silicone, waterproofing them.

E. Sea turtles on average lay around 100 eggs in a nest, and once the fake eggs are finished they will be slipped in with the real ones. Williams-Guillen said it might even be possible to deliver fake eggs into nests while poachers are at work. Wary of tourists, poachers will often back off if strangers come near and then return when they have gone. 'It would be pretty easy to drop an egg in the dark into a nest they have been digging up,' she said. Once the poacher picks up the fake egg along with the real ones, conservationists and law enforcement agents will be able to track them. Experts believe most of the stolen eggs eventually make their way out of Nicaragua, possibly to El Salvador or Guatemala. However, there is also growing concern that sea turtle eggs from Central America are actually heading to the USA, from where they are sold on to other countries around the world.

F. To date, Paso Pacifico has yet to put a single fake egg in a nest. But Williams-Guillen said she isn't too concerned that publicity for their scheme will result in poachers looking for the eggs. 'The vast majority of the poaching is happening at night, so already it is hard to tell [the eggs] apart, and at this point, poachers and middlemen are not closely inspecting eggs, but rather shoving them into a sack as quickly as possible.' Of course, poachers will eventually become aware of the prospect of fake eggs among the real ones – especially when customers try to bite into an egg and break their teeth on the GPS transmitter instead. So, Paso Pacifico plans to do a massive deployment of as many fakes as possible to gather a lot of data before poachers get wise. Knowing where the eggs go will allow conservationists and law enforcement agents to focus their resources on the right places – whether it be through awareness-building campaigns or crackdowns on illegal sellers. And eventually Paso Pacifico hopes to share the technology with interested parties around the world.

PART 4

Questions 21–29

Read the following text for questions 21-29.

BRITAIN NEEDS STRONG TV INDUSTRY

Comedy writer Armando Iannucci has called for an industry-wide defence of the BBC and British programme-makers. "The Thick of It" creator made his remarks in the annual MacTaggart Lecture at the Edinburgh TV Festival.

"It's more important than ever that we have more strong, popular channels... that act as beacons, drawing audiences to the best content," he said. Speaking earlier, Culture Secretary John Whittingdale rejected suggestions that he wanted to dismantle the BBC.

'Champion supporters'

Iannucci co-wrote "I'm Alan Partridge", wrote the movie "In the Loop" and created and wrote the hit "HBO" and "Sky Atlantic show Veep". He delivered the 40th annual MacTaggart Lecture, which has previously been given by Oscar winner Kevin Spacey, former BBC director general Greg Dyke, Jeremy Paxman and Rupert Murdoch. Iannucci said: "Faced with a global audience, British television needs its champion supporters."

He continued his praise for British programming by saying the global success of American TV shows had come about because they were emulating British television. "The best US shows are modelling themselves on what used to make British TV so world-beating," he said. "US prime-time schedules are now littered with those quirky formats from the UK - the "Who Do You Think You Are"'s and the variants on "Strictly Come Dancing" - as well as the single-camera non-audience sitcom, which we brought

into the mainstream first. We have changed international viewing for the better."

With the renewal of the BBC's royal charter approaching, Iannucci also praised the corporation. He said: "If public service broadcasting - one of the best things we've ever done creatively as a country - if it was a car industry, our ministers would be out championing it overseas, trying to win contracts, boasting of the British jobs that would bring." In July, the government issued a green paper setting out issues that will be explored during negotiations over the future of the BBC, including the broadcaster's size, its funding and governance.

Primarily Mr Whittingdale wanted to appoint a panel of five people, but finally he invited two more people to advise on the channer renewal, namely former Channel 4 boss Dawn Airey and journalism professor Stewart Purvis, a former editor-in-chief of ITN. Iannucci bemoaned the lack of "creatives" involved in the discussions.

"When the media, communications and information industries make up nearly 8% our GDP, larger than the car and oil and gas industries put together, we need to be heard, as those industries are heard. But when I see the panel of experts who've been asked by the culture secretary to take a root and branch look at the BBC, I don't see anyone who is a part of that cast and crew list. I see executives, media owners, industry gurus, all talented people - but not a single person who's made a classic and enduring television show."

'Don't be modest'

Iannucci suggested one way of easing the strain on the licence fee was "by pushing ourselves more commercially abroad".

"Use the BBC's name, one of the most recognised brands in the world," he said. "And use the reputation of British television across all networks, to capitalise financially oversees. Be more aggressive in selling our shows, through advertising, through proper international subscription channels, freeing up BBC Worldwide to be fully commercial, whatever it takes.

"Frankly, don't be icky and modest about making money, let's monetise the bezeesus Mary and Joseph out of our programmes abroad so that money can come back, take some pressure off the licence fee at home and be invested in even more ambitious quality shows, that can only add to our value."

Mr Whittingdale, who was interviewed by ITV News' Alastair Stewart at the festival, said he wanted an open debate about whether the corporation should do everything it has done in the past. He said he had a slight sense that people who rushed to defend the BBC were "trying to have an argument that's never been started".

"Whatever my view is, I don't determine what programmes the BBC should show," he added. "That's the job of the BBC." Mr Whittingdale said any speculation that the Conservative Party had always wanted to change the BBC due to issues such as its editorial line was "absolute nonsense".

Do the following statements agree with the information in the reading text? Choose A (True), B (False) or C (Not Given).

21 Armando Iannucci expressed a need of having more popular channels.
A) True
B) False
C) Not Given

22 John Whittingdale wanted to dismantle the BBC.
A) True
B) False
C) Not Given

23 Iannucci delivered the 30th annual MacTaggart Lecture.
A) True
B) False
C) Not Given

24 Ianucci believes that British television has contributed to the success of American TV-shows.
A) True
B) False
C) Not Given

25 There have been negotiations over the future of the BBC in July.
A) True
B) False
C) Not Given

Choose the correct letter, A, B, C or D.

26 Ianucci praised everything EXCEPT
A) US shows
B) British shows
C) Corporation
D) British programming

27 To advise on the charter renewal Mr Whittingdale appointed a panel of
A) five people
B) two people
C) seven people
D) four people

28 Who of these people was NOT invited to the discussion concerning BBC renewal?
A) Armando Iannucci
B) Dawn Airey
C) John Whittingdale
D) Stewart Purvis

29 There panel of experts lacks:
A) media owners
B) people who make enduring TV-shows
C) gurus of Television industry
D) top executives

PART 5 Questions 30–35

Read the text below and answer Questions 30-35.

AIR RAGE

The first recorded case of an airline passenger turning seriously violent during a flight, a phenomenon now widely known as “air rage”, happened in 1947 on a flight from Havana to Miami. A drunk man assaulted another passenger and bit a flight attendant. However, the man escaped punishment because it was not then clear under whose legal control a crime committed on plane was, the country where the plane was registered or the country where the crime was committed. In 1963, at the Tokyo convention, it was decided that the laws of the country where the plane is registered take precedence. The frequency of air rage has expanded out of proportion to the growth of air travel.

Until recently few statistic were gathered about air rage, but those that have been indicate that passengers are increasingly likely to cause trouble or engage in violent acts. For example, in 1998 there were 266 air rage incidents out of approximately four million passengers, a 400% increase from 1995. In the same period American Airlines showed a 200% rise. Air travel is predicted to rise by 5% internationally by 2010 leading to increased airport congestion. This, coupled with the flying public's increased aggression, means that air rage may become a major issue in coming years. Aside from discomfort and disruption, air rage poses some very real dangers to flying. The most extreme of these is when out of control passengers enter the cockpit. This has actually happened on a number of occasions, the worst of which have resulted in the death and injury of pilots or the intruder taking control of the plane, almost resulting in crashes. In addition, berserk passengers sometimes attempt to open the emergency doors while in flight, putting the whole aircraft in danger. These are extreme examples and cases of air rage more commonly result in physical assaults on fellow passengers and crew such as throwing objects, punching, stabbing or scalding with hot coffee.

Complete the summary below. Write ONE WORD for each answer.

The first time that an **30**_____ of air rage was recorded was in the 1940's, but the passenger was never actually charged for an offence because there were no clear rules in place to specify where to prosecute. It was later **31**_____ that it would be the country where the plane is registered. Air rage has **32**_____ significantly since this time, growing by a staggering 400% from 1995 to 1998. Air rage is **33**_____ to be a major problem in the future as air travel increases, as do levels of aggression. Angry **34**_____ can put everyone in danger including the pilots, the crew and the other passengers, with some form of **35**_____ being the most common consequence.

MOCK TEST 1

35 answers

1 noises
2 scientists
3 fossil
4 voice
5 muscles
6 tweeting
7 D
