5 parts · 35 questions

⏱ 60 minutes

Vaqt: 60 daqiqa. Javoblarni javoblar varaqasiga o'tkazishni unutmang.

PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

EXPLORING SPACE

Space is a vast and mysterious place filled with wonders. Scientists have studied **Q1**_____ for many years to understand how the planets, stars, and other objects move and interact. Our planet Earth is just one of many **Q2**_____ that travel around the Sun.

At night, we can see many bright stars in the sky. These **Q3** _____ are huge balls of burning gas, and they are much farther away than the moon. The **Q4**_____ is Earth's closest neighbor in space, and it reflects the light of the Sun.

To study the moon, stars, and faraway planets, scientists use a tool called a telescope. A **Q5**_____ helps people see things that are very far away. It collects light and brings the image closer so we can learn more about objects in space. They enjoy learning about the movements of planets and how **Q6** _____ travels across space to reach our eyes.

PART 2

Questions 7–14

Read the texts 7-14 and the statements A-J. Decide which text matches with the situation described in the statements. Each statement can be used ONCE only. There are TWO extra statements which you do not need to use.

A) You are good at transport and need a full-time job

B) You are good at computer and want to work in an official job

C) You do not have experience and want to work as a customer service representative.

D) You need a job that influence people's minds and lives positively.

E) You are good at computer with long-term experience and want to work on appealing things.

F) You need a job that allows you work from the distance.

G) You need a job at school and want to work as a full time worker.

H) You want to work as an event coordinator.

I) You want to work for a company as an assistant manager.

J) You need a job that is associated with sales in one place.

7

We're looking for a kind and friendly person to join our bakery team. You'll take orders, answer phone calls, and make sure every customer has a great experience. You don't need any past experience, but you should love good food and enjoy helping people.

8

Are you good at social media and enjoy editing photos? We need someone creative to manage our online clothing store's social media pages. This is a freelance job you can do from home, and the hours are flexible. You must know how to use social media well and edit pictures professionally.

9

We're hiring a responsible and friendly driver to deliver food to people's homes. You need to have a clean driving record and a good attitude. This is a full-time job with good pay and benefits.

10

If you enjoy helping others and love books, this could be perfect for you! We're a busy bookstore looking for a part-time sales assistant. Your job will be to help customers find books, answer questions, and create a warm and welcoming space.

11

Our office is looking for someone organized and reliable to help with admin tasks. You'll answer phones, support different projects, and keep things running smoothly. You need to know Microsoft Office and have strong communication skills. This is a full-time role with benefits.

12

We need a talented graphic designer to create marketing materials for our small business. You must be good with Adobe Creative Suite and have a portfolio to show your work. It's a freelance position with flexible hours.

13

Do you love organizing events? We're searching for an energetic person to help plan and manage different events. You'll need great communication and organizational skills. This is a full-time job and offers room to grow within the company.

14

We're looking for someone caring and enthusiastic to support teaching children in a fun setting. Experience with kids is a plus but not required. It's a part-time job with flexible hours—and a chance to really make a difference in children's lives.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A taste of everything
B) Shop till you drop
C) City's tourist attractions
D) Ancient traditions live on
E) Activities for the adventurous and hardy
F) On the crossroads of religions
G) For the body, mind and soul
H) From the high peaks to the deep seas

15. Paragraph 15 **16. Paragraph 16** **17. Paragraph 17**
18. Paragraph 18 **19. Paragraph 19** **20. Paragraph 20**

DISCOVERING INDONESIA

15. Today Jakarta has much to offer, ranging from museums, art and antique markets, first class shopping to accommodations and a wide variety of cultural activities. Jakarta's most famous landmark, the National Monument or Monas is a 137m obelisk topped with a flame sculpture coated with 35 kg of gold. Among other places one can mention the National museum that holds an extensive collection of ethnographic artifacts and relics, the Maritime Museum that exhibits Indonesia's seafaring traditions, including models of sea going vessels.

16. Sumatra is a paradise for nature lovers, its national parks are the largest in the world, home to a variety of monkeys, tigers and elephants. Facing the open sea, the western coastline of Sumatra and the waters surrounding Nias Island have big waves that make them one of the best surfer's beaches in Indonesia. There are beautiful coral reefs that are ideal for diving. For those who prefer night dives, the waters of Riau Archipelago offer a rewarding experience with marine scavengers of the dark waters.

17. Various establishments offer professional pampering service with floral baths, body scrubs, aromatic oils, massages and meditation; rituals and treatments that use spices and aromatic herbs to promote physical and mental wellness. Various spa hotels are extremely popular. Indonesians believe that when treating the body you cure the mind.

18. Jakarta has a distinctly cosmopolitan flavor. Tantalize your taste buds with a gastronomic spree around the city's many eateries. Like French gourmet dining, exotic Asian cuisine, American fast food, stylish cafes, restaurants all compete to find a way into your heart through your stomach. The taste of Indonesia's many cultures can be found in almost any corner of the city: hot and spicy food from West Sumatra, sweet tastes of Dental Java, the tangy fish dishes of North Sulawesi.

19. In the face of constant exposure to modernization and foreign influences, the native people still faithfully cling to their culture and rituals. The pre-Hindu Bali Aga tribe still maintains their own traditions of architecture, pagan religion, dance and music, such as unique rituals of dances and gladiator-like battles between youths. On the island of Siberut native tribes have retained their Neolithic hunter-gathering culture.

20. Whether you are a serious spender or half hearted shopper, there is sure to be something for everybody in Jakarta. Catering to diverse tastes and pockets, the wide variety of things you can buy in Jakarta is mind boggling from the best of local handicrafts to haute couture labels. Modern super and hyper markets, multi-level shopping centers, retail and specialty shops, sell quality goods at a competitive price. Sidewalk bargains range from tropical blooms of vivid colors and scents in attractive bouquets to luscious fruits of the seasons.

PART 4

Questions 21–29

Read the following text for questions 21-29.

THE WORLD'S RICH NATIONS MISS A GOLDEN OPPORTUNITY

In a speech in October 2001, the British Prime Minister, Tony Blair, suggested that there would be a radical change of policy on Africa. "The current state of Africa", he said, "is a scar on the conscience of the world. But if the whole world focused on it, we could heal that scar. And if we don't focus on it, it will become deeper and angrier."

So I would like to ask Britain's prime minister to explain his actions at the G8 summit in France last week. A few weeks ago President Jacques Chirac did something amazing. After years of opposing any changes to European farm subsidies, he approached the US government to suggest that Europe would stop subsidising its exports of food to Africa if America did the same. This was an important offer, not only because it represented a significant change of policy for France, but also because it provided an opportunity for both the European Union and the US to abandon their constant attempts to offer higher agricultural subsidies than each other. As Blair has pointed out, the West's agricultural subsidies are a disaster for the developing world, and particularly for Africa. Farming accounts for some 70% of employment in Africa, and most of the farmers there are extremely poor. Part of the reason for this is that the prices of products grown by African farmers are unfairly undercut by the subsidised products dumped on their markets by exporters from the US and the EU.

So we might have expected Blair to have welcomed Chirac's initiative. Instead the prime minister single-handedly destroyed it. The reason is, of course, familiar. George Bush receives a great deal of political support from US agro-industrialists, grain exporters and pesticide manufacturers, and he was not prepared to match Chirac's offer. If the EU, and in particular the UK, had supported France, it would have been difficult for Bush to oppose the idea. But as soon as Blair made it clear that he would not support Chirac's plan, the initiative was dead.

So, thanks to Mr Blair and his habit of doing whatever Bush tells him to, Africa will continue to suffer. The basic problem is that the rich nations fix the global trade rules. The current world trade agreement was supposed to have prevented the EU and the US from subsidising their exports to developing nations. But the agreement contains so many loopholes that it permits the US and the EU simply to call their export subsidies by a different name.

The EU has stopped paying farmers for what they produce and started instead to give them direct grants, based on the amount of land they own and how much they produced there in the past. The US does the same and has also introduced some new

tricks. One of these is called "export credit": the state reduces the cost of US exports by providing cheap insurance for the exporters. These credits are worth some $7.7bn to US grain sellers. This money ensures that American exporters can undercut the world price for wheat and maize by between 10% and 16%, and the world price for cotton by 40%.

But the worst of its hidden export subsidies is its use of international aid as a means of entering the markets of poorer nations. Other countries give money and the World Food Programme can use this money to buy supplies in local markets, which helps local farmers at the same time as feeding starving people. The US, on the other hand, sends its own subsidised food instead of money, saying that this programme will "develop and expand commercial markets for US products".

For questions 21-24, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

21 According to the text, why did Jacques Chirac's proposal represent an important initiative?

A) It proposed to pay African farmers directly through subsidies.
B) It changed France's long-standing refusal to alter its farm subsidy policies.
C) It was the first time a US president agreed to abandon subsidies.
D) It offered additional compensation to help European farmers.

22 What does the text identify as the primary reason for the failure of Chirac's proposal at the G8 summit?

A) The European Union refused to hold talks with US agro-industrialists.
B) Tony Blair supported Chirac, but he couldn't convince other EU members.
C) Tony Blair did not back the plan, which made it easy for George Bush to reject it.
D) Other EU nations forced Tony Blair to give up on Chirac's plan.

23 How do the US and the EU allegedly bypass the rules against subsidizing exports?

A) They pay higher salaries to farmers who live abroad.
B) They introduce strict environmental regulations for farms.
C) They simply rename the payments and continue to subsidize.
D) They refuse to pay any subsidies in principle, but allow private organizations to do so.

24 According to the text, which of the following best describes the US approach to international food aid?

A) It sends money to the World Food Programme to buy local produce.
B) It invests heavily in local African farmers to improve their own production.
C) It sends its own subsidized food instead of money, to expand commercial markets for US products.
D) It has stopped all direct food donations and replaced them with private insurance credits.

For questions 25-29, decide if the following statements agree with the information given in the text. Mark your answers on the answer sheet.

25 Tony Blair claimed that Africa's problems will be solved without any cooperation from the US.

A) True
B) False
C) Not Given

26 Jacques Chirac had always been a supporter of reducing subsidies to farmers before this summit.

A) True
B) False
C) Not Given

27 Export subsidies from the US allow American sellers to reduce the world price of certain crops by 10% to 16%.

A) True
B) False
C) Not Given

28 The European Union's changes to its farming payments are still considered export subsidies by some critics.

A) True
B) False
C) Not Given

29 The text states that the US has the highest export subsidies in the world.

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

VOLCANOES

Volcanoes are among the most powerful and dramatic natural forces on Earth. They form when molten rock, ash, and gases escape from deep within the planet's crust through weak points or fractures. This molten material, known as magma, becomes lava once it erupts onto the surface. Volcanic activity has shaped the Earth's surface for millions of years, creating entire continents, islands, and mountain ranges. While often viewed as destructive, volcanoes are in fact fundamental to the planet's long-term geological and ecological evolution. The minerals released during eruptions contribute to soil formation, and the gases they emit play a role in regulating Earth's atmosphere. In this way, volcanoes are both builders and destroyers, highlighting the delicate balance between creation and collapse in the natural world.

Historically, volcanic eruptions have had profound consequences. The eruption of Mount Vesuvius in 79 AD buried the Roman cities of Pompeii and Herculaneum, preserving them in volcanic ash for future discovery. Krakatoa's 1883 explosion generated massive tsunamis and altered global weather patterns for years. More recently, the 2010 eruption of Iceland's Eyjafjallajökull disrupted international air travel, reminding the modern world that nature's forces remain far beyond our control. Volcanoes typically form along tectonic plate boundaries, where plates collide, pull apart, or slide past one another. The intense pressure and heat in these zones melt the mantle, forming magma. When this magma finds a path to the

surface, it results in an eruption. These eruptions can be gentle or violent, depending on the magma's composition, temperature, gas content, and viscosity.

There are several types of volcanoes, each with distinct features and eruption styles. Shield volcanoes, such as Mauna Loa in Hawaii, have wide bases and produce slow, fluid lava flows. Stratovolcanoes, including Mount Fuji and Mount Etna, are steep-sided and capable of highly explosive eruptions. Cinder cones are small, simple structures formed from ash and debris. Calderas, on the other hand, are large depressions formed after the collapse of a magma chamber following a massive eruption.

Despite their destructive potential, volcanoes offer numerous benefits. Volcanic ash is rich in minerals and contributes to the formation of extremely fertile soil, supporting agriculture in countries like Indonesia and Italy. Additionally, volcanic regions are often rich in geothermal energy, providing a sustainable source of electricity and heating. Volcanic rocks are used in construction, and unique volcanic landscapes fuel tourism, bringing economic advantages to local communities.

However, the hazards associated with volcanic eruptions are significant and should not be underestimated. Lava flows can destroy infrastructure and natural ecosystems. Ash clouds can collapse buildings, contaminate water supplies, and disrupt aviation. Toxic gases like sulfur dioxide and carbon monoxide pose serious health risks. Pyroclastic flows—fast-moving currents of hot gas and volcanic matter—are among the deadliest consequences of an eruption.

Modern science has made considerable progress in monitoring and forecasting volcanic activity. Seismographs detect ground vibrations caused by rising magma. Gas sensors analyze changes in volcanic emissions. Satellite imagery and thermal cameras help observe ground deformation and temperature increases. For example, a sudden increase in sulfur dioxide may indicate that magma is nearing the surface. Earthquakes often precede eruptions, and ground swelling can signal pressure building within the volcano.

For questions 30-33, fill in the missing information in the numbered spaces. Write no more than ONE WORD and / or A NUMBER for each question.

Rather than being entirely harmful, volcanoes contribute to the Earth's long-term development by releasing useful **30** _____.

Eyjafjallajökull's eruption in 2010 mainly affected **31** _____ transport on a global scale.

The type of eruption a volcano produces is determined partly by how much **32** _____ the magma contains.

Among the various types of volcanoes, **33** _____ volcanoes are known for their wide base and slow-flowing lava.

For questions 34-35, choose the correct answer A, B, C, or D. Mark your answers on the answer sheet.

34 What is one way scientists predict volcanic eruptions?

A) By examining historical eruption records
B) By measuring the mountain's height changes
C) By observing ground shaking and gas levels
D) By testing lava for chemical changes

35 What is the writer's main purpose in the passage?

A) To warn people about the dangers of volcanoes
B) To describe different types of volcanic rocks
C) To explain the origins and impact of volcanoes
D) To compare volcanoes in different regions of the world

MOCK TEST 56

35 answers

1 space
2 planets
3 stars
4 moon
5 telescope
6 light
7 C
8 F
9 A
10 J
11 B
12 E
13 H
14 D
15 C
16 E
17 G
18 A
19 D
20 B
21 B / It changed France's long-standing refusal to alter its farm subsidy policies.
22 C / Tony Blair did not back the plan, which made it easy for George Bush to reject it.
23 C / They simply rename the payments and continue to subsidize.
24 C / It sends its own subsidized food instead of money, to expand commercial markets for US products.
25 False
26 False
27 True
28 Not Given
29 Not Given
30 minerals
31 air
32 gas
33 shield
34 C / By observing ground shaking and gas levels
35 C / To explain the origins and impact of volcanoes
