PART 1

Questions 1–6

Read the text. Fill in each gap with ONE word. You must use a word which is somewhere in the rest of the text.

AIR CONDITIONING

At a Brooklyn printing plant, fluctuations in heat and moisture were causing the size of the printing paper to keep changing slightly, making it hard to align different colours. Carrier's invention made it possible to control temperature and humidity levels and so **Q1**_____ the colours. The **Q2**_____ also allowed industries such as film, processed food, textiles and pharmaceuticals to improve the quality of their products.

In 1914, the first air-conditioning device was installed in a private house. However, its size, similar to that of an early computer, meant it took up too much space to come into widespread use, and later models, such as the Weathermaker, which Carrier brought out in the 1920s, cost too much for most people. Cooling for human comfort, rather than industrial need, really took off when three air conditioners were **Q3**_____ in the J.L. Hudson Department Store in Detroit, Michigan. People crowded into the shop to experience the new invention. The fashion spread from department stores to cinemas, whose income rose steeply as a result of the **Q4**_____ they provided.

To start with, money-conscious employers regarded air conditioning as a luxury. They considered that if they were paying people to work, they should not be **Q5**_____ for them to be comfortable as well. So in the 1940s and '50s, the industry started putting out a different message about its product: according to their research, installing air conditioning increased productivity amongst employees. They found that typists **Q6**_____ their output by 24% when transferred from a regular office to a cooled one. Another study into office working conditions, which was carried out in the late '50s, showed that the majority of companies cited air conditioning as the single most important contributor to efficiency in offices.

PART 2

Questions 7–14

The people below all want to go to a restaurant for a celebration. Decide which restaurant would be the most suitable for each person.

7

You want to book a special family meal for your grandmother's 80th birthday. There will be a mix of ages so the menu needs to provide for a wide range of tastes. Your grandmother finds it difficult to hear so she doesn't want to take her anywhere which has loud music.

8

You want to book somewhere to celebrate your daughter's 18th birthday. You want to invite about 20 family members and close friends. You are looking for somewhere special that can offer a reasonably priced dinner. You'd like the atmosphere to be friendly and informal.

9

You want to celebrate your first wedding anniversary. You want to go to a first-class restaurant and don't mind how much it costs. You'd like somewhere that attracts famous people and for which your wife can put on her best dress.

10

You want to book a restaurant to celebrate the end of exams with a group of six friends. They don't want to spend much money but want to go somewhere with a lively atmosphere and interesting food.

11

You want to celebrate your son Danny's birthday by taking him to try some top-quality cooking by a well-known chef. Danny is studying restaurant management at college and wants to run his own high- class restaurant one day.

12

You and your friends ate in Spider-Man's Web last week. They would like to try another character restaurant this Thursday. They aren't keen on fish and can't afford anywhere expensive.

13

Your parents want to celebrate their summer wedding anniversary with the family next Tuesday. They hate being with other groups of people. The family normally orders steak, but you would like to try something different.

14

Your family always have lunch out on Sundays and love foreign food. On this occasion they'd prefer to book somewhere they can eat alone as a family, because you leave Sweden for a month on Monday.

A) Max's Café is a favourite venue with the stars for its amazing views across the river and excellent service, so you might find yourself on a table next to a well-known actor or politician. Prices are high but the perfectly-cooked, if slightly old-fashioned, food won't disappoint. Men must wear jackets and ties.

B) One of the cheapest pizza and pasta restaurants in town, JoJo's remains very popular with groups of students for its live music and reasonable prices. The menu hasn't changed in 20 years but when it comes to food, JoJo's customers are more interested in value for money than excitement.

C) Winner of the award for best service, Justin's is now offering a special menu for only £15 per person, giving people the chance to eat unusual food at affordable prices. The restaurant is always very busy and there's limited space for large groups. The staff are young and welcoming, although they are often in a hurry.

D) Relax in comfort at the Regent Hotel's new Terrace Restaurant, while a classical pianist plays softly in the background. Tables are well spaced, so customers can hold their conversations in private. The menu, although certainly not cheap and a little on the dull side, is varied and there's something to please everyone.

E) Sammy's is an excellent choice for those planning an event for a large group. Angela Hastings, former chef at the four-star Pink restaurant, specialises in good-quality simple food which is good value for money. Their aim is to please every type of customer. The staff make you feel very welcome. Live jazz most nights.

F) TV chef, Eliot Harris, has just opened his first restaurant, Bitter Sweet. Harris skilfully offers a mix of exciting and unusual ingredients, which those expecting more traditional food may find strange or even disgusting. A truly memorable experience for real food lovers. Book well in advance and expect to pay top of the range prices.

G) Enjoy amazing sunsets over the city from the 100th floor at the top of the Star Building as world-famous chef, Marco Louis, prepares food for all tastes. We have two private dining rooms for small groups. At Floor 100, expect top food for top prices! Open Monday to Saturday.

H) Discover the world of the ninja warrior in our restaurant which has been designed as a ninja castle. It's conveniently located inside the shopping centre with private rooms for small groups. Not cheap but you can enjoy Japanese fish or meat dishes. Closed all day Tuesday.

I) Don't expect great views here, as this restaurant is a hiding place for spies. You'll need the password to get into our large dining room where you will share long tables with other spies. Reasonable prices for a range of chicken, meat or fish dishes.

PART 3

Questions 15–20

Read the text and choose the correct heading for each paragraph from the list of headings below. There are more headings than paragraphs, so you will not use all of them. You cannot use any heading more than once.

List of Headings:

A religious or a secular celebration?
B) Halloween on the Gregorian calendar
C) Naughty children and spooky adults
D) Spread by immigrants and accepted by locals
E) The etymology of the name
F) Typically differing views on its origin
G) A global festival thanks to the US
H) Sugary, fruity treats
I) Ghosts, ghouls and pumpkins

15. Paragraph 1 **16. Paragraph 2** **17. Paragraph 3**
18. Paragraph 4 **19. Paragraph 5** **20. Paragraph 6**

THE HISTORY OF HALLOWEEN

1. The name Halloween or Hallowe'en dates to the mid 1700s and is of Christian origin. The word "Hallowe'en" means "hallowed evening" or "holy evening". It comes from a Scottish term for All Hallows' Eve (the evening before All Hallows' Day). In Scots, the word "eve" is even, and this is contracted to e'en or een. Over time, the name evolved into Hallowe'en. Although the phrase -All Hallows'" is found in Old English All Hallows' Eve" is itself not seen until 1556.

2. It is widely accepted that many Halloween traditions originated from ancient Celtic harvest festivals, particularly the Gaelic festival Samhain and therefore that the festival may have pagan roots. Some believe, however, that Halloween began solely as a Christian holiday, separate from ancient festivals like Samhain. Historian Nicholas Jones, exploring the origins of Halloween, notes that while "some folklorists have detected its origins in the Roman feast of Pomona, the goddess of fruits and seeds, or in the festival of the dead called Parentalia, it is more typically linked to the Celtic festival of Samhain, which comes from the Old Irish for 'summer's end'.

3. Halloween activities include trick-or-treating, costume parties, carving pumpkins into jack-o'-lanterns, bonfires, apple bobbing, divination games, playing pranks, visiting haunted attractions, telling scary stories, and watching horror films. In many parts of the world, the Christian religious observances of All Hallows' Eve, including attending church services and lighting candles on the graves of the dead, remain popular, although in the UK and USA it is now a more commercial and secular celebration.

4. Trick-or-treating is a traditional celebration for children on Halloween. They go in costume from house to house, asking for treats such as candy or sometimes money, with the question, "Trick or treat?". The word "trick" implies a 'threat" to perform mischief on the homeowners or their property if no treat is given. The practice is said to have roots in the medieval practice of mumming. Mumming, practiced in Germany, Scandinavia and other parts of Europe, involved masked persons in fancy dress who paraded the streets and entered houses to dance or play dice in silence.

5. Anglican and Catholic colonists in America recognized All Hallow's Eve in their church calendars, although the Puritans of

New England maintained strong opposition to the holiday, along with other traditional celebrations of the established Church, including Christmas. It was not until mass Irish and Scottish immigration in the 19th century that Halloween became a major holiday in North America. Confined to the immigrant communities during the mid-19th century, it was gradually assimilated into mainstream society and by the first decade of the 20th century it was being celebrated coast to coast by people of all social, racial and religious backgrounds.

6. On All Hallows' Eve, many Western Christian denominations encourage abstinence from meat giving rise to a variety of vegetarian foods associated with this day. Because in the Northern Hemisphere Halloween comes in the wake of the yearly apple harvest, toffee apple, caramel apples or taffy apples are common Halloween treats made by rolling whole apples in a sticky sugar syrup, sometimes followed by rolling them in nuts.

PART 4

Questions 21–29

Read the following text for questions 21-29.

PRESERVING BRITAIN'S CULTURAL HERITAGE: TO RESTORE A LEGENDARY THEATRICAL DRESS

An astonishingly intricate project is being undertaken to restore a legendary theatrical dress, Angela Wintle explains.

On December 28th, 1888, the curtain rose on a daring new stage revival of Shakespeare's Macbeth at the Lyceum Theatre in London. Topping the bill, playing Lady Macbeth, a main character in the play, was Ellen Terry. She was the greatest and most adored English actress of the age. But she didn't achieve this devotion through her acting ability alone. She knew the power of presentation and carefully cultivated her image. That first night was no exception. When she walked on stage for the famous banqueting scene, her appearance drew a collective gasp from the audience.

She was dressed in the most extraordinary clothes ever to have graced a British stage: a long, emerald and sea-green gown with tapering sleeves, surmounted by a velvet cloak, which glistened and sparkled eerily in the limelight. Yet this was no mere stage trickery. The effect had been achieved using hundreds of wings from beetles. The gown - later named the 'Beetlewing dress' became one of the most iconic and celebrated costumes of the age. Terry was every bit as remarkable as her costumes. At 31, she became a leading lady at the Lyceum Theatre and for two decades, she set about bringing culture to the masses.

The productions she worked on were extravagant and daring. Shakespeare's plays were staged alongside blood-and-thunder melodramas and their texts were ruthlessly cut. Some people were critical, but they missed the point. The innovations sold tickets and brought new audiences to see masterpieces that they would never otherwise have seen.

However, it was a painter who immortalised her. John Singer Sargent had been so struck by Terry's appearance at that first performance that he asked her to model for him, and his famous portrait of 1889, now at the Tate Gallery in London, showed her with a glint in her eye, holding a crown over her flame-red hair. But while the painting remains almost as fresh as the day it was painted, the years have not been so kind to the dress. Its delicate structure, combined with the cumulative effects of time, has meant it is now in an extremely fragile condition. Thus, two years ago, a fundraising project was launched by Britain's National Trust1 to pay for its conservation.

It turned to textile conservator Zenzie Tinker to do the job. Zenzie loves historical dress because of the link with the past. 'Working on costumes like the Beetlewing dress gives you a real sense of the people who wore them; you can see the sweat stains and wear marks. But it's quite unusual to know who actually wore a garment. That's the thing that makes the Beetlewing project so special.'

Before any of Zenzie's conservation work can begin, she and her team will conduct a thorough investigation to help determine what changes have been made to the dress and when. This will involve close examination of the dress for signs of damage and wear, and will be aided by comparing it with John Singer Sargent's painting and contemporary photographs. Then Zenzie and the National Trust will decide how far back to take the reconstruction, as some members feel that even the most recent changes are now part of the history of the dress.

The first stages in the actual restoration will involve delicate surface cleaning, using a small vacuum suction device. Once the level of reconstruction has been determined, the original crocheted2 overdress will be stitched onto a dyed net support before repairs begin. It's going to be extraordinarily difficult, because the original cloth is quite stretchy, so we've deliberately chosen net because that has a certain amount of flexibility in it too,' says Zenzie. When the dress is displayed, none of our work will be noticeable, but we'll retain all the evidence on the reverse so that future experts will be able to see exactly what we've done - and I'll produce a detailed report.'

Zenzie has estimated that the project, costing about £30,000, will require more than 700 hours' work. 'It will be a huge undertaking and I don't think the Trust has ever spent quite as much on a costume before,' she says. 'But this dress is unique. It's very unusual to see this level of workmanship on a theatrical costume, and it must have looked spectacular on stage.' If Terry was alive today, there's no doubt she would be delighted. Unlike many other actresses, she valued her costumes because she kept and reused them time and time again. 'I'd like to think she'd see our contribution as part of the ongoing history of the dress,' says Zenzie.

Choose the correct letter, A, B, C or D.

21 **What do you learn about Ellen Terry in the first paragraph?**

A) Lady Macbeth was her first leading role.
B) The Lyceum was her favourite theatre.
C) She tried hard to look good on stage.
D) She wanted to look young for her audience.

22 **What is the writer's purpose in paragraph 2?**

A) to describe different responses to the Beetlewing dress
B) to explain why the Beetlewing dress had such a big impact
C) to consider the suitability of the Beetlewing dress for the play
D) to compare the look of the Beetlewing dress on and off the stage

23 **According to the writer, the main effect of the Lyceum productions was to**

A) expose more people to Shakespeare's plays.
B) reduce the interest in other types of production.
C) raise the cost of going to the theatre.
D) encourage writers to produce more plays.

24 **In the fourth paragraph, what comparison does the writer make between Sargent's portrait and the Beetlewing dress?**

A) The dress has attracted more attention than the painting.
B) The dress is worth more money than the painting.
C) The painting took longer to produce.
D) The painting looks newer.

25 **Zenzie says the Beetlewing project is particularly special because**

A) the dress is very old.
B) people know who wore the dress.
C) the dress was designed by someone famous.
D) there is evidence that the dress has been used

26 **Which of the following is the most suitable title for the passage?**

A) A lesson from the past
B) A challenging task
C) An unusual fashion show
D) An unexpected discovery

Do the following statements agree with the views of the writer in the reading passage?

27 **The National Trust conducted useful research to assist Zenzie's plans for the dress.**

A) True
B) False
C) Not Given

28 **There will be some discussion over the changes that Zenzie's team should make to the dress.**

A) True
B) False
C) Not Given

29 **Zenzie's estimate for the timing of the project is realistic.**

A) True
B) False
C) Not Given

PART 5 Questions 30–35

Read the following text for questions 30-35.

RADIO AUTOMATION

Today they are everywhere. Production lines controlled by computers and operated by robots. There's no chatter of assembly workers, just the whirr and click of machines. In the mid-1940s, the workerless factory was still the stuff of science fiction. There were no computers to speak of and electronics was primitive. Yet hidden away in the English countryside was a highly automated production line called ECME, which could turn out 1500 radio receivers a day with almost no help from human hands.

John Sargrove, the visionary engineer who developed the technology, was way ahead of his time. For more than a decade, Sargrove had been trying to figure out how to make cheaper radios. Automating the manufacturing process would help. But radios didn't lend themselves to such methods: there were too many parts to fit together and too many wires to solder. Even a simple receiver might have 30 separate components and 80 hand- soldered connections. At every stage, things had to be tested and inspected. Making radios required highly skilled labour—and lots of it.

In 1944, Sargrove came up with the answer. His solution was to dispense with most of the fiddly bits by inventing a primitive chip—a slab of Bakelite with all the receiver's electrical components and connections embedded in it. This was something that could be made by machines, and he designed those too. At the end of the war, Sargrove built an automatic production line, which he called ECME (electronic circuit-making equipment), in a small factory in Effingham, Surrey.

An operator sat at one end of each ECME line, feeding in the plates. She didn't need much skill, only quick hands. From now on, everything was controlled by electronic swires and relays. First stop was the sandblaster, which roughened the surface of the plastic so that molten metal would stick to it. The plates were then cleaned to remove any traces of grit. The machine automatically checked that the surface was rough enough before sending the plate to the spraying section. There, eight nozzles rotated into position and sprayed molten zinc over both sides of the plate. Again, the nozzles only began to spray when a plate was in place. The plate whizzed on. The next stop was the milling machine, which ground away the surface layer of metal to leave the circuit and other components in the grooves and recesses. Now the plate was a composite of metal and plastic. It sped on to be lacquered and have its circuits tested. By the time it emerged from the end of the line, robot hands had fitted it with sockets to attach components such as valves and loudspeakers. When ECME was working flat out; the whole process took 20 seconds.

ECME was astonishingly advanced. Electronic eyes, photocells that generated a small current when a panel arrived, triggered each step in the operation, so avoiding excessive wear and tear on the machinery. The plates were automatically tested at each stage as they moved along the conveyor. And if more than two plates in succession were duds, the machines were automatically adjusted—or if necessary halted. In a conventional factory, workers would test faulty circuits and repair them. But Sargrove's assembly line produced circuits so cheaply they just threw away the faulty ones. Sargrove's circuit board was even more astonishing for the time. It predated the more familiar printed circuit, with wiring printed on a board, yet was more sophisticated. Its built-in components made it more like a modern chip.

When Sargrove unveiled his invention at a meeting of the British Institution of Radio Engineers in February 1947, the assembled engineers were impressed. So was the man from The Times. ECME, he reported the following day, "produces almost without human labour, a complete radio receiving set. This new method of production can be equally well applied to television and other forms of electronic apparatus.

The receivers had many advantages over their predecessors, wit components they were more robust. Robots didn't make the sorts of mistakes human assembly workers sometimes did. "Wiring mistakes just cannot happen," wrote Sargrove. No wires

also meant the radios were lighter and cheaper to ship abroad. And with no soldered wires to come unstuck, the radios were more reliable. Sargrove pointed out that the circuit boards didn't have to be flat. They could be curved, opening up the prospect of building the electronics into the cabinet of Bakelite radios.

Sargrove was all for introducing this type of automation to other products. It could be used to make more complex electronic equipment than radios, he argued. And even if only part of a manufacturing process were automated, the savings would be substantial. But while his invention was brilliant, his timing was bad. ECME was too advanced for its own good. It was only competitive on huge production runs because each new job meant retooling the machines. But disruption was frequent. Sophisticated as it was, ECME still depended on old- fashioned electromechanical relays and valves—which failed with monotonous regularity. The state of Britain's economy added to Sargrove's troubles. Production was dogged by power cuts and post-war shortages of materials. Sargrove's financial backers began to get cold feet.

There was another problem Sargrove hadn't foreseen. One of ECME's biggest advantages— the savings on the cost of labour—also accelerated its downfall. Sargrove's factory had two ECME production lines to produce the two circuits circuits needed for each radio. Between them these did what a thousand assembly workers would otherwise have done. Human hands were needed only to feed the raw material in at one end and plug the valves into their sockets and fit the loudspeakers at the other. After that, the only job left was to fit the pair of Bakelite panels into a radio cabinet and check that it worked.

Sargrove saw automation as the way to solve post-war labour shortages. With somewhat Utopian idealism, he imagined his new technology would free people from boring, repetitive jobs on the production line and allow them to do more interesting work. "Don't get the idea that we are out to rob people of their jobs," he told the Daily Mirror. "Our task is to liberate men and women from being slaves of machines."

The workers saw things differently. They viewed automation in the same light as the everlasting light bulb or the suit that never wears out—as a threat to people's livelihoods. If automation spread, they wouldn't be released to do more exciting jobs. They'd be released to join the dole queue. Financial backing for ECME fizzled out. The money dried up. And Britain lost its lead in a technology that would transform industry just a few years later.

Complete the following summary of the paragraphs of Reading Passage, using NO more than two words from the Reading Passage for each answer.

Sargrove had been dedicated to create a **30** _____ radio by automation of manufacture.

The old version of radio had a large number of independent **31** _____

After this innovation made, wireless-style radios became **32** _____ and inexpensive to export oversea.

As the Sargrove saw it, the real benefit of ECME's radio was that it reduced **33** _____ of manual work; which can be easily copied to other industries of manufacturing electronic devices.

Choose the correct letter A, B, C or D.

34 What were workers' attitude towards ECME Model initially

A) anxious
B) welcoming
C) boring
D) inspiring

35 What is the main idea of this passage?

A) approach to reduce the price of radio
B) a new generation of fully popular products and successful business
C) in application of die automation in the early stage
D) ECME technology can be applied in many product fields

MOCK TEST 65

35 answers

1 align
2 invention
3 installed
4 comfort
5 paying
6 increased
7 D
8 E
9 A
10 C
11 F
12 I
13 G
14 H
15 E
16 F
17 A
18 C
19 D
20 H
21 C / She tried hard to look good on stage.
22 B / to explain why the Beetlewing dress had such a big impact
23 A / expose more people to Shakespeare's plays.
24 D / The painting looks newer.
25 B / people know who wore the dress.
26 B / A challenging task
27 Not Given
28 True
29 Not Given
30 cheaper
31 components
32 lighter
33 cost
34 A / anxious
35 D / ECME technology can be applied in many product fields
